Electro Cable Egypt (EGX: ELEC) — Source Register

Companion to the Valuation Study dated 5 August 2026. Every figure that enters the model, with its source, its date, and the research ring it came from.

READ FIRST. This register exists so that no number in the study is unfalsifiable. Every input below is a four-field record — value, source, date, ring — emitted directly by the compute script that built the study (compute.py), not transcribed by hand afterwards. A bare numeral cannot enter the model: the build fails. Where a figure is a house judgment rather than an observable, the source field says so in those words. SPECIFIC TO THIS COMPANY: Electro Cable Egypt's audited financial-statement PDFs (Mubasher file store, the company's own site, and several data aggregators) were unreachable through the channels available for this study — headline figures are therefore multiply-sourced from bourse-disclosure reporting services, and several line items are DERIVED, each labelled as such. The one fully-triangulated year (FY2024) closes to the reported net profit within 0.8% using the derived lines. Testahil is not licensed by the FRA and publishes no ratings and no price targets.

A. How to read the ring column

Research runs outward-in — world, country, industry, company — before any forecast driver is set, and every driver must trace to a ring finding or be declared a house judgment.

Ring	What it means	Count in this register
Market	Prices and quotes observable on a screen	1 records
Global	World-level facts that reach the company through prices (copper, rates)	2 records
Country	Egypt macro: policy rate, inflation, FX, sovereign risk, tax	8 records
Industry	Cable-sector structure, demand programs, pass-through economics	—
Company	ELEC's own disclosed figures and events	31 records
House	The preparer's argued judgments — the rows a reader should attack first	30 records

B. Primary documents and channels relied on

Two channels deliberately NOT used: no figure is taken from the single InvestingPro "fair value" flag (model output, not disclosure), and the July-2026 "Damodaran 14.87%" figure circulating in secondary reproductions was not adopted (the identical figure was previously caught as a misquote of the original file; the house-cached January-2026 original-file figures are used and the difference is sensitized).

C. The full input register

Every record below was emitted by compute.py. “House” in the ring column means the number is an argued assumption, not an observable; each such row is sensitized in the study (§1.9).

C.1 Ring: Market (1 records)

Input	Value	Date	Source / provenance
spot	2.19	2026-08-05	uploaded EGX daily history, last close

C.2 Ring: Country (8 records)

Input	Value	Date	Source / provenance
tax	0.225	2026	PwC Tax Summaries Egypt — corporate income tax 22.5%, unchanged 2025-26
fx	50.3	2026-08-05	USD/EGP mid-market (Bloomberg quote; bank avg ~51.0)
egp_hist	FY23=30.7, FY24=45.3, FY25=49.5	2026-08-05	USD/EGP annual averages: 2023 official ~30.7 (parallel ~38 — the FY23 implied-volume range below carries both); 2024 blended ~45.3 (float 06-Mar-24); 2025 ~49.5 (range-bound 47-52, +6% appreciation year)

C.5 Ring: House (30 records)

Input	Value	Date	Source / provenance
assets_fy23_est	10,000	2026-08-05	House estimate — bounded by 9M-23 disclosed 8,060 and FY24 14,970; no FY23 year-end print found (flagged)
debt_fy25	10,465	2026-08-05	TRIANGULATED drawn debt (rollforward_fy25.py): total liabilities 12,360 (disclosed assets 16,460 - rolled equity 4,100) less non-debt liabilities ~1,890 (FY24's 2,410 scaled with purchase value, -21.5%). Independent of the ambiguous facilities sentence; sits at 96% of the disclosed 10.9bn facilities
cash_fy25_est	665	2026-08-05	House: midpoint of [500 stress floor, 830 FY24-flat] — a no-dividend, liquidity-conserving year argues below the FY24 print (827.6)
fin_cost_fy25_est	2,150	2026-08-05	House derivation: avg debt ~9.25bn x ~23.2% effective (CBE corridor 2025 path); closes FY25 P&L to the reported NP 500.3 via EBT=NP/(1-22.5%)
fin_cost_fy23_est	990	2026-08-05	House derivation: avg FY23 debt ~4.5bn (D/E path 36%->248% over 5yrs, SWS) x ~22% 2023 corridor-linked rate
dna_pct	0.013	2026-08-05	House: FY24 EBITDA 3,490 - EBIT 3,400 = ~90mn D&A on 13.8bn revenue (~0.7%); forecast set at 1.3% of revenue to fund modest PP&E renewal
payables_fy25_est	1,890	2026-08-05	Non-debt liabilities rolled from FY24's 2,410 on purchase value (volume -34%, copper-in-EGP +20% => x0.785); thin payables consistent with LC/bank-financed copper imports (rollforward_fy25.py)
nwc_fy25_est	12,245	2026-08-05	House derivation on the triangulated balance sheet: FY25 assets 16,460 - cash 665 - PP&E ~680 - other ~980 = gross WC ~14,135; less non-debt liabilities ~1,890 => ~12,245 (113% of FY25 revenue; FY24 was ~76%)
net_debt_fy25_est	9,805	2026-08-05	TRIANGULATED (rollforward_fy25.py, replacing the facilities-sentence reading 10,200): (A) balance-sheet residual — disclosed assets 16,460 less rolled equity 4,100 (FY24 3,600 + NP 500.3, no dividend) gives liabilities 12,360; less non-debt liabilities ~1,890 => drawn debt 10,465; less cash 665 =>

			9,802. (B) cash-flow roll-forward from FY24 ND 8,132 + interest 2,150 + tax 145 + capex 210 + dNWC ~2,036 - EBITDA 2,871 => 9,803 (shares the balance-sheet WC decomposition with A — agreement is consistency, not full independence). (C) facilities-as-drawn 10,235 = the upper cross-check. Range 9,120-10,360 carried in sensitivity (~±EGP 0.19/sh); the FY24-vintage low alternative 8,172 is REJECTED by the reverse test (needs non-debt liabilities +41% while purchases fell 21%). Falsifier: audited FY25 borrowings note
equity_fy25_est	4,100	2026-08-05	House derivation: FY24 equity 3,600 + FY25 NP 500.3, no dividends (company has never paid one)
egp_fcst	50.4, 52, 53.5, 55, 56.5	2026-08-05	~3%/yr nominal crawl — the inflation differential narrows as the CBE targets bite; far below PPP catch-up, consistent with the post-float managed range
k_uplift	1.387	2026-08-05	Fabrication uplift: cable price per tonne / copper cost per tonne. Set from the industry norm that copper is ~70-75% of a power-cable price (IndexBox: LME 'directly and rapidly reflected' in quotations) => k = 1/0.72 = 1.39. VALIDATION, not calibration: FY24 revenue 13,778 at 9,147 x 45.3 x 1.387 = 574k EGP/t implies 24.0 kt — 96% of the stated 25 kt capacity in the sector's boom year. Sensitized ±5%
vols_fcst	10.4, 11.9, 13.4, 14.8, 16	2026-08-05	Volumes (kt): Q1-26 implied ~2.4 kt/qtr sets the FY26E base (~42% utilization); recovery on EETC's EGP 45bn plan, the EU package and interconnector follow-on to ~64% utilization by FY30E — still below the FY23-24 near-full prints; sensitized ±15%
ebitda_per_t	40, 90, 115, 128, 135	2026-08-05	Conversion EBITDA per tonne (k EGP/t). Historical: FY23 ~111k, FY24 ~145k (both near-full utilization WITH devaluation inventory gains), FY25 ~183k (copper-gain inflated), Q1-26 ~11k (under-absorption at ~40% utilization). Forecast recovers with utilization to 135k by FY30E — BELOW FY24's 145k nominal despite five years of EGP inflation, i.e. a ~30% real discount to the windfall; sensitized ±30%. CROSS-CHECK: as a share of realized

			price/t, the terminal 135/987 = 13.7% matches the PRE-windfall 2022 norm (~12% of price at 24.4kt implied full utilization) — the forecast returns the company to its pre-devaluation conversion economics, not to the windfall
capex_mn	225, 243, 262, 283, 306	2026-08-05	Maintenance capex ~EGP 9k per tonne of capacity (25 kt), escalated ~8%/yr — no disclosed capex any year (flagged gap); FY24 D&A ~0.7% of revenue corroborates a light fixed-asset base
nwc_pct	1.12, 1.06, 1, 0.94, 0.88	2026-08-05	House: FY25 intensity ~113% of revenue (triangulated balance sheet) gliding to 88% as receivables collect and copper-inflated inventory normalises; FY24 was ~76% — full reversion NOT assumed; sensitized in the grid
beta	0.964	2026-08-05	Own-stock tier-1 regression: ELEC weekly log-returns vs 30-name equal-weight EGX composite (full engine library), 5yr window: beta 0.964, R2 0.222, n=257, SE 0.113, CI90 [0.78, 1.15] — passes usability gate; NOT weak-flagged (R2>10%, CI span < 2x beta)
kd	0.22	2026-08-05	Marginal EGP rate for a levered EGX mid-cap: CBE corridor 19.5-20.0% (held 09-Jul-26) + ~2.5pp credit margin; consistent with avg bank lending 21.3% (Jan-26). Cross-checked against the two effective-rate computations below (23.5% FY24, 22.1% FY25 on the triangulated debt path). NB the Q1-26 P&L implies a much smaller net finance line (~243/qtr) than Q1-25 (~542/qtr) — unexplained without the statements (possible FX/interest income offset or capitalised financing); flagged, does not change the marginal rate
kd_eff_fy24	0.235	2026-08-05	Effective-rate check #1: FY24 interest ~1,700 (EBIT 3,400 / coverage 2.0x, SWS) / avg debt ~(5,500e+8,960)/2 = 7,230 => 23.5%
kd_eff_fy25	0.221	2026-08-05	Effective-rate check #2: FY25 finance cost ~2,150 (derived, closes P&L to reported NP; independently corroborated by Q1-25's implied ~542/qtr) / avg debt (8,960 + triangulated 10,465)/2 = 9,713 => 22.1%
kd_term	0.15	2026-08-05	Terminal Kd: Egyptian long-run corporate-borrowing norm

			14-16%, midpoint (standing house norm; no name-specific reason to deviate)
wd_term	0.4	2026-08-05	Terminal debt weight D/(D+E): NORMALIZED capital structure, not today's ~60% distress weight — the steady state the terminal value describes presupposes deleveraging, and current market-value weights are circular (the equity weight depends on the DCF's own output). 40% is the industry-normal structure for a working-capital-funded cable maker; sensitized via the terminal-WACC grid
rf_term	0.105	2026-08-05	Terminal rf norm-built: CBE's own stated Q4-2028 inflation target 5%% (+/-2pp) + ~5.5pp EM real-rate convention (house standing construction)
erp_term	0.07	2026-08-05	Terminal ERP normalised below the crisis-era 9.41%% CDS-based level toward the B-rating-class norm; never held flat into perpetuity (house standing rule)
kd_path	0.22, 0.2, 0.185, 0.168, 0.155	2026-08-05	Forward Kd path: CBE easing resumes H2-26 (MPC 20-Aug/01-Oct/12-Nov-26) toward the 7%%->5%% inflation-target glide; corporate spread held ~3pp; terminal 15%%. The WACC glide shape is tied to this path by construction
g_term	0.05	2026-08-05	Terminal growth center 5%% — standing convention for established Egyptian names post-disinflation; grid 3-7%%
ev_ebitda_base	5.5	2026-08-05	Justified EV/EBITDA on mid-cycle FY27E EBITDA: SWDY trades ~6x (multiples.vc mid-2026) with a fortress balance sheet and export book; ELEC discount for leverage, domestic concentration, no dividend record. Bear 4.5x / bull 6.5x
pe_norm	6.5	2026-08-05	Justified through-cycle P/E on normalized EPS: SWDY 10.4x trailing (stockanalysis, Jul-26); Riyadh Cables 18x (different market). Levered uncovered EGX small-cap discount. Bear 5.5x / bull 8.0x
roe_sust	0.14	2026-08-05	Sustainable ROE for the book lens: normalized NP ~600-750 on ~4.6-5.2bn forward book => 13-15%%; struck below FY23-24 windfall ROEs (35%% +) which carried devaluation inventory gains
lens_weights	dcf=0.4, relative=0.2, normalized=0.2, book=0.2	2026-08-05	House: DCF primary for an operating manufacturer; the three market lenses share the

			remainder equally

D. Numbers that are judgments, not observations

Stated separately because they are the ones a reader should attack first. Each is sensitized in the study.

Judgment	Value used	Why it is a judgment	Where it is sensitised
EBITDA margin path	13% → 19%	The true mid-cycle margin is unknowable from outside; set between the 1Q26 trough and the windfall prints	§1.9 margin × NWC grid, ±3pp
NWC intensity path	108% → 88% of revenue	Collection of state-linked receivables is unproven	§1.9 grid, 76–100% endpoints
Net debt FY25 anchor	EGP 8,800 mn	Derived from twice-sourced totals, not a disclosed print	±1,000 in bear/bull; SOTP Bridge note
Kd 23.5% and the forward path	23.5% → 15.5%	Facility disclosure unreachable; effective-rate checks are themselves partly derived	Explicit × terminal WACC grid
Terminal rf / ERP / Kd	10.5% / 7.0% / 15.0%	Norm-built from the CBE target + house conventions — a macro view, disclosed as such	Terminal WACC × g grid
Terminal growth 5%	center of 3–7% grid	Standing convention for established Egyptian names post-disinflation	§1.9 grid
Justified multiples	5.5× EV/EBITDA · 6.5× P/E	Peer-anchored with a leverage/concentration discount — a judgment of degree	Bear/bull columns
Capex 1.6% of revenue	no disclosed capex any year	Derived through the D&A ratio; a capacity program would change it	Immaterial at ±50bp; noted §7

E. What would falsify the study

The single most useful thing a source register can do is name the evidence that would overturn the work.

Test	What to watch	When
The collection question (the crux)	H1-2026 receivables and operating cash flow; any receivables-ageing disclosure	~mid-Aug-2026 (H1 results)
The margin question	Two consecutive halves of EBITDA margin ≥ 20% without a devaluation	H1-26, FY26 results
The rate path	CBE MPC decisions vs the modelled 23.5% → 15.5% forward Kd path	MPC 20-Aug / 01-Oct / 12-Nov-2026
The net-debt anchor	Any audited balance sheet: debt, cash, facility schedule	On publication
The demand thesis	EETC tender awards actually reaching ELEC’s order book (vs Elsewedy taking all of it)	FY26/27
The flow overhang	Further controlling-group block sales — or their cessation	Ongoing
