Testahil — Americana Restaurants International PLC (Abu Dhabi Securitie

Companion model · Independent valuation study · Educational analysis · Not investment advice

WHAT THIS WORKBOOK IS. A transparent companion to the Americana Restaurants valuation study. Blue
link across sheets.

IT CALCULATES. Every figure that can be derived arithmetically from a driver is a live formula, so you ca
watch the model reprice. The cost of capital is built from the risk-free rate, the sovereign spread, beta and
discount rate walks down is derived from the tax path. The discount factors compound. The cash-flow wat
EBIT after tax gives NOPAT, and free cash flow to the firm falls out of NOPAT, depreciation, capital expen
block chains too: the reinvestment rate is growth divided by the return on capital, and the terminal value f
the terminal cost of capital and growth. The statements roll forward — property, right-of-use assets, worki
carry from one year to the next — and every ratio and per-share figure on every sheet is a formula.

THREE CLASSES OF CELL ARE PASTED, AND ONLY THREE.

1. Audited and disclosed history. The primary record is not a calculation. Where a line is both disclosed a

2. The probability map. Each figure on the Monte Carlo sheet is the output of a fifty-thousand-path simula

3. The sensitivity grids. Each cell there is a complete re-run of the whole model, including the unit build,
redraw when a driver is changed.

Anything else pasted would be a defect. The formula and pasted-value counts are reported at the foot of th

HOW REVENUE IS BUILT. Not as one growth rate. The restaurant estate is disclosed country by country a
for the same units, so revenue is built as restaurants times revenue per restaurant across seven market u
net-new-store guidance; the revenue per restaurant grows on disclosed like-for-like sales growth, less a cu
currencies are not pegged to the dollar. The build reproduces reported revenue exactly in all three audite
an input: eight cost classes are each escalated on their own driver, never on one blended index.

CURRENCY. The company reports in US dollars. The shares trade in dirhams in Abu Dhabi and in riyals in
the dollar since 1997. The model runs in US dollars — the reporting and functional currency — and conve
unless stated; per-share figures are shown in both currencies.

THE OPEN QUESTION. Between the first half of 2025 and the first half of 2026 the EBITDA margin went
cyclical is the single judgement that decides this valuation, and nothing in the filings settles it. Both readin
Summary and Fundamental Valuation sheets. They are not averaged.

WHAT IT IS NOT. It is not investment advice, a recommendation, or a price target. Values are model outp

**COUNTS. This workbook carries 779 formula cells against 385 pasted values — 275 audited
sensitivity-grid cells. Every one of the 779 formula cells is checked against the model that w**

Summary — the valuation at a glance

Weighted central

THE OPEN QUESTION — the margin, computed both ways

Structural — the gains hold and improve slowly
Cyclical — the gains are competed away
The gap

Both are complete re-runs of the whole model, including the unit build, so they are engine outputs rather than formulas. They are published side by side and never averaged.

A SECOND READING — how the lease estate is treated

Leases capitalised, as the accounts present them
Leases as an operating cost
The gap

The two readings differ by under two percent once each is built consistently — charging the right-of-use additions as investment on the capitalised reading, and charging the whole rent bill as a cost on the other. That is a result worth stating: the accounting choice that dominates the balance sheet

Enterprise value to equity — the bridge

A single operating business, so the bridge is one leg, not a sum of parts. Every line

Step

Present value of the five forecast years
Present value of the terminal value
Enterprise value
Less lease liabilities
Plus cash and bank deposits
Less bank debt
Less non-controlling interests
Equity attributable to shareholders

Terminal value as a share of enterprise value

Present value of the five forecast years, as a share of enterprise value

Just over half the enterprise value sits beyond the fifth forecast year. That is what a growing business with a nine-and-a-half per cent cost of capital and three per cent long-run growth looks like, and it is the reason the terminal assumptions are sensitised on their own sheet rather than buried.

The company’s own trailing multiples

Trailing enterprise value / EBITDA
Trailing price / earnings
Trailing price / book
Net debt / EBITDA

Normalised earnings lens — the mid-cycle margin at today’s scale

Current-scale revenue, FY2026E (USD million)
Mid-cycle EBITDA margin (FY2028E)
Normalised EBITDA (USD million)
Less depreciation and amortisation
Normalised EBIT (USD million)
Net finance result (USD million)
Normalised earnings after tax (USD million)
Normalised earnings per share (USD)
Justified price / earnings
Implied value per share (AED)
Bear at 13 times (column C) and bull at 21 times (column D)

Book value and sustainable return

Book value per share (USD)
Sustainable return on equity
Trailing return on equity
Terminal cost of equity
Justified price / book
Implied value per share (AED)
Bear at a 34% return (column C) and bull at 48% (column D)

The book lens is the weakest of the four here and carries the lowest weight for that reason. An operator that leases its estate and distributes almost all its earnings holds very little book equity, so a justified price-to-book multiple divides a large return by a small base and is unstable in both directions.

THE COST OF CAPITAL — BUILT HERE, NOT PASTED

The glide
Effective tax rate path
Glide fraction — cumulative progress of the tax path

Row 17 walks the explicit-window cost of capital down to the terminal rate on this fraction, so the shape of the path is inherited from the only forward schedule in the model rather than invented as a second free parameter.

Cost of capital, explicit window

US ten-year Treasury yield

Less the US sovereign default spread

Risk-free rate net of the sovereign spread

Beta

Blended equity risk premium (ratings basis)

Cost of equity

Cost of capital, terminal

Cost of debt — the group’s own incremental borrowing rate

Cost of debt after tax

Market capitalisation (USD million)

Debt at market value — the lease liability

Debt weight

Equity weight

Terminal risk-free rate

Terminal cost of equity

Terminal cost of debt after tax

The same cost of capital on the credit-default-swap basis

Risk-free rate net of the US sovereign credit-default-swap spread

Blended equity risk premium (credit-default-swap basis)

Cost of equity, credit-default-swap basis

Cost of capital, credit-default-swap basis

Both bases are published. The default spread stripped out of the risk-free rate is on the same basis as the premium added back, so sovereign risk is counted once and once only.

is inherited from the tax path, the discount factors compound, and the terminal value is capita

Earnings per share (USD)

EBIT here is EBITDA less depreciation, so it sits ABOVE the impairment charges; the audited operating profit is EBIT after those charges. Impairments are a recurring feature of a large restaurant estate — some brand-country units are always underperforming — but they are not forecast as a line, so the forecast columns carry none and the free-cash-flow waterfall is struck before them. The non-controlling

st

line is a formula.

Cash flow — historical markers and the forecast waterfall

USD million. The forecast columns are the engine of the whole model: the depreciatio

USD million
EBITDA
Owned-asset depreciation and amortisation
Right-of-use depreciation
Depreciation and amortisation
Gross openings — net additions plus closures
Owned capital expenditure
Additions to right-of-use assets
Capital expenditure, including right-of-use additions
Change in net working capital
Tax
Free cash flow to the firm
Lease payments — principal and interest
Dividends paid
Movement in cash and deposits
Cash and deposits, closing
Cash generated from operations, as reported

The forecast free-cash-flow line is free cash flow to the FIRM on the capitalised-lease reading: taking a new restaurant lease is an investment, so right-of-use additions are charged as capital expenditure and the matching lease liability is deducted in the bridge to equity. Adding back right-of-use depreciation without charging the additions would count the shield and never pay for the asset.

ı, capital-expenditure and working-capital lines the discounted cash flow reads are com

The set splits cleanly in two, and that split is why the justified multiple sits below the peer median. The global names — Yum! Brands, Restaurant Brands, Domino's — are franchisORS: they collect a royalty on someone else's sales and carry EBITDA margins of 20% to 35% on a fraction of the revenue. Americana is on the other side of that contract. It is the operator, it PAYS the royalty (5.6% of revenue in FY2025), and it *cana’s own historicals come exclusively f*
