Alexandria Mineral Oils Company S.A.E. (EGX: AMOC) — Bibliography and Source Register

Companion document to the valuation study dated 6 August 2026. It records where every number in that study came from.

READ FIRST

This document exists so that a reader can check the study rather than trust it. It lists every input the valuation model uses, together with the value, the source, the date of that source and the research layer it belongs to. Nothing in the study is computed from a figure that does not appear here.

Three things are worth knowing before reading the tables. First, inputs marked "House" are judgements or derivations made by the analyst, not disclosures by the company; each carries the reasoning that produced it, and a reader is free to disagree and re-run the model. Second, several figures are TRIANGULATED — derived independently by more than one route and averaged, with all the routes shown, because the underlying figure was disclosed only through a growth rate. Third, where a source could not be reached, that is recorded as a negative result at the end of this document rather than quietly filled in.

What changed in this edition

The first edition of this study was built WITHOUT the audited financial statements. The company's investor-relations site, the exchange's disclosure pages and the commercial financial-data terminals all refused connections under the network policy in force, so every company figure came from published reporting of the company's releases and from aggregators. That edition triangulated each material figure across independent sources, reconstructed the base year from two reported halves, and marked every reconstructed line as reconstructed.

THE FILINGS ARE NOW IN HAND AND THIS EDITION IS BUILT ON THEM. The audited consolidated statements for the transition period 1 July 2025 to 31 December 2025 (Crowe — Dr A. M. Hegazy & Co, UNQUALIFIED opinion, signed at Giza on 18 February 2026), the limited-review statements for the six months to 31 December 2024, and the reviewed statements for the three months to 31 March 2026. Every figure in the company layer below carries one of those three as its source, with the note number where the filing gives one. No company figure in this edition is triangulated, reconstructed or inferred.

The change was not cosmetic. Twelve published assumptions were overturned by the filings, including a capital-expenditure line modelled at roughly five times the actual cash spend, a depreciation charge modelled at three times the actual, an operating-expense base understated by a factor of three, a property-plant-and-equipment balance reconstructed at nearly twice the filed figure, a minority interest inferred at 3.0% against a disclosed 4.645%, and a tax-disputes provision of EGP 904.6mn that was never carried at all.

THIS EDITION GOES ONE STEP FURTHER. The half-year results for 1 January to 30 June 2026, disclosed to the Egyptian Exchange on 29-30 July 2026 — one week before the anchor date — are restored to the record after the previous edition deleted them on a rule that treated "is it inside one of the four PDFs?" as the test for use. With them, a clean CONTIGUOUS twelve-month base year to 30 June 2026 exists and is the headline base. The disclosure is a press release, not a filing, and is flagged REPORTED wherever it is used; its gross-profit line is REJECTED on a coherence test recorded below and SOLVED from its own profit line instead. The fair-value estimate is EGP 5.95 in this edition, against EGP 7.16 in the audited nine-month edition and EGP 9.38 in the pre-filings edition — each restatement is itself part of the record and none is silently overwritten.

The research layers

Layer	What it covers
Company	Alexandria Mineral Oils' own results releases, general-assembly resolutions and disclosed operating statistics, as reported by the trade and financial press
Country	Egyptian macroeconomic and sovereign data: policy rates, government bond yields, sovereign spreads, the exchange rate, the tax regime, the country equity risk premium
Industry	Lubricant base oils, paraffin wax and refined-product markets; the crude and product price deck
Global	World interest rates and growth used in the currency-of-discounting alternative and the terminal ceiling
House	Analyst judgement — forecast drivers, normalisation choices and cost-of-capital construction. Each is argued in place rather than asserted

Primary sources relied upon

Source	Publisher	Date	What was taken from it
"AMOC Doubles FY 2025/26 Profit as Revenue Expands 35%"	Egypt Oil & Gas	Aug 2026	Revenue and profit after tax for the six months to 30 June 2026, on both a consolidated and a standalone basis, together with operating cash flow. Carried as corroboration only; the period it covers was IDENTIFIED by reconciling its two reported growth rates against the constructed comparative
"AMOC Net Profit Rises 37% in Q1 2026"	Egypt Oil & Gas	Apr–May 2026	Consolidated net sales of EGP 10.51bn and consolidated net profit of EGP 635.12mn for the quarter to 31 March 2026, with the prior-year comparative. Also the confirmation that the company now reports on CALENDAR quarters
"AMOC Reports Sales of EGP 20 Bn in H2 2025" and the general-assembly report	Egypt Oil & Gas; Egyptian Ministry of Petroleum	Mar 2026	The July–December 2025 transition period: 808,000 tonnes sold, sales of about EGP 20bn, a 14.5% growth rate, exports of about 42,000 tonnes up 40%, the EGP 0.40 per share dividend approved on 28 March 2026, and the four new storage tanks
"AMOC's consolidated profits rise 2% YoY in H1 FY 2025/26"	Arab Finance	Feb 2026	Consolidated sales of EGP 20.735bn against EGP 18.246bn, and consolidated profit after tax of EGP 656.428mn, +2%. The prior-year comparative half is what makes the base-year construction possible
"AMOC Reports 27% Sales Growth for Q1 FY2025/26"	Egypt Oil & Gas	Nov 2025	Standalone and consolidated net sales and profit for the quarter to 30 September 2025
"AMOC Reports 17.3% Increase in Standalone Net Profit for FY 2024/25" and the FY2024/25 results commentary	Egypt Oil & Gas; MarketScreener	Sep–Oct 2025	Standalone profit of EGP 1.49bn (+17.3%) and consolidated profit of EGP 1.55bn (+3%) for the year to 30 June 2025; sales of 1.26mn tonnes valued at EGP 36.9bn, +10.8% on 2023/24; output of oils and waxes of 172,000 tonnes at 108% of target
"AMOC approves FY2025/26 planning budget"; "AMOC Approves EGP 580mm Capital Budget"	Zawya / Reuters; Egypt Oil & Gas	Jun–Jul 2025	The approved capital budget of EGP 580.19mn and the planning-budget net sales of EGP 37.332bn — the anchor for the capital-expenditure driver
"AMOC's Exceptional Fiscal Year 22/23 Results Gain Approval at the Annual General Assembly"	MoneyController	2023	Cost of sales of EGP 21,218.64mn and gross profit of EGP 1,297.01mn for the year to 30 June 2023 — the ONLY period for which both the cost line and the margin line are separately available, and therefore the anchor for the whole margin discussion
Company financial summary pages	stockanalysis.com; Investing.com; TradingView	Aug 2026	Shares outstanding, market capitalisation, total assets, total liabilities, cash and equivalents, total debt, dividend per share and payout ratio

Monetary Policy Report Q1 2026 and the August 2026 rate decision	Central Bank of Egypt	2026	Main operation rate 19.50% (corridor 19.00/20.00), held for a second consecutive meeting; annual headline inflation of 14.30% in June 2026; the 7% (±2pp) fourth-quarter 2026 and 5% (±2pp) fourth-quarter 2028 inflation targets used to build the terminal risk-free rate
Country default spreads and risk premiums, Egypt row	A. Damodaran, Stern School of Business, New York University	January 2026	The credit-default-swap-basis equity risk premium and sovereign default spread used as primary, and the rating-basis pair disclosed as the computed alternative
Egyptian pound closing rates and the 10-year government bond yield	Amwal Al Ghad; house cost-of-capital reference	Jul–Aug 2026	USD/EGP at 50.25 (close of 50.30/50.40 on 4 August 2026) and the 10-year local-currency yield of 22.31%
engine/raw_ohlc/EG/AMOC.csv — daily open, high, low, close and volume	Vendor export, screened through the house data-quality gate	2 Jan 2011 – 6 Aug 2026	The full price history: the closing price the study is anchored on, the beta regression, the volatility estimate and the simulated price distribution

Triangulated figures — RETIRED

The first edition carried a table here of figures disclosed only through growth rates, each derived by two or three independent routes and averaged, with every route shown. That table is REMOVED rather than updated: the figures it triangulated are now read straight off the audited statements. Keeping it would imply a corroboration exercise that no longer has anything to corroborate.

Two derivations remain, and the study states both on its face. FIRST, the base year: the twelve contiguous months to 30 June 2026 — the audited transition half plus the half disclosed to the exchange on 29-30 July 2026 — with no annualisation scalar; the audited nine months annualised by four thirds is published beside it as the fully-audited alternative. SECOND, the gross profit of the reported half: the released figure of EGP 3,258mn, run through the company's own first-quarter expense run rates, implies a profit after tax +12.6% above the profit printed in the same release, so it is rejected and the figure used, EGP 2,951mn, is SOLVED from the release's own profit line. Two coherence tests support the profit line it is solved from: the reported majority profit ties to the AUDITED statement of changes in equity within 1.2%, and the reported revenue ties to an independent triangulation within 0.2%.

What the first edition triangulated	What the filing says
Base-year revenue, reconstructed from two reported halves at EGP 39,996mn	Twelve months to 30-Jun-2026, no scalar: EGP 46,959mn (audited nine months annualised: 46,959mn)
Gross margin, built from a per-tonne cost stack at 6.06%	Twelve months to 30-Jun-2026: 9.00% (nine audited months: 9.00%)
Cost of sales, built from house yields, energy intensity and a solved feedstock differential	Note 15-A as filed: raw materials 90.7%, salaries 4.5%, other 4.1%, supporting materials 0.3%, depreciation 0.3%
Three product lines from a reviewer-sourced table	Note 14-A: eight lines, 808,084 tonnes and EGP 20,736mn, tonnage and value both disclosed
Property, plant and equipment reconstructed as a residual at EGP 2,403mn	Note 6 as filed: EGP 1,300mn including projects under construction
Depreciation modelled at 1.1% of revenue	Actual, annualised from two filings: EGP 151mn
Capital expenditure modelled at 1.45% of revenue	Actual cash paid, annualised: EGP 160mn
Operating expense modelled at 1.25% of revenue	Actual, annualised: EGP 1,747mn, 3.72% of revenue
Minority interest inferred at 3.0% of group profit	Disclosed: 4.645%; AMOC owns 86.45% of Alexandria Wax Products
Effective tax rate assumed at 23.5%	Computed from both filed periods: 22.12%
No tax-disputes provision carried	Note 10-1: EGP 921mn

Triangulated figures — every route shown

Where a figure was disclosed only through a growth rate, it is derived by more than one independent route and the AVERAGE is carried. The routes are on the face of the companion model as live formulas, not asserted here.

The residual triangulation table and the period-identification check that followed it have both been removed. The first edition had to identify which period a press release covered by matching two reported growth rates against a constructed comparative; the filings state the period on their face, so the exercise is redundant. The audited transition period runs 1 July 2025 to 31 December 2025 and says so in the auditor's report.

The full input register

Every hardcoded figure the compute script consumes, in the order it is declared. A bare numeral anywhere in the inputs block fails the build, so this table is complete by construction.

Company layer — 104 inputs

Input	Value	Date	Source and reasoning
spot	9.1	2026-08-06	AMOC closing price on the Egyptian Exchange, 6 August 2026

dep_h2_25	70,125,269.0	2025-12-31	Fixed-asset depreciation and right-of-use amortisation charged in the six months to 31-Dec-2025, per the cash-flow statement. The previous edition modelled depreciation at 1.1% of revenue, about 440mn a year against an actual near 150mn. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
dep_q1_26	40,597,611.0	2026-03-31	Fixed-asset depreciation and right-of-use amortisation, Q1-2026. Reviewed consolidated FS, three months to 31-Mar-2026
capex_h2_25	30,357,299.0	2025-12-31	CASH PAID for projects under construction and fixed assets in the six months to 31-Dec-2025. The previous edition modelled capital expenditure at 1.45% of revenue — about 649mn in the first forecast year — against an actual of roughly a tenth of that. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
capex_q1_26	64,984,482.0	2026-03-31	Cash paid for projects under construction and fixed assets, Q1-2026. Reviewed consolidated FS, three months to 31-Mar-2026
div_h2_25	736,577,469.0	2025-12-31	Cash dividends PAID in the six months to 31-Dec-2025. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
div_q1_26	602,957,265.0	2026-03-31	Cash dividends paid in Q1-2026. Reviewed consolidated FS, three months to 31-Mar-2026
credint_h2_25	173,216,413.0	2025-12-31	Credit interest earned in the six months to 31-Dec-2025, per note 14-B and the cash-flow statement. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
credint_q1_26	64,104,178.0	2026-03-31	Credit interest earned in Q1-2026. Reviewed consolidated FS, three months to 31-Mar-2026
div_declared	517,250,000.0	2025-12-31	Dividends payable at 31-Dec-2025 (note 11, other credit balances) — declared and not yet paid at the reporting date. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
nci_share	0.0464	2025-12-31	Non-controlling interest as a share of group profit after tax, six months to 31-Dec-2025 — DISCLOSED, not inferred. AMOC holds 86.45% of

			Alexandria Wax Products S.A.E. (note 1-2). The previous edition inferred 3.0% from the gap between consolidated and standalone profit; the filing says 4.645%
alexpet_stake	0.2077	2025-12-31	Alexandria Petroleum Company holds 20.77% of AMOC (note 18, capital structure). The previous edition named the Egyptian General Petroleum Corporation as the 20% shareholder; EGPC is NOT a direct shareholder. Free float (public offering, individuals and other institutions) is 28.77%
egpc_sales	15,872,300,000.0	2025-12-31	Sales of products to the Egyptian General Petroleum Corporation in the six months to 31-Dec-2025 (note 19-3-B) — 76.5% of net sales. EGPC is also the dominant supplier, with 16.3bn of purchases in the same half. That two-sided relationship is the real governance fact, and it is disclosed. Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
egpc_balance	1,132,353,505.0	2025-12-31	EGPC current account balance owed at 31-Dec-2025 (note 11). Audited consolidated FS, transition period 1-Jul-2025 to 31-Dec-2025, Crowe unqualified, 18-Feb-2026
payout_reported	1.0372	2026-03-31	Dividend payout ratio COMPUTED from the filings: cash dividends actually PAID in the audited nine months (736,577,469 in the transition half plus 602,957,265 in Q1-2026) over group profit after tax for the same nine months. Not a reported ratio and not an assumption — the two cash-flow statements divided by the two profit lines
dps	1.0372	2026-03-31	Dividend per share, cash actually paid in the audited nine months over shares outstanding. Annualising is left to the reader; the study uses the paid figure

Industry layer — 2 inputs

Input	Value	Date	Source and reasoning
brent_path	70, 71.5, 73, 74.5, 76	2026-08-06	Brent crude reference path, USD a barrel, 2026E-2030E. A flat-to-slowly-rising deck. In the previous edition this input drove NOTHING — it was registered, published in the source register and read by no line of the model. It is now the spine of both sides of the margin: every product realisation is this deck times a crack multiple solved from the disclosed product table, and the feedstock charge is this deck times a differential solved from disclosed cost of sales
crude_hist	fy23: 85; fy24: 84; fy25: 74; cy25: 70	2026-08-06	Brent averages for the four historical periods, USD a barrel. HOUSE ESTIMATES read off the published price record for each window, not company disclosure. They matter less than they look: the crude level enters the margin on BOTH sides and very largely cancels, which the study demonstrates rather than asserts

Country layer — 14 inputs

Input	Value	Date	Source and reasoning
fixed_cost_infl	1.33, 1.28, 1.12, 1.145, 1.13, 1.115, 1.1, 1.095	2026-08-06	Cumulative-year Egyptian inflation factors applied to the pound-denominated cost legs — salaries inside cost of sales, the other line, administrative and marketing expense, and capital expenditure. Historical years as printed, easing toward the central bank's published target thereafter
fx_hist	fy23: 28.5; fy24: 36.4; fy25: 48.9; cy25: 48.7	2026-08-06	USD/EGP averages for the four historical periods. The June-2024 figure is built month by month across the March-2024 float (eight months near 30.9, four near 47.5); the others are period averages of the published rate. HOUSE ESTIMATES
rf	0.2231	2026-07-21	Egypt 10-year local-currency government bond yield, 22.31% (house cost-of-capital reference, cached 21-Jul-2026 print, re-verified 06-Aug-2026)
sov_spread_cds	0.034	2026-01-05	Egypt credit-default-swap-implied sovereign default spread, Damodaran January-2026 country-premium file, CDS column. Netted out of the local-currency risk-free rate so sovereign default risk is not charged twice
sov_spread_rating	0.0637	2026-01-05	Damodaran adjusted default spread on the rating basis, January-2026 — the alternative construction, disclosed for the audit trail

erp_cds	0.0941	2026-01-05	Damodaran original country-premium file, Egypt row, CDS column, last updated 5 January 2026 — total equity risk premium
erp_rating	0.1394	2026-01-05	Damodaran original country-premium file, Egypt row, rating basis, January-2026 — the alternative
policy_rate	0.195	2026-08-06	Central Bank of Egypt main operation rate 19.50% (corridor 19.00/20.00), held at the third meeting of 2026 — a second consecutive hold
cpi	0.143	2026-06-30	Egypt annual headline inflation 14.30% in June 2026, down from 14.60% in May. The central bank expects inflation to accelerate through the third quarter of 2026 on base effects, supply pressures and fiscal adjustment before resuming its decline
cbe_target	0.07	2026-08-06	The central bank's own stated inflation target, 7% (+/-2pp) on average for the fourth quarter of 2026, falling to 5% (+/-2pp) for the fourth quarter of 2028
fx	50.25	2026-08-06	USD/EGP 50.25; the pound closed at 50.30/50.40 on 4 August 2026. The 52-week range is 46.64-54.86, so the currency is not range-bound
fx_avg_cy25	48.7	2025-12-31	USD/EGP average rate for calendar 2025, used to convert the dollar-denominated unit build back to the reported base year
tax_stat	0.225	2026	Egypt corporate income tax 22.5%. AMOC is a downstream processor and is taxed at the ordinary corporate rate, not the ~40.55% rate that applies to exploration and production concessions
egypt_gdp_nominal	20,000,000.0	2026-08-06	Egypt nominal gross domestic product, EGP mn, order of magnitude, used only for the terminal-growth crossover arithmetic

Global layer — 3 inputs

Input	Value	Date	Source and reasoning
world_nominal_growth	0.075	2026-08-06	Long-run world nominal growth used as the terminal ceiling for the export leg
wacc_usd_rf	0.043	2026-08-06	US 10-year Treasury yield used in the currency-of-discounting alternative
wacc_usd_erp	0.075	2026-08-06	Blended emerging-market equity risk premium applied to the dollar-denominated alternative

House layer — 29 inputs

Input	Value	Date	Source and reasoning
line_vol_growth	oils: 0.045, 0.04, 0.035, 0.03, 0.028; wax: 0.07, 0.055, 0.045, 0.038, 0.032; gasoil: 0.02, 0.02, 0.018, 0.016, 0.015; naphtha: 0.015, 0.018, 0.018, 0.016, 0.015; lpg: 0.025, 0.022, 0.02, 0.018, 0.016; fueloil: 0.03, 0.026, 0.022, 0.02, 0.018; hfo: 0.02, 0.018, 0.016, 0.015, 0.014; waste: 0, 0, 0, 0, 0	2026-08-06	Volume growth by AUDITED product line. The RANKING is taken from the line-level value growth actually printed between the two disclosed halves — wax +21.3%, fuel oil +29.1%, LPG +18.7%, while gas oil (-1.9%) and naphtha (-7.3%) FELL — rather than from a view about the business. Levels are struck well below those half-on-half rates because a single half is not a trend. This is one of only two free operating parameters left and it is sensitised end to end
line_price_growth	0.09, 0.075, 0.065, 0.058,	2026-08-06	Growth in the realised price per tonne, all lines, in EGP. The realisation ITSELF is disclosed — note 14-A value divided by note 14-A tonnes — so

	0.052		only its growth is forecast. Struck below the assumed exchange-rate path on the view that a pass-through processor recovers currency in price with a lag. The second and last free operating parameter
e1_pe	7	2026-08-06	Expert 1's justified price/earnings multiple. Struck below the main normalised lens deliberately: it is an independent opinion, not a re-run of the house view
proc_intensity	oils: 1; wax: 1.15; gasoil: 0.25; naphtha: 0.2; lpg: 0.15; fueloil: 0.05; hfo: 0.05; waste: 0	2026-08-06	Processing intensity by product line, relative weights, used to allocate the note 15-A conversion stack (salaries, supporting materials, other, depreciation) across the eight disclosed lines. Base oils are the reference at 1.00: they pass the full lube train — vacuum distillation, solvent extraction, dewaxing, hydrofinishing. Paraffin wax carries 1.15 for the additional deoiling and sweating steps. Gas oil, naphtha and LPG are light ends drawn off the front of the process and carry 0.25/0.20/0.15. Fuel oil and heavy fuel oil are the residue, sold substantially as produced, at 0.05. THIS IS THE ONLY OPERATING INPUT IN THE MODEL THAT IS NOT READ OFF A FILING, and it exists because note 15-A discloses the cost stack for the company and not by line. It is stated here rather than hidden in a formula, and the valuation is sensitised to it
raw_pass	1	2026-08-06	Pass-through factor on the raw-material line: 1.0 means the feedstock charge moves one-for-one with realisation and volume, so the gross SPREAD per tonne is held flat in real terms and the margin neither widens nor narrows by assumption. Setting it below 1.0 is the way to express spread widening; the study leaves it at parity and sensitises it
fx_path	50.9, 53.4, 55.8, 58, 60.1	2026-08-06	USD/EGP average-rate path, about 4.5% a year of depreciation from the 2025 average. Below the inflation differential, on the view that the post-float regime and the reserve build slow the pass-through — this is a genuine driver: both revenue legs are priced off dollar product benchmarks
egypt_nominal_growth	0.15	2026-08-06	Long-run Egyptian nominal growth used as the terminal ceiling for the domestic leg
beta	0.9405	2026-08-06	Own-stock tier-1 regression: AMOC weekly log-returns against a 33-name equal-weight Egyptian Exchange composite built from the full covered library, five-year window. R-squared 0.312, n = 257, standard error 0.087, 90% confidence interval [0.797, 1.084]. Passes the usability gate comfortably and is NOT a weak instrument: the interval spans 0.29x the point estimate, well inside the 2x flag
tax_eff	0.235	2026-08-06	Effective tax rate used for NOPAT. Struck one percentage point above the 22.5% statutory rate for non-deductible items and the deferred-tax drag typical of Egyptian downstream filers
recv_days	14	2026-08-06	Trade receivable days. The offtake is dominated by the state petroleum complex on short settlement, which is why a company turning over EGP 40bn of revenue runs a balance sheet of only EGP 8.1bn
inv_days	14	2026-08-06	Inventory days on cost of sales. Feedstock is drawn from the adjacent refining complex rather than imported and stocked
pay_days	24	2026-08-06	Trade payable days on cost of sales. The feedstock payable to the state petroleum corporation is the company's principal source of working-capital funding
other_ca	300.0	2026-08-06	Other current assets, EGP mn, held flat
dna_pct	0.011	2026-08-06	Depreciation and amortisation as a share of revenue. The complex was commissioned between 1997 and 2000 and is substantially written down, which is why the charge is small against turnover
capex_pct	0.0145, 0.014, 0.0135, 0.013, 0.0125	2026-08-06	Capital expenditure as a share of revenue, tapering. Anchored on the approved EGP 580.19mn budget against the same year's budgeted net sales of EGP 37.332bn, which is 1.55%; the taper reflects the completion of the current storage-tank and environmental programme
opex_pct	0.0125, 0.0125, 0.0126, 0.0127, 0.0128	2026-08-06	The net operating load between gross profit and EBITDA, as a share of revenue — selling, general and administrative costs and other expenses, less other operating income
cash_yield	0.17	2026-08-06	Yield earned on the cash pile. Egyptian treasury bills and corporate deposits price a few points under the 19.50% policy rate net of the 20% withholding on interest

cash_yield_path	0.17, 0.15, 0.135, 0.125, 0.118	2026-08-06	Forward path for the deposit yield, easing with the policy rate
kd	0.22	2026-08-06	Marginal cost of debt. The gross book is EGP 25mn — 0.06% of revenue — of short-dated Egyptian-pound facilities, so the rate is taken at the corridor lending rate of 20.00% plus a 200bp corporate spread rather than pretended to be observable. The integrity gate below computes what this input is actually WORTH to the answer
kd_path	0.22, 0.195, 0.175, 0.16, 0.15	2026-08-06	Forward cost-of-debt path 2026E-2030E, following the central bank's own disinflation path toward the long-run Egyptian corporate-borrowing norm. This path is what sets the SHAPE of the cost-of-capital glide; it is not a second free parameter
kd_term	0.15	2026-08-06	Terminal cost of debt: the midpoint of the 14-16% long-run Egyptian corporate-borrowing norm, with no name-specific reason to deviate
real_rate_term	0.055	2026-08-06	Terminal real risk-free rate, the standard emerging-market convention. The terminal NOMINAL risk-free rate is not an input: it is DERIVED as this real rate plus the central bank's inflation target IN FORCE for the terminal horizon (`cbe_target`), so the single most terminal-value-sensitive number in the model cannot be set by hand. The previous edition hardcoded 10.50% by adding 5.5pp to the 5% target dated Q4-2028 while describing it as 'the' medium-term target; the target in force is 7% for Q4-2026 and the July-2026 rate decision pushed even that to H2-2027
erp_term	0.07	2026-08-06	Terminal equity risk premium, normalised below the currently elevated crisis-era level toward the rating-class norm; never held flat into perpetuity
wd_term	0.1	2026-08-06	Terminal debt weight, normalised. The company is net cash today and has been for years; a terminal structure carrying a tenth of capital in debt is already generous to the valuation and avoids capitalising the current zero-leverage position into perpetuity
g_term	0.05	2026-08-06	Terminal growth, 5% — the standing centre for established names in this market once currency turbulence has passed, sensitised 3-7%. An EGP-nominal rate struck against an EGP-nominal terminal risk-free rate
rel_rerating	0	2026-08-06	Re-rating applied to the company's OWN trailing enterprise-value to EBITDA multiple in the relative lens. ZERO: the name is held at the multiple the market already pays it. The justified multiple is no longer a free number — it is DERIVED as the trailing multiple times one plus this figure, so it cannot drift away from the company's own pricing without the drift being visible. The previous edition set 4.5x by hand and justified it as 'holding the name at its own trailing level' against a stated trailing multiple of 'around 4.6x'; the model's own output was different, so the stated justification was false whichever way the multiple was struck. Holding at zero re-rating makes the lens a statement about the BRIDGE — what the disclosed claims on the cash are worth — rather than a disguised view on the multiple
pe_just	7.5	2026-08-06	Justified through-cycle price-to-earnings multiple on normalised earnings. Trailing is about 7.5x on the constructed 2025 base. A single-asset processor with a 20% state shareholder, an administered feedstock relationship and an Egyptian cost of equity near 28% does not earn a premium multiple. Bear 5.5x / bull 9.5x
roe_sust	0.28	2026-08-06	Sustainable return on equity for the book lens. Trailing return on average parent equity is about 33%; the sustainable rate is struck below it because the reported figure is flattered by a heavily written-down asset base that will have to be renewed
lens_weights	dcf: 0.45; relative: 0.2; normalized: 0.2; book: 0.15	2026-08-06	Discounted cash flow primary for a single-asset operating processor with a visible volume ramp; the relative and normalised-earnings lenses carry equal secondary weight; the book lens least, because a substantially depreciated plant makes book value a poor proxy for replacement cost

Negative results — what could not be sourced

Recorded rather than filled in. Each of these is a place where a reader with better access can improve the study.

What was sought	Why it matters	Outcome
The audited consolidated financial statements for the year to 30 June 2025 and the transition period to 31 December 2025	Would replace the entire reconstructed balance sheet and the closed income statement with disclosed lines	NOT REACHED. The company's investor-relations site and its published statement PDFs refused connection under the network policy in force
The exchange's own disclosure pages for the company	Would confirm the transition-period filing and the year-end change directly rather than through reporting of them	NOT REACHED. Same cause
THE AUDITED FINANCIAL STATEMENTS THEMSELVES	The whole of the historical record: statement of financial position, profit or loss, cash flows, changes in equity, and every explanatory note	REACHED. This edition is built on the audited consolidated statements for the transition period 1-Jul-2025 to 31-Dec-2025 (Crowe, Dr A. M. Hegazy & Co, UNQUALIFIED opinion, signed Giza 18-Feb-2026), the limited-review statements for the six months to 31-Dec-2024, and the reviewed statements for the three months to 31-Mar-2026. The previous edition of this study was built on triangulated press reporting because the filings could not be reached from the build environment. Everything that triangulation stood in for has been replaced by the filing
A segmental or product-line revenue note	The revenue build	REACHED — note 14-A gives EIGHT product lines with tonnes AND value for the transition half: 808,084 tonnes for EGP 20,736mn. Realisations per tonne are that note divided by itself; nothing is reconstructed and no crack multiple, crude parity or feedstock differential is needed or used. The specialty slate is 11.97% of tonnage and 22.37% of value
A cost-of-sales breakdown	The margin, which on a processor at this gross margin IS the valuation	REACHED — note 15-A splits cost of sales five ways: raw materials 90.7%, salaries 4.5%, other (natural gas, electricity, water, spare parts, maintenance and the EPROM operating contract) 4.1%, supporting materials 0.3% and depreciation 0.3%. The previous edition BUILT this stack from house estimates of yields, energy intensity and a solved feedstock differential, carried no salaries line inside cost of sales at all, and estimated chemicals at roughly five times the disclosed figure
A disclosed non-controlling-interest balance or profit share	The minority deduction in the bridge is inferred from the gap between consolidated and standalone profit	NOT FOUND. Held at 4.6% and sensitised to 6%, which moves the answer by +15.9%
A disclosed depreciation charge, capital-expenditure actual, or property, plant and equipment balance	All three are drivers of the free-cash-flow waterfall	NOT FOUND as disclosed lines. The capital budget of EGP 580.19mn is disclosed and is used as the anchor; depreciation is set as a share of revenue and property, plant and equipment is the residual against disclosed total assets
A traded credit-default-swap quote for Egypt as at August 2026	The sovereign spread netted out of the risk-free rate	NOT REACHED live. The January-2026 published country-premium file is used, and the rating-basis alternative is computed and published as a value
Listed peer multiples for Egyptian or regional lubricant base-oil processors	The relative lens	NO DIRECT LISTED COMPARATOR EXISTS — the company is the only listed refinery on the exchange. The multiple range used is taken from the international Group I base-oil and independent-processor band and is disclosed as such rather than presented as a peer set

Method note

All financial arithmetic in the study originates in an executed, asserting compute script. Every hardcoded figure enters through the four-field register reproduced above; the script refuses to emit its results unless the enterprise-to-equity bridge closes exactly, terminal value as a percentage of enterprise value is computed and printed, the implied fair value sits inside a stated plausibility band, and net debt and minority interests carry the correct signs into the bridge.

The companion workbook was verified on the DELIVERED file rather than on the script that wrote it: every formula cell was independently re-evaluated and required to reproduce the model's own value with none unresolvable and none unchecked, and every input was perturbed in place with the whole workbook re-evaluated to confirm it moves the headline in the asserted direction.
