Testahil — Emirates Central Cooling Systems Corporation PJSC (DFM: EM

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

Revised 17-Aug-2026 after an external audit; see the critique-response note in the study.

What this workbook is. A transparent companion to the Empower valuation study. Every blue cell is a pasted input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN. Every figure that can be derived arithmetically from a pasted primary-record cell is a live formula: the modelling rates (per-RT revenue rates, the DEWA pass-through, capex per added RT, the depreciation rate, the working-capital ratio) are FORMULAS off the audited anchors on the Assumptions sheet; the cost of capital is built from the risk-free rate, beta and the premium; the revenue build multiplies per-refrigeration-ton rates by the connected-capacity path; and the income statement, balance sheet, cash flow, ratios, all four lenses, the recovery ladder, the bear and bull cases and the three cost-of-capital constructions all chain off the same cells.

EXACTLY TWO THINGS ARE PASTED VALUES, and it is worth knowing which:

1. AUDITED AND DISCLOSED HISTORY AND EXTERNAL FACTS — the FY2023-25 statement lines, the 30-Jun-2026 reviewed balance sheet, disclosed connected capacity, the consumption revenue from the auditor's key-audit-matter section, deck physical figures (1,174m RTh; 698 EFLH hours), the RD10 v1.3 tariff cap, peer marks and the committed dividend. Where a line is both disclosed and derivable, the workbook carries the DISCLOSED figure: the primary record is not a calculation. Each is pasted ONCE (on Assumptions wherever it drives the model).
2. WHOLE-MODEL SIMULATION OUTPUTS — the probabilistic price map and the 5x5 discount-rate x gr grid. Each such cell is a complete standalone solution, so it cannot be one formula. THESE DO NOT REDRAW WHEN A DRIVER IS CHANGED — everything else does, including the live recovery ladd bear, bull and the construction columns on the Sensitivity sheet.

CONVENTIONS ADOPTED 17-AUG-2026 (the external audit's accepted findings):

· THE CLOCK: the bridge and the cash-flow clock share the same 30-Jun-2026 date. FY2026 contributes only its second half (a half-year stub discounted at t=0.5); later year-ends sit at 1.5-4.5 years and the terminal discounts from t=4.5. The previous full-year convention double-counted H1-2026 cash already inside the June net debt.
· OPERATING EBITDA excludes BOTH the interest on the related-party acquisition receivables AND the rental income on investment properties. Both assets enter the EV-to-equity bridge at book (Note 8: 1,005.0 Dubai Aviation City + 289.4 Nakheel; investment properties 168.7), so counting their income in operating cash flow would double count. Earnings-based lenses keep both — they are real income. FY2025 identity: operating EBITDA + interest + rental = audited EBITDA.
· TWO-STAGE TERMINAL: FY2031-40 grows at the Dubai-2040 window rate, then a long-run perpetuity at a lower fade rate, each with return-consistent reinvestment.
· TWO MACRO FRAMINGS: recovery (de-escalation) and continuation are published side by side, like the two tax framings; neither is privileged as the single answer.

How revenue is built. Not as one growth rate. Consumption revenue is a per-RT rate times average connected refrigeration tons — decomposed further on the Segments sheet to connected RT x equivalent full-load hours x an AED-per-RTh tariff that sits 1.4% below the RD10 regulated cap. The FY2026 consumption shock (hospitality-occupancy-led ~80% per the company's H1-2026 attribution; weather a minor factor) and its recovery are explicit, separate drivers; capacity and connection revenue is its own per-RT rate on the same capacity path; pipes are carried flat. Costs escalate each on their own driver: DEWA electricity and water follows the consumption leg, wage-class lines follow the wage escalator, the receivable interest amortises.

What it is not. Not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges. The probabilistic price map is dispersion, not a forecast of value.

Sourcing. FY2023, FY2024 and FY2025 statement lines come from the company's own audited consolidate financial statements; the 30-Jun-2026 position from the reviewed interim statements; capacity and guidance from the company's H1-2026 earnings materials; the tariff cap from the Dubai regulator's published RD10 document. Every input on the Assumptions sheet carries its source and date in column H.

Currency. AED million unless stated. Spot AED 1.50 (07-Aug-2026 close). Sheets: READ FIRST · Summary · Fundamental Valuation · Assumptions · SOTP Bridge · Segments · Relative & Normalized · DCF Income Statement · Balance Sheet · Cash Flow · Summary Financials · Monte Carlo · Sensitivity · Per-Share & Ratios · Peer & Sector.

and the net-debt roll on the Balance Sheet carries it explicitly from the 30-Jun-2026 anchor.

Peer frame and sector context

One close listed peer exists; the parent is context, not a comparable. Cross-check inp

Company / frame	Market
Tabreed (National Central Cooling Co)	Dubai (DFM)
DEWA (parent, 80% owner)	Dubai (DFM)
Regional listed utilities	GCC

Peer figure	Peer
EV / EBITDA (Tabreed trailing, restruck at t	10.10x
Price / earnings (Tabreed trailing, restruck)	15.00x
Price / earnings (DEWA, trailing)	16.80x
Tabreed FY2025 revenue (AED mn, as report	2,456.0
Dividend yield at the market price	

Peer multiples are dated, disclosed cross-check inputs, restruck at the subject's own uts only, never a source for the company's own numbers.

Relevance
the only other listed GCC district-cooling pure play — the primary multiple cross-check
majority owner since Feb-2026; its multiple frames how Dubai prices regulated utility earnings
the broad frame for regulated-return infrastructure in pegged-currency markets

Empower (model)

15.10x
5.8%

07-Aug-2026 anchor (see the Assumptions sheet). On EV/EBITDA E

Caution

roughly 4.6x net debt / EBITDA against Empower's 1.8x, and a concession mix that skews the EV multiple

a vertically-integrated generation and distribution utility, not a district-cooling comparable

tariff regimes and concession structures differ materially by emirate and state

Tabreed FY2025 results — reported figure (some aggregators carry a rounded 2,460)

mpower trades at a PREMIUM to Tabreed (about 11.0x against 10.1x on audited-definition EBITDA) — v with less than half the leverage; on price/earnings it is roughly in line with Tabreed (15.1x again st 15.0x) and at a discount to DEWA (16.8x). The model's relative lens applies the peer multiple to Empc ower's own trailing operating EBITDA rather than endorsing either price.
