TALAAT MOUSTAFA GROUP HOLDING

Sources, inputs and judgements · 1 September 2026

This document lists every number the accompanying study uses, where it came from, when it was published and how reliable it is. It also lists what was looked for and not found, because an absence is a finding.

Primary documents

Document	Period it reports
TMG Holding 1H 2026 earnings release, Cairo, 12 August 2026, via https://talaatmoustafa.com/investor-relations/	2025-06-30
TMG Holding FY2024 earnings release, via https://talaatmoustafa.com/investor-relations/	2024-12-31
TMG Holding FY2025 earnings release, via https://talaatmoustafa.com/investor-relations/	2025-12-31
TMG Holding consolidated financial statements for the year ended 31 December 2023, via https://talaatmoustafa.com/investor-relations/	2023-12-31
TMG Holding consolidated financial statements for the year ended 31 December 2024, via https://talaatmoustafa.com/investor-relations/	2024-12-31
TMG Holding consolidated financial statements for the year ended 31 December 2025	2025-12-31
TMG Holding interim consolidated financial statements for the three and six months ended 30 June 2026	2026-06-30

Every one of these was downloaded from the company's own investor-relations page. The whole archive back to 2007 was read for this edition: 138 of the 140 documents sought were obtained, and the two that were not are dead links on the company's own site — the first-half 2009 and second-quarter 2017 results releases.

Country-level inputs

Input	Value	Source	Reliability
Egyptian ten-year government bond yield	23.00%	market quote dated 6 August 2026, cross-checked against a central-bank policy rate of 19.00%, an overnight lending rate of 20.00% and an interbank rate of 19.51% at the August 2026 meeting	C
Egypt's credit rating	Caa1	published country-premium file, Egypt's own row, read 1 September 2026	C
Egypt's adjusted default spread	6.37%	the same file	C
Egypt's country risk premium	9.71%	the same file	C
Equity risk premium, rating basis	13.94%	the same file	C
Equity risk premium, swap basis	9.41%	the same file	C
Statutory corporate tax rate	22.50%	the same file	C
Egyptian inflation, exchange rate, population	series, 2004–2025	World Bank development indicators, retrieved 1 September 2026	C
Beta against the exchange's published index	1.4718	TMGH's own weekly returns against the Egyptian Exchange's published index, 4.85 years to 2026-07-16, 251 observations	A
Last traded price	97.80	Egyptian Exchange close, 23 August 2026, from the same cleaned price history the probability distribution is fitted to	A

Code	What it means
A	the company's own audited or reviewed statements, or its own investor documents
B	an exchange or regulator filing
C	a named third party, used only for country-level inputs
DERIVED	recovered from the statement's own arithmetic

No country-level source is ever used for a figure about the company itself, and no competitor is ever a source for TMG's own reported numbers.

Judgements, and what would overturn each

Judgement	What was decided	What would overturn it
How fast the order book converts	not decided — the study publishes a slower reading of 14 years and a faster one of 10 years, and never averages them	a published delivery schedule by project
How the minority interest is deducted	at its share of value, proxied by the filed profit share (adopted); at book and pro rata shown beside it	a disclosure of TMG's economic share of each project company
Which equity risk premium to use	both, published side by side	nothing; the two measures are genuinely different questions
Whether to extrapolate the current sales rate	no. TMG sold about ten times what it delivered in 2025, and that is not a steady state; sales are held flat in real terms, not extrapolated	sustained sales at the current rate alongside deliveries rising to meet them
Whether to correct the finance-cost forecast	no. A correction passed every statistical test and was rejected because the reported charge is not interest on borrowings alone	a disclosure splitting interest on borrowings from the financing component of customer contracts
What margin to carry forward	the ratio from the reviewed first half of 2026, held flat. The margin is an output of that ratio and is never set directly	a structural change in the cost base with a measured direction in the company's own figures
Whether to build unit economics	no — the disclosure does not support it, and the study says so rather than inventing an average unit	disclosure of units and areas by project

What was looked for and not found

What	What is missing, and what would close it
unit economics	TMG publishes unit counts only occasionally (3,196 delivered in FY2025; 6,102 units sold in FY2022) and never as a continuous series, and publishes no average unit area, price per sqm or construction cost per sqm. Unit economics cannot be built without inventing them. WHAT WOULD CLOSE IT: a disclosure of units sold and delivered by project with average areas, as several regional peers publish.

What	What is missing, and what would close it
finance cost split	Finance cost is disclosed as finance expenses plus bank charges, with no split between interest on borrowings and the unwinding of the significant financing component on customer contracts. The implied 44% on opening interest-bearing debt is therefore not a borrowing rate. WHAT WOULD CLOSE IT: the split, or a disclosed weighted average borrowing rate.
segment capex	Capital expenditure is not disclosed by segment, so the hospitality build programme cannot be separated from the development one. WHAT WOULD CLOSE IT: a segment note carrying additions to fixed assets and assets under construction.
banan economics	The Saudi project's contract value, cost to complete and margin are not disclosed separately, only its share of segment revenue. WHAT WOULD CLOSE IT: a geographic segment note.
The company's own borrowing rate	no facility pricing appears in any statement or release held, so the cost of debt is built from the sovereign yield plus a stated spread and labelled as such
Competitors' financial statements	not sourced for this edition. A competitor multiple built on an unsourced denominator would be a number wearing a decimal point, so the relative lens is built on TMGH's own history instead and the competitor list carries prices only
Results releases for the first half of 2009 and the second quarter of 2017	linked from the company's own investor-relations page but returning errors; both attempts are logged rather than passed over in silence

Where two sources disagree

Figure	The disagreement	What this study does
2024 gross profit, net profit and earnings per share	the 2024 statements report EGP 15,300 million of gross profit and EGP 10,723 million of attributable profit; the 2025 statements restate the same year to EGP 14,002 million and EGP 9,025 million after completing the accounting for the hotel acquisition	uses the figures as first reported for the historical record and shows the restatement beside them; neither is discarded
2023 new contracted sales	the company reports both a total of EGP 142.8 billion and a core figure of EGP 94.9 billion, the difference being a large non-core land transaction	uses the total, consistently with every other year, and records the core figure beside it
The discount rate	the method used here gives 35.79%; the price the shares trade at implies 17.4% to 31.9%	publishes both and says plainly that the difference is the disagreement

How these numbers were checked

- Every statement was accepted only if it added up. The segment gross profits were checked against their own revenue and cost lines, their sum against the reported total, and the profit waterfall against the bottom line, for every year used. Where a figure did not add up it was dropped rather than adjusted.

- The 2025 balance sheet and the June 2026 balance sheet were checked to balance to the currency unit.
- Several of the company's older documents survive only as scans. Figures read from those were checked against the same figure quoted in a later document wherever one existed, and three fiscal years were left out of the historical record entirely because their tables could not be read reliably. Nothing was estimated to fill those years.
- The forecasting method was tested against the company's own record before being used on its future, and the results are reported in section 1.6 of the study — including the cases where the method performs worse than assuming last year's figure repeats.
