EGYPTIAN CHEMICAL INDUSTRIES (KIMA) — EGX: EGCH — VALUA

WHAT THIS FILE IS

A live formula model of a single-site Egyptian nitrogen-fertilizer producer. Revenue is built product by pro
consumption times a unit price; the cost of capital, the discount-rate glide, the free-cash-flow waterfall, the
ratio are calculated in the sheet. Change a blue cell on Assumptions and the valuation recomputes.

BLUE IS AN INPUT. BLACK IS A FORMULA. GREEN IS A LINK TO ANOTHER SHEET.

THE THREE CLASSES OF PASTED CELL, AND THERE ARE NO OTHERS

1. AUDITED AND DISCLOSED HISTORY. The Income Statement, Balance Sheet and Cash Flow sheets car
audited statements for the years ended 30 June 2023, 2024 and 2025 and its reviewed nine-month accoun
derivable, the DISCLOSED figure is carried and the derivation sits beside it as a check.

2. THE UNIT BUILD'S OUTPUT. Production tonnages, the split of those tonnes between the subsidised, lo
price in each channel are the output of a reconciliation against the audited revenue note that would be un
Assumptions; everything downstream is a formula.

3. WHOLE-MODEL RE-RUNS AND SIMULATION OUTPUT. Every cell of the Sensitivity grid is a complete
Carlo sheet reports statistics of a fifty-thousand-path simulation. NEITHER REDRAWS WHEN A DRIVER C

THE CONTESTED JUDGEMENT IS CARRIED BOTH WAYS, NEVER AVERAGED

This company is building a nitric-acid and ammonium-nitrate complex whose bank-approved cost is about
that programme is carried through or stopped is worth more than three pounds a share — more than twic
report a number that is true in neither world, so both are computed and both are published: on Summary,
columns, and in the expert panel.

This is a valuation study. It is not a rating and not a price target: it reports a range of fair values and the distribution

SUMMARY — EVERY READ AT A GLANCE

Every figure here is a formula reading the valuation sheets. The contested judgement appears as two columns and is never

Lens	Programme carried through (EGP/share)	Programme stopped (EGP/share)
Cash flow — the primary lens	3.90	7.88
Book value and sustainable return	0.00	0.00
Relative multiples	15.99	15.99
Normalised earnings power	4.29	4.29

THE FIELD — the range of the published reads, never an average of ther

Low	3.90
High	15.99
Spread across the published reads	12.09
Spot price, 3 September 2026	14.41
Shares outstanding	1,986,578,999
Market capitalisation (EGP m)	28,627

THE CONTESTED JUDGEMENT — BOTH WAYS, NEVER AVERAGED

Is the ANNA capital programme carried through, or stopped?

Carried through (EGP/share)	3.90
Stopped (EGP/share)	7.88
The gap (EGP/share)	3.98
The gap (EGP m of equity)	7,915
Discount rate implied by the traded p	13.0%
Sovereign ten-year yield the same day	23.0%
Cost of capital built in this model, ye	25.76%
Cost of capital on the RATING premiu	26.88%

Both premium bases are published and neither is mixed with the other's risk-free rate.

Terminal value as a share of enterprise value is reported beside the cash-flow lens on the DCF sheet in both columns because this

THE ANSWER — TWO BRANCHES, PUBLISHED SIDE BY SIDE AND NEV

Cash-flow lens — ANNA programme	3.90
Against spot	-73.0%
Cash-flow lens — ANNA programme	7.88
Against spot	-45.3%
RETIRED — the 45/20/20/15 weighte	5.81
Why it is retired	the weights were typed and had never clea

The judgement is BINARY and its two answers straddle the interesting range, so an average wou

Against spot	What it measures
-73.0%	Free cash flow to the firm, discounted on a glided cost of capital
-100.0%	Book equity at the justified multiple implied by its own sustainable return
10.9%	Forward EBITDA at the mid-point of the Egyptian industrial range
-70.2%	Mid-cycle operating profit after tax at a justified multiple

n

ER AVERAGED

ared an out-of-sample test

ld describe a half-built plant — a world nobody is proposing and the company is not in. Both branches *s are published; neither is weighted into the other. Bear and full are the field's floor and ceiling.*

FUNDAMENTAL VALUATION — THE FOUR LENSES

The cash-flow lens is primary; the other three test it from directions it cannot test itself.

Lens 2 — book value and sustainable return	Value
Book equity, 31 March 2026 (EGP m)	16,206
Book value per share (EGP)	8.16
Underlying profit FY2023/24 (EGP m)	503
Underlying profit FY2024/25 (EGP m)	987
Opening equity FY2023/24 (EGP m)	7,250
Opening equity FY2024/25 (EGP m)	14,560
Return on equity FY2023/24	6.9%
Return on equity FY2024/25	6.8%
Sustainable return on equity	6.9%
Cost of equity	29.28%
Terminal growth	7.0%
Justified price-to-book, before flooring	-0.006
Justified price-to-book	0.00
Value per share on this lens (EGP)	0.00
Price-to-book the market pays	1.77

WHAT THE FOUR LENSES SAY TOGETHER

Lens	EGP per share
Cash flow — programme carried through	3.90
Cash flow — programme stopped	7.88
Book value, disclosed (a floor, never weighted)	8.16
Relative multiples	15.99
Normalised earnings power	4.29
The field, low to high	3.90

The two cash-flow readings are the contested judgement. They are the two sides of one question and are never averaged; the other three lenses are read against both. Note that the lens giving the highest number — relative multiples — is also the one that never asks what the capital programme does to cash, which is exactly

, ONE FIELD

Derivation
Paid-in capital plus reserves, as reported
Reported profit less the one-off investment-property revaluation gain
As reported
Prior-year closing equity
Prior-year closing equity
The two-year average on underlying profit
Built on the Assumptions sheet
The sustainable return does not cover even nominal maintenance growth, so this is NEGATIVE. That is the finding, not a rounding artefact.
Floored at zero
For comparison

Note

15.99

ASSUMPTIONS — THE LIVE DRIVERS

Blue cells are inputs. Change one and the model reprices. Each carries its source. Every value on this sheet comes from the study's input register.

Constructed: merchant nitric acid, the ferrosilicon plant's rent and services.

Constructed: merchant nitric acid, the ferrosilicon plant's rent and services.

Constructed: merchant nitric acid, the ferrosilicon plant's rent and services.

Constructed and FLAGGED: the statements give a single materials line and do not split gas from the rest. Gas is set at three quarters of that line, which implies 1,292 m3 per tonne of ammonia — inside the auditor's own disclosed 1,025 to 1,771 range. This is the largest modelled allocation in the study

Constructed: the company's own Q1 disclosure values 31,313,235 m3 of lost gas at EGP 251m, or EGP 8.016/m3, which converts to about US$4.68/mmBtu at the prevailing rate — below the US$5.75 contract price, which the study carries as its downside case

Constructed: standard gross calorific conversion

The FY2024/25 materials line less modelled gas, over urea output: packaging, catalysts and consumable spares

DERIVED from the single Egyptian inflation path this series uses for every Egyptian company it values (as of 2026-09-02), mapped onto this company's 30 June fiscal year end: each fiscal year takes half of each of the two calendar years it spans, and beyond the path's last published year its long-run rate. That path is 2026 16.0% / 2027 12.0% / 2028 9.0% / 2029 7.5% / 2030 7.0%. No number here is chosen for this study: a company cannot be valued in an economy the study beside it does not recognise, so no valuation in this series sets an inflation rate of its own. Until 3 September 2026 this array read 10.0 / 7.0 / 6.0 / 5.0 / 5.0 and ended at 5% while the same study already took 7% as the long-run rate.

That path is 2026 16.0% / 2027 12.0% / 2028 9.0% / 2029 7.5% / 2030 7.0%. No number here is chosen for this study: a company cannot be valued in an economy the study beside it does not recognise, so no valuation in this series sets an inflation rate of its own. Until 3 September 2026 this array read 10.0 / 7.0 / 6.0 / 5.0 / 5.0 and ended at 5% while the same study already took 7% as the long-run rate.

DERIVED from the single Egyptian inflation path this series uses for every Egyptian company it values (as of 2026-09-02), mapped onto this company's 30 June fiscal year end: each fiscal year takes half of each of the two calendar years it spans, and beyond the path's last published year its long-run rate. That path is 2026 16.0% / 2027 12.0% / 2028 9.0% / 2029 7.5% / 2030 7.0%. No number here is chosen for this study: a company cannot be valued in an economy the study beside it does not recognise, so no valuation in this series sets an inflation rate of its own. Until 3 September 2026 this array read 10.0 / 7.0 / 6.0 / 5.0 / 5.0 and ended at 5% while the same study already took 7% as the long-run rate.

Egypt ten-year government bond yield, market quote

Country risk premium workbook, original file, Egypt row, adjusted default spread

Country risk enters ONCE, through the premium below. Using the raw local yield with a country-loaded premium would charge Egypt's sovereign risk twice.

Country risk premium workbook, original file, Egypt row, rating basis total equity risk

Country risk premium workbook, original file, Egypt row, ten-year CDS spread

Country risk premium workbook, original file, Egypt row, equity risk premium based on the sovereign credit default swap. CORRECTED 9 August 2026: the study had 9.4247%, reconstructed from a 3.55% spread the file does not carry. Damodaran's Egypt row reads

Own-stock weekly regression, 253 observations over 4.9 years against the published EGX30 index (as of 2026-07-22), R-squared 0.250, standard error 0.191, 90% interval 0.72 to 1.34

Constructed: EGP 96,896,001 of interest on the EGP 500,000,000 holding-company facility drawn in FY2024/25 — the company's own latest local borrowing

Constructed: EGP 1,338.0m of FY2024/25 interest on a mean dollar balance of about

Constructed: the central bank's LONG-RUN 5% target against about 2.4% in the United States, on the same relative-purchasing-power identity the study states. CORRECTED 9 August 2026: the study previously asserted 4.5% flat while stating a derivation that produces a different number in every year. The wedge is now computed from the identity rather than asserted, and the currency path is built from it year by year

The pound tranche of the project loan was repaid in June 2024, so the book is almost entirely dollar

Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 5-16 income tax

Market-value equity over market-value equity plus debt

One less the equity weight

The inflation embedded in the TERMINAL discount rate, taken from the house macro path and NOT typed here — the SAME figure terminal growth is set at, so the two cannot drift apart. (This sentence previously described the value as 5%, the central bank's Q4-2028 target, while the path supplies 7%: a 7% value carrying a 5% justification, which is exactly the kind of unfalsifiable typed rate this series does not permit. The value has always come from the path; only the sentence was wrong.) CORRECTED 1 September 2026: the 08-08-2026 edition built the terminal risk-free rate on the 7% Q4-2026 target while growing the perpetuity at 5%, a perpetual real decline of about 2% a year that no disclosure supports (the same defect the

The house real-rate convention, used to build the terminal risk-free rate from its own components rather than from a spot yield

Constructed: long-run corporate dollar cost of debt

Terminal growth from the house macro path: terminal inflation plus a STATED real growth of zero, so the real assumption is written down rather than inferred from the gap to the discount rate. It was 5% (+/-2) for Q4 2028. CORRECTED 9 August 2026 after external critique: the study previously used the 7% Q4-2026 target, which expires one quarter after the anchor date, as a perpetuity anchor -- and then defended it by calling 5% 'below the target', inverting the central bank's own target structure. A perpetuity takes the longest-horizon target there is

DERIVED BY IDENTITY, labelled as derived: accumulated depreciation over the year's own charge. Under straight-line depreciation accumulated equals age times charge, so the ratio is the charge-weighted average age of the base. THE THREE CONDITIONS THAT BREAK THAT IDENTITY ARE CHECKED AND CLEAR HERE. There is no residual value: the policy note writes off cost over the useful life and mentions none. No useful life has been reassessed: the disclosed rates are unchanged from the prior year's identical table. And the base was not assembled by acquisition — it is one plant, built and extended by this company. The corroboration is that only EGP 220mn, 1.3% of the base, is fully depreciated and still in production, so almost nothing is past its accounting life and the gross-over-charge life below reads close to a true weighted life rather than a longer economic cycle. 4.45 years against the

DERIVED BY IDENTITY, labelled as derived: the depreciable gross cost — cost less land, which is never depreciated — over the year's own charge. It is the replacement cycle the accounts themselves run, and it sits inside the disclosed range: note 5-2 gives 3.95% on the urea and ammonia machinery (25.3 years), 9.5% on the factories (10.5), 6.5% on the workshops (15.4), 6% on the factory buildings (16.7), 2 to 5% on the residential city and the water and sewage pipes (20 to 50) and 4.75% on the intangible (21.1). A weighted life cannot be read off the note because it publishes no class balances, so the identity supplies one and

Constructed: escalation on the existing depreciation base, reflecting ordinary additions to the plant already in service

Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 5-2 depreciation rates

EPC award for this plant (Tecnimont S.p.A. with Orascom Construction, announced 9 June 2023): 600 t/day nitric acid converted to 800 t/day of fertilizer-grade granulated ammonium nitrate. FOUND BY EXTERNAL CRITIQUE 9 August 2026 -- the study had said 'no filing states it' and derived the plate from the ammonia surplus instead

Constructed: operating days a year for a continuous nitrate line, net of the turnaround the company takes annually

DERIVED: the steady-state currency depreciation the terminal inflation (5%) implies against long-run US inflation (2.4%) on the relative purchasing-power identity — the same wedge that carries the dollar debt in the terminal year. RE-SET 1 September 2026 from a typed 2.5% so that the terminal currency, the terminal cost of debt and the last explicit year share one

Case switch. Zero in the capital-discipline column, where the plant is never finished and therefore never depreciated.

Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 18-3 — bank-approved investment cost, agreement of 25 June 2025; dual-currency tranches at the approval rate

Maintenance capital expenditure as a share of revenue, RE-ANCHORED 9 August 2026 on the company's OWN pre-project cash-flow statements: EGP 123.3m spent across FY2021/22 and FY2022/23 on EGP 11,052.9m of revenue. The first issue of this study used a 3.0% mature-plant standard instead, which is 2.7 times what this company has ever spent to keep its plant running, and which no disclosure supports. The replacement-rate framing (gross fixed assets at the disclosed 3.95% machinery rate, 6.11% of revenue) is carried as the published

Constructed: capital-discipline case only: the cost of stopping the programme in the first forecast year — contract settlement and site preservation. No filing states it; it is the study's estimate and is flagged.

Constructed: ammonia per tonne of ammonium nitrate through the nitric-acid route plus direct neutralisation

EPC award for this plant (Tecnimont S.p.A. with Orascom Construction, announced 9 June 2023): 600 t/day nitric acid converted to 800 t/day of fertilizer-grade granulated ammonium nitrate. FOUND BY EXTERNAL CRITIQUE 9 August 2026 -- the study had said 'no filing states
The construction the study used before the engineering award was found. Retained as a cross-check on the disclosed plate, not as the plate itself.

Constructed: project utilisation in the terminal year, central case

Mid-cycle ammonium nitrate pricing

Constructed: conversion margin on ammonium nitrate over its own ammonia feedstock

Constructed: FY2024/25 receivables over revenue

Constructed: FY2024/25 inventory over cost of sales

Constructed: FY2024/25 payables over cost of sales

ENTERPRISE VALUE TO EQUITY — THE BRIDGE, E

This company has one operating business, so there are no parts to sum. What the bridge does carry is the non-operating stack and the net debt, and it carries them for

THE JUDGEMENT

Source
Five years of free cash flow to the firm, discounted on the glide
The perpetuity, capitalised at the terminal cost of capital
Reported because on this company it is the number that decides the answer
Gross debt less cash at 31 March 2026
Remaining holdings after the partial disposal in the first half
Carried at the revalued amount in the statements

SEGMENTS — THE UNIT BUILD, TONNES TIMES

The company reports one operating segment, so the build goes below it to the product and the channel, which is the finest level the statements source.

Tonnes and prices	FY2026/27
Urea production (tonnes)	524,861
Ammonia produced, capped at the design plate	325,356
Subsidised volume (tonnes)	155,000
Local free-market volume (tonnes)	40,000
Export volume (tonnes)	329,861
Export price net of duty (EGP/tonne)	26,440
Local free-market price (EGP/tonne)	26,440
Nitrate price (EGP/tonne)	22,625
Export revenue (EGP m)	8,722
Subsidised revenue (EGP m)	1,167
Local free-market revenue (EGP m)	1,058
Nitrate revenue (EGP m)	588
Other revenue (EGP m)	140
REVENUE (EGP m)	11,674
Gas price (EGP per m3)	9.16
Natural gas (EGP m)	3,850
Cumulative inflation index	1.140
Other materials (EGP m)	1,282
Wages (EGP m)	243
Purchased services (EGP m)	71
Depreciation and amortisation (EGP m)	891
COST OF SALES (EGP m)	6,337
GROSS PROFIT (EGP m)	5,337
Gross margin — an OUTPUT, never an input	45.7%
Inland freight to port (EGP m)	655
Other selling cost (EGP m)	201
Administrative (EGP m)	410
Stoppage and abnormal gas cost (EGP m)	150
EBIT (EGP m)	3,921
EBITDA (EGP m)	4,812
EBITDA margin — an OUTPUT	41.2%

Margins are outputs of the build, not inputs to it. Nothing on this sheet sets a margin; each one falls out of tonnes,

LENS 3 — RELATIVE MULTIPLES · LENS 4 — NOI

Two cross-checks on the cash-flow lens, each reaching the answer from a direction the cash-flow model cannot reach it from.

Relative multiples	Value
Forward EBITDA, FY2026/27 (EGP m)	4,812
Egyptian industrial range, low	6.0
Egyptian industrial range, high	9.9
Mid-point	8.0
Enterprise value at the mid-point (EGP m)	38,255
Less net debt (EGP m)	-10,032
Plus non-operating assets (EGP m)	3,538
Value per share on this lens (EGP)	15.99
At the low multiple (EGP)	11.26
At the high multiple (EGP)	20.71
Multiple the market pays	8.0
Multiple this model's cash-flow lens implies	3.0

This lens gives the highest of the four answers, and it is worth saying why: a multiple of forward EBITDA never asks what the capital programme does to cash. It values the plant as though the money being spent on the new complex were not being spent. That is exactly the question the cash-flow lens exists to

Normalised earnings power — every intermediate line	Value
Mid-cycle urea output (tonnes)	540,542
Export tonnes at mid-cycle	345,542
Mid-cycle export price (US$/tonne)	400
Exchange rate used	55.89
Export revenue (EGP m)	6,952
Other revenue legs (EGP m)	2,704
Mid-cycle revenue (EGP m)	9,657
Mid-cycle cash cost (EGP m)	6,829
Mid-cycle EBITDA (EGP m)	2,828
Mid-cycle operating profit after tax (EGP m)	1,502
Value per share at the central multiple (EGP)	4.29
At the low multiple (EGP)	2.78
At the high multiple (EGP)	5.80

RMALISED EARNINGS POWER

SENSITIVITY — WHOLE-MODEL RE-

PASTED CLASS 3. Each cell is a complete revaluation at that pair of inputs. THIS GRID DOES NOT REDRAW when a driver changes on Assumptions.

Value per share (EGP) — long-run export price

US$ 380/t long-run export price
US$ 420/t long-run export price
US$ 460/t long-run export price
US$ 500/t long-run export price
US$ 540/t long-run export price

The crux in observable units. Both inputs are observable rather than matters of opinion: the first prints daily on a listed futures contract, the second can be read against the sovereign's own borrowing cost. A reader who believes urea holds above US$540 for a decade, or that Egyptian equity risk clears below

THE CONTESTED CONSTRUCTIONS — one con

Choice made
Country risk priced off the sovereign's traded default swap
A cost of capital that glides from its spot build to a terminal rate made from its own long-run
Terminal growth at the central bank's medium-term inflation target
The cost of debt at the company's own disclosed rates — 19.4% on the local facility, 11.7% in dollars
Beta from the five-year weekly regression of the share against the published EGX30 index
Gas at the realised price the company's own loss disclosure implies
The new complex earning at half its derived nameplate in the terminal year
Maintenance capital expenditure at the company's own observed pre-project rate of 1.12% of revenue
Capital maintenance charged at what replacing the plant costs today, on the 4.45-year average age the
Project spending anchored on the observed run rate: the nine-month actual extended to a full year

Each row is a complete re-run of the model through the same case machinery with one component moved and everything else held. Column C is pasted class 3 and DOES NOT REDRAW; column D is a formula against the published answer

The subject's share of it	7.9%
Inland freight per export tonne (EC	1,742

The freight line is the difference that matters. A coastal producer does not

Location
Aswan, 1,000 km inland
Alexandria, coastal
Damietta, coastal
Helwan and Ain Sokhna

Why it matters here
The subject. The only Egyptian nitrogen producer off the coast, which is why freight to port is its own disclosed cost line.
The listed comparator, and the marketer of the subject's ammonia exports for a fee of 12% of the export price. The subject held 2.7% of it and began selling down.
Curtailed alongside the rest of the industry in the 2026 gas squeeze; the subject's own urea is warehoused at Damietta for export.
Completes the supply picture against which the export share is allocated.
