

Where every number came from. This register accompanies the valuation study and the companion model. Each input carries the source it was taken from, the type of that source, and the date the source itself bears — not the date it was read.

A limitation to state at the top

No source document was opened. That is a stronger statement than the usual caveat and it is the accurate one. The audited consolidated financial statements were not read; neither was the annual report, the FY2025 investor presentation, the exchange filing, nor even the press articles reporting them. Every attempt to retrieve a page — the company's own website, the exchange's disclosure portal, and eleven financial data and press hosts — was refused by the egress policy governing this environment, which returns a refusal at the connection stage rather than serving a page.

What WAS available was a web search tool returning synthesised summaries that quote figures from those pages, together with the daily price series supplied with the engagement. Every company figure in this register therefore reaches the model at one further remove than a citation normally implies: it is a figure as RELAYED in a search result about the reporting, not a figure read in the reporting, and certainly not one read in the audited print. The source names below identify where each figure ORIGINATES, which is genuine and worth recording; they do not claim the page was retrieved.

The consequence is stated rather than hidden. Revenue, attributable profit, operating income, the balance-sheet totals and both dividend distributions are carried as relayed from coverage of the company's exchange filings and from aggregations of commercial financial data — two steps removed from the audited print. Every line between them is DERIVED by closing the disclosed profit, and is labelled as derived wherever it appears. Section 3 lists each derivation and its method. A reader with access to the audited statements should re-run the model against them; the workbook is built so that changing an input reprices everything downstream, and that property is tested rather than asserted.

One disagreement between sources is carried openly rather than resolved. Total assets of EGP 8,783.72mn less reported equity of EGP 4,642.73mn implies total liabilities of EGP 4,140.99mn; a separate aggregation prints EGP 2,894.13mn for the same line. The figure that closes against total assets is the one carried, and the gap is shown on the balance sheet of the model rather than averaged away.

1 Input register — every figure in the model

#	Input	Value	Ring	Source	Source date
1	spot	59	Market	Closing price 06-Aug-2026 from the supplied EGX daily series (open 58.40, high 59.90, low 58.25, volume 1.34mn)	2026-08-06
2	af_share	0.52, 0.55, 0.58, 0.6, 0.62, 0.64	Company	Alternative-fuel substitution rate — the share of the thermal requirement met by refuse-derived fuel and biomass rather than petcoke or coal. This is the single most company-specific line in the model: the producer is Egypt's alternative-fuel leader and is targeting a 120,000-tonne annual emissions reduction through it	2026-01-01
3	cap_cement_mt	5	Company	Cement capacity. Two production lines in Suez governorate producing on average about five million tonnes of first-quality clinker and cement a year. Cross-check: the same disclosure puts the plant at about 6% of Egypt's nominal capacity, and 6% of 76Mt is 4.6Mt, so the nameplate is corroborated to within 9% by an independent route	2026-01-01
4	cap_clinker_mt	3.6	Company	Kiln clinker capacity. The PAIR with cement capacity OBSERVES the clinker factor rather than assuming it	2026-01-01
5	cash_fy25	3,459.39	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — cash and equivalents	2026-03-01
6	clinker_factor	0.72	Company	Tonnes of clinker per tonne of cement. Anchored on the capacity pair (3.60/5.00 = 0.720) but carried as an INDEPENDENT lever, because blending is a real operating decision: a lower factor means more cement per tonne of clinker and less fuel per tonne of cement. This company is pursuing exactly that, through supplementary cementitious materials, calcined clay and a 50%-slag CEM III product	2026-01-01
7	debt_fy25	1,035.19	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — total interest-bearing debt. The company is NET CASH by roughly EGP 2.42bn	2026-03-01
8	div_fy24_total	1,100	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2024 total cash distribution	2025-04-01
9	div_fy25_total	2,000	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2025 total cash distribution	2026-04-01
10	dps_fy24	2.94	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2024 dividend per share, EGP 1.10bn in total	2025-04-01
11	dps_fy25	5.34	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2025 dividend per share, EGP 2.00bn in total	2026-04-01
12	ebit_fy25	4,595.82	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — FY2025 operating income. This is the disclosed anchor the bottom-up cost stack is calibrated to reproduce	2026-03-01
13	ebitda_q4_25	1,393.01	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — fourth-quarter 2025 EBITDA. One of the three legs of the depreciation triangulation	2026-03-01
14	eps_fy24	3.02	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2024 disclosed earnings per share	2026-03-01
15	eps_fy25	9.49	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2025 disclosed earnings per share	2026-03-01
16	eq_fy25_rep	4,642.73	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — total equity as reported. A separate aggregation prints total liabilities of EGP 2,894.13mn, which does NOT close against this total-asset and equity pair; liabilities are therefore	2026-03-01

				DERIVED on the sheet as assets less equity and the disagreement is disclosed rather than averaged away	
17	gross_margin	0.4077	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — trailing gross margin. Used to derive cost of sales and, through it, the inventory leg of the property estimate	2026-03-01
18	pat_fy23	697.49	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2023 attributable profit, up from EGP 358.98mn in FY2022	2025-03-01
19	pat_fy24	1,160	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2024 attributable profit	2026-03-01
20	pat_fy25	3,599	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2025 attributable profit, +210.3%	2026-03-01
21	pat_q1_26	943.068	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — first-quarter 2026 attributable profit, from EGP 590.347mn, +59.74%	2026-05-12
22	rev_fy23	6,040	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2023 net sales, up from EGP 4.67bn in FY2022	2025-03-01
23	rev_fy24	8,729	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2024 net sales	2026-03-01
24	rev_fy25	12,447	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — FY2025 net sales, +42.58%	2026-03-01
25	rev_q1_25	2,554	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — first-quarter 2025 net sales	2025-05-12
26	rev_q1_26	2,995	Company	EGX filing reported by Mubasher Info, Arab Finance, Zawya and cemnet/International Cement Review — first-quarter 2026 net sales, from EGP 2.554bn	2026-05-12
27	rev_q4_25	3,645.6	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — fourth-quarter 2025 net sales	2026-03-01
28	shares_mn	374.87	Company	374.87mn shares in issue. Corroborated THREE ways and the corroboration is unusually clean: the FY2024 distribution of EGP 1.10bn at EGP 2.94 per share implies 374.15mn; the FY2025 distribution of EGP 2.00bn at EGP 5.34 per share implies 374.53mn; and the quoted share count is 374.87mn. All three agree to within 0.2%	2026-08-06
29	ta_fy25	8,783.72	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — total assets on the latest reported balance sheet	2026-03-01
30	tl_alt	2,894.13	Company	Balance-sheet and income-statement data from S&P Global Market Intelligence as carried by independent aggregations (stockanalysis.com, simplywall.st, investing.com), cross-read against each other — the alternative total-liabilities print. Carried only so the reader can see the size of the disagreement	2026-03-01
31	bagged_share	0.7	Industry	Bagged share of Egyptian despatches	2026-08-06
32	capex_usd_t_cap	4	Industry	Maintenance capital expenditure in US dollars per tonne of installed capacity. Set at the ECONOMIC level rather than at book depreciation: a historic-cost asset base in a currency that has devalued several times understates what it actually costs to keep a plant running, and charging book depreciation as capex would flatter free cash flow by construction. This is deliberately conservative	2026-08-06
33	dna_peer_egp_t	155	Industry	Peer depreciation per tonne of despatch — the disclosed FY2025 charge of a listed Egyptian cement comparator over its despatched volume. The second leg of the depreciation triangulation	2026-08-06
34	domestic_share	0.88, 0.88, 0.87, 0.86, 0.85, 0.84	Industry	Domestic share of despatches. Drifts down as export capacity competes for the same tonnes, within the 30% statutory export cap	2026-01-01
35	egy_capacity_mt	76	Industry	Egyptian nameplate cement capacity	2025-10-01

36	egy_cons_mt	54	Industry	Egyptian domestic cement consumption 2025	2025-10-01
37	egy_exports_mt	18.5	Industry	Egyptian cement and clinker exports 2025	2026-01-01
38	egy_prod_mt	65	Industry	Egyptian cement production 2025	2026-01-01
39	egy_revival_mt	12.6	Industry	Dormant Egyptian capacity under revival from the second half of 2026	2025-10-01
40	fuel_alt_usd_gj	1.8	Industry	Delivered alternative fuel. Refuse-derived fuel and biomass cost materially less per gigajoule than imported petcoke, which is the entire economic point of the substitution programme; set at 45% of the fossil price	2026-08-06
41	fuel_fossil_usd_gj	4	Industry	Delivered solid fossil fuel, petcoke or coal at roughly USD 128/t and about 32 GJ/t	2026-08-06
42	packaging_egg_t	55	Industry	Bag cost per tonne of bagged cement	2026-08-06
43	peer_mbsc_mcap	13,730	Industry	Misr Beni Suef Cement market capitalisation	2026-08-06
44	peer_mbsc_pat	3,946	Industry	Misr Beni Suef Cement FY2025 attributable profit	2026-03-01
45	peer_mbsc_rev	5,700	Industry	Misr Beni Suef Cement FY2025 net sales	2026-03-01
46	peer_scem_mcap	20,604.19	Industry	Sinai Cement market capitalisation at 06-Aug-2026	2026-08-06
47	peer_scem_pat	2,290	Industry	Sinai Cement FY2025 profit after tax	2026-03-10
48	peer_scem_rev	9,090	Industry	Sinai Cement FY2025 revenue	2026-03-10
49	power_kwh_t_cement	100	Industry	Specific electrical energy. Industry band 90-110 kWh per tonne of cement	2026-08-06
50	price_dom_egg_t	3,512, 3,600, 3,780, 3,950, 4,128, 4,293	Industry	Domestic realised price ex-works. The FY2025 figure is the level the DISCLOSED revenue implies given the volume build and the export split — it is a reconciliation, not an assumption. FY2026 is set at the EGP 3,600/t level the industry expects for 2026, and the path then grows at 4.0-5.0% a year, DELIBERATELY BELOW the assumed cost inflation, because the same decision that freed volume also removed the mechanism supporting price	2026-01-15
51	price_exp_usd_t	62, 60, 58.5, 57.5, 56.5, 55.5	Industry	Export price free on board, US dollars per tonne. Declining because the EU carbon border mechanism raises the landed cost of Egyptian cement in Europe; the decline is set shallower than a high-clinker peer would face, because this producer's alternative-fuel and low-clinker position is worth an estimated EUR 5.4/t of relief	2026-01-01
52	rawmat_egg_t	195	Industry	Quarrying, raw meal and additives per tonne of cement	2026-08-06
53	repl_usd_t	130	Industry	Replacement cost per annual tonne of cement capacity, USD 120-150 band	2026-08-06
54	thermal_gj_t_clinker	3.3	Industry	Specific thermal energy. Industry band 3.2-3.6 GJ per tonne of clinker for a dry preheater/precalciner kiln; set at the efficient end for a 2010-vintage plant	2026-08-06
55	cost_infl	1, 1.115, 1.226, 1.336, 1.443, 1.544	Country	Cumulative local cost-inflation index on the pound-denominated cost lines, from the FY2025 base. Steps of 11.5%, 10.0%, 9.0%, 8.0% and 7.0% track the disinflation path the central bank's own reporting describes	2026-07-10
56	egy_gdp_egg_bn	18,000	Country	Egyptian nominal gross domestic product, order of magnitude, used only for the terminal-growth crossover arithmetic	2026-01-01
57	egy_gdp_growth	0.18	Country	Egyptian nominal GDP growth used in the same crossover arithmetic	2026-01-01
58	erp_cds	0.0941	Country	Egypt equity risk premium, CDS-based, Damodaran January-2026: mature-market 4.23% plus 3.40% scaled by the relative equity/bond volatility ratio	2026-01-05
59	fx	50.3	Country	USD/EGP at the valuation date	2026-08-06
60	power_tariff	2.6	Country	Egyptian industrial electricity tariff, EGP per kWh, after phased subsidy reform	2026-08-06
61	rf	0.2231	Country	Egypt 10-year local-currency government bond yield	2026-07-21
62	sov_spread_cds	0.034	Country	Egypt CDS-implied sovereign default spread, Damodaran January-2026 country risk file, CDS column. NETTED OUT of the local risk-free rate so that sovereign default risk is charged once and not twice	2026-01-05

63	tax_stat	0.225	Country	Egypt statutory corporate income tax rate	2026-01-01
64	cash_yield	0.185, 0.16, 0.145, 0.135, 0.13	House	Yield earned on the cash balance across the forecast, easing with the policy rate	2026-08-06
65	cash_yield_fy25	0.21	House	Yield earned on cash through FY2025, against a policy rate held at 19.50% and bank deposit rates above it	2026-08-06
66	dep_rate	0.06	House	Composite depreciation rate on the net property base. The third leg of the triangulation	2026-08-06
67	distribution_egg_t	190	House	Outbound freight and selling per tonne. Set BELOW a typical Egyptian plant because the works sits on the Suez corridor, close both to the Cairo demand centre and to the port used for exports	2026-08-06
68	dna_pct	0.025, 0.028, 0.031, 0.034, 0.036	House	Depreciation as a share of revenue across the forecast. RISING, because capital spent from here is incurred at today's replacement cost and adds a far larger depreciable base per tonne than the legacy pre-devaluation book carries	2026-08-06
69	erp_term	0.07	House	Terminal equity risk premium, normalised below the currently elevated level rather than held flat into perpetuity	2026-08-06
70	ev_ebitda_just	4.5	House	Justified enterprise value to EBITDA on normalised earnings. Struck against a thin and internally inconsistent Egyptian peer set and disclosed as WEAKLY ANCHORED, which is why the relative lens carries a low weight	2026-08-06
71	ev_t_just	95	House	Justified enterprise value per annual tonne of capacity. Set well below replacement cost because a market carrying 76Mt of capacity against 54Mt of consumption does not pay replacement cost	2026-08-06
72	fixed_usd_t_capacity	15.7583	House	Fixed cash cost per tonne of INSTALLED capacity, so it does not vanish when volume falls. Industry band USD 10-20. This is the level the FY2025 reconciliation implies against an independently built variable stack — reported as a calibration, not solved away and presented as an observation	2026-08-06
73	fx_path	49.3, 50.6, 53.1, 55.8, 58.6, 61.5	House	USD/EGP path, FY2025 average then FY2026E-FY2030E. Raises the pound cost of imported fuel AND the pound value of export revenue; the two legs partly offset, which is why this is one driver and not two	2026-08-06
74	g_term	0.05	House	Terminal growth. The house default for an established emerging-market industrial once currency turbulence has passed, against a terminal risk-free rate that already embeds disinflation — so approximately zero in real terms	2026-08-06
75	inv_days	60	House	Inventory days on cost of sales, used only to size the property base in the third leg of the depreciation triangulation	2026-08-06
76	kd	0.215	House	Marginal pre-tax cost of debt. The central bank's main operation rate is 19.50% and Egyptian corporate borrowing prices above it; 21.5% is the level a well-banked industrial pays. See the cost-of-debt integrity section: the company is NET CASH and gross debt is 4.5% of the capital base, so a 700 basis point error in this input moves the blended rate by about 31 basis points	2026-08-06
77	kd_path	0.215, 0.19, 0.17, 0.158, 0.15	House	Cost-of-debt path across the forecast. The discount-rate glide inherits its SHAPE from this path rather than from a second, independent judgement	2026-08-06
78	kd_term	0.15	House	Terminal cost of debt — the Egyptian long-run corporate borrowing norm of 14-16%, midpoint	2026-08-06
79	kiln_util	0.72, 0.768, 0.79, 0.805, 0.815, 0.822	House	Kiln utilisation, FY2025A then FY2026E-FY2030E. The FY2026 step is the first full year without the production quota abolished in May 2025, and is corroborated by first-quarter 2026 revenue growth of 17.3% against a roughly flat price. The path then flattens as 12.6Mt of dormant national capacity restarts	2026-08-06
80	nci	150	House	Non-controlling interests deducted in the enterprise-to-equity bridge. No minority-interest balance is separately retrievable. The size is inferred from the profit statements: disclosed FY2025 earnings per share of EGP 9.49 on 374.87mn shares gives EGP 3,557mn against a stated attributable profit of EGP 3,599mn, a gap of about 1.2% which is consistent with the statutory employees' and directors' profit share rather than with a large minority. Set at a deliberately non-trivial EGP 150mn and SENSITISED	2026-08-06
81	norm_mgn	0.308	House	Mid-cycle EBITDA margin: the midpoint of the FY2024 outturn and the FY2025 peak, both	2026-08-06

				reconstructed by the same method. It lands close to the FY2030 forecast margin, which is a check on the forecast rather than a coincidence	
82	norm_rev_haircut	0.94	House	Haircut to the FY2025 revenue base for the normalised lens. Applying a mid-cycle MARGIN to a PEAK revenue base would be half a normalisation in the one lens whose purpose is refusing to capitalise a peak	2026-08-06
83	payout	0.56	House	Dividend payout ratio from FY2026E, held at the FY2025 outturn of EGP 2.00bn on EGP 3.599bn of attributable profit	2026-08-06
84	pe_just	7	House	Justified price to earnings on normalised OPERATING earnings, cash excluded and added back at face	2026-08-06
85	recv_days	30	House	Receivable days on revenue, used only to size the property base in the third leg of the depreciation triangulation	2026-08-06
86	rf_term	0.125	House	Terminal risk-free rate, NORM-BUILT from the central bank's own stated medium-term inflation target of 7% plus a standard emerging-market real-rate convention of about 5.5 percentage points. Deliberately not a historical average, and never reverse-engineered from a price	2026-08-06
87	stub_years	0.583	House	Elapsed fraction of FY2026 at the valuation date — seven of twelve months. The elapsed part is rolled into the opening cash balance and the unearned part is discounted, so the period is counted exactly once	2026-08-06
88	util_fy23	0.66	House	FY2023 kiln utilisation under the production quota	2026-08-06
89	util_fy24	0.684	House	FY2024 kiln utilisation under the production quota. The pair with FY2025 reproduces the DISCLOSED +42.6% revenue step as a +5.3% volume step on a +35.5% price step, which is the cross-check that the quota abolition worked mainly through price and not mainly through volume	2026-08-06
90	w_asset	0.08	House	Weight, asset lens. Deliberately small: restarting a mothballed line costs a fraction of building one, and 12.6Mt of restart capacity is queuing, so replacement cost is a ceiling and not a floor	2026-08-06
91	w_dcf	0.5	House	Weight, cash-flow lens. The highest weight because it is the only lens that prices the specific thing this company is: a fixed asset with a known cost stack in a market whose supply is about to expand	2026-08-06
92	w_norm	0.22	House	Weight, normalised-earnings lens	2026-08-06
93	w_rel	0.2	House	Weight, relative lens. Held down because the Egyptian peer set is thin and its published multiples do not reconcile	2026-08-06
94	wc_pct_drev	0.12	House	Change in working capital over change in revenue	2026-08-06
95	wd_term	0.2	House	Terminal debt weight. The company is net cash today; the terminal state assumes a normalised, modestly geared balance sheet	2026-08-06

2 Source catalogue — the publications and institutions relied on

Global Cement	Trade press	Egyptian nameplate capacity, production, consumption and export volumes for 2025; the dormant-capacity revival programme of 12.6Mt from the second half of 2026.	globalcement.com
EnterpriseAM Egypt	Financial press	The 2025 review of the Egyptian cement industry and the 2026 outlook: consumption of 54Mt, the EGP 3,600 per tonne price expectation for 2026, demand-growth forecasts of 1% to 8%, and the abolition of the production-quota system in May 2025 with exports capped at 30% of output.	enterpriseam.com
S&P Global Market Intelligence, via independent aggregations	Data aggregator	FY2025 operating income of EGP 4,595.82mn; Q4-2025 revenue of EGP 3,645.60mn and EBITDA of EGP 1,393.01mn; the trailing gross margin of 40.77%; total assets, total equity, total debt and cash; the share count of 374.87mn.	Relayed through search summaries of stockanalysis.com, simplywall.st and investing.com; the three summaries were cross-checked against each other, but none of the three pages was retrieved
Central Bank of Egypt	Central bank	Main operation rate of 19.50% held at the April and May 2026 meetings, with the overnight deposit and lending rates at 19.00% and 20.00%; the Q1-2026 Monetary Policy Report; the medium-term inflation target of 7% used to build the terminal risk-free rate; the headline urban inflation series easing to 14.3% in June 2026.	cbe.org.eg

Egyptian Tax Authority	Tax reference	Statutory corporate income tax rate of 22.5%.	Statutory rate
Aswath Damodaran — country risk premium file	Reference dataset	Egypt equity risk premium and sovereign default spread on the credit-default-swap basis, January 2026 edition. The original file only.	Used for the cost-of-equity build
Amwal Al Ghad — bank exchange-rate surveys	Financial press	The Egyptian pound at 50.30/50.40 against the dollar at the close of 4 August 2026, and an average bank buying rate of 51.01 on 1 August 2026.	en.amwalalghad.com
Egyptian Exchange daily price history	Market data	2,957 daily open, high, low, close and volume records from 18 May 2014 — the listing date — to 6 August 2026, supplied with the engagement. This series is the basis of the price chart, the volatility estimate, the beta regression and the price map.	Supplied as a file
Standard cement engineering benchmarks	Industry reference	Specific thermal energy of 3.2 to 3.6 GJ per tonne of clinker for a dry preheater/precalciner kiln; 90 to 110 kWh per tonne of cement; replacement cost of USD 120 to 150 per annual tonne; fixed cash cost of USD 10 to 20 per tonne of capacity.	Used for the unit cost stack and the asset lens

3 Figures that are DERIVED rather than sourced

These do not appear in any source. They are computed, and the method is given so a reader can reproduce or reject each one.

Figure	How it was derived
Share count — 374.87 million	Triangulated three ways. The FY2024 distribution of EGP 1,100mn at EGP 2.94 per share implies 374.15mn; the FY2025 distribution of EGP 2,000mn at EGP 5.34 per share implies 374.53mn; and the quoted count is 374.87mn. The three agree to within 0.19%, which is why the count is treated as known rather than estimated. The reconciliation is on the model's Per-Share and Ratios sheet.
FY2025 depreciation — EGP 301mn	No depreciation line is separately retrievable. Three independent methods are computed and averaged ON THE SHEET rather than asserted: the Q4-2025 EBITDA margin applied to full-year revenue less the disclosed operating profit gives EGP 160mn; a peer depreciation charge per tonne of despatch applied to this volume gives EGP 558mn; and the net property base implied by total assets less cash and working capital, times a composite rate, gives EGP 185mn. The highest is 3.5 times the lowest and that spread is published.
The effective tax rate — 29.43%	Not chosen and not the statutory rate. Disclosed FY2025 operating income of EGP 4,595.82mn plus modelled net finance income of EGP 504mn — treasury on the disclosed cash balance less interest on the disclosed debt — gives pre-tax profit of EGP 5,100mn. Against the disclosed attributable profit of EGP 3,599mn that leaves this rate and no other. It is above the statutory 22.5% and is used in preference to it.
Sales volume and realised price, FY2023 to FY2025	Volume is kiln capacity times a utilisation path, divided by the clinker factor. Realised price is then disclosed revenue divided by that volume, so the build reproduces the reported top line. The FY2024-to-FY2025 pair is a genuine cross-check rather than an identity: it decomposes the disclosed +42.6% revenue step into a +5.3% volume step on a +35.5% price step, which is what the removal of the production quota should look like.
FY2023 and FY2024 EBIT and EBITDA	Disclosed attributable profit is grossed up at the effective rate derived above to give operating profit, with net finance income set to zero in those years because the cash balance that produces it was built during FY2025. Depreciation at the derived charge per tonne is added back to give EBITDA.
Net property and working capital at FY2025	No breakdown of total assets is retrievable. Inventory is estimated at 60 days of the cost of sales implied by the disclosed gross margin, receivables at 30 days of revenue, and net property is the residual against disclosed total assets and cash. These estimates exist to size the third depreciation method and to open the balance-sheet roll-forward; they are not load-bearing for the valuation.
Terminal return on invested capital — 10.3%	Struck on REPLACEMENT COST — 5.0Mt at USD 130 per annual tonne, or EGP 32,695mn — rather than on book invested capital, which would flatter it several times over because the plant is carried at pre-devaluation historic cost. The consequence is that terminal growth is value-destroying in this model, and that is shown rather than hidden.
Beta — 0.628 adopted	A five-year weekly regression of the shares against a 34-name equal-weight Egyptian composite, with the subject excluded from its own index, returns 0.628 on 257 observations with an R-squared of 0.091 and a standard error of 0.125. That clears the usability gate, so the regression is adopted rather than a default — and it is flagged statistically weak, with the valuation shown across a beta range. A lead-and-lag estimator correcting for the 12.2% of sessions that close unchanged gives 0.919, an uplift not statistically distinguishable from zero; its effect on the valuation is published as a value in the study.
Capital expenditure	No capital-expenditure guidance is obtainable. It is set at the economic maintenance level of USD 4.00 per tonne of installed capacity rather than at book depreciation, because a historic-cost asset base in a currency that has devalued several times understates what it costs to keep a plant running. This is deliberately conservative and the cost of the conservatism is computed in the study.
Non-controlling interests — EGP 150mn	No minority-interest balance is separately retrievable. The size is inferred from the profit statements: disclosed FY2025 earnings per share of EGP 9.49 on 374.87mn shares gives EGP 3,557mn against a stated attributable profit of EGP 3,599mn, a gap of about 1.2% consistent with the statutory employees' and directors' profit share rather than with a large minority. A deliberately non-trivial figure is deducted and sensitised.

4 Research trail

The research was carried out on 2026-08-06 across four concentric rings — global, country, industry and company — with 26 recorded findings. Each finding below names the source and the date that source carries.

Ring	Topic	Finding	Source	Date
Global	rate cycle and FX regime	The global easing cycle is under way, which is the backdrop against which Egypt normalises a 19.50% policy rate rather than the cause of it	US Federal Reserve policy history as carried in the house rate schedule	2026-06-18
Global	commodity complex (input)	Cement is an energy-conversion business: solid fuel and electricity dominate cash cost, so the fuel bill is the single most important cost driver in the build	Global Cement / International Cement Review industry coverage	2026-02-16
Global	carbon and trade policy	The EU Carbon Border Adjustment Mechanism raises the landed cost of Egyptian cement in Europe; a low-carbon producer earns a relative premium estimated at about EUR 5.4 per tonne on European sales	Industry coverage of Egyptian producers' CBAM positioning	2026-01-01
Global	traded-goods structure	Cement is not traded at distance — bulk freight caps the economic export radius, so global demand reaches an Egyptian producer only through the Mediterranean and East African basin and never through a world price	Global Cement, Egypt country coverage	2025-10-01
Country	sovereign macro	The Central Bank of Egypt held the main operation rate at 19.50% (overnight deposit 19.00%, lending 20.00%) at its April and May 2026 meetings; headline urban inflation eased for a third month to 14.3% in June 2026, and the CBE expects it to accelerate through Q3-2026 on base effects before declining toward target	Central Bank of Egypt policy decisions and Monetary Policy Report Q1-2026; CAPMAS CPI release	2026-07-10
Country	sovereign credit	Egypt's five-year credit default swap traded around 335 basis points in mid-2026, far tighter than the 2024 crisis peak	Sovereign CDS quotations as carried by market data services; Damodaran country risk file, January 2026 edition, CDS column	2026-05-15
Country	currency	The pound has been broadly stable around EGP 50.3-51.0 per US dollar through July and early August 2026	Egyptian bank exchange-rate surveys reported by Amwal Al Ghad and Arab Finance	2026-08-04
Country	fiscal policy	Phased energy-subsidy reform continues to raise the domestic industrial energy bill independently of the global fuel price	Egyptian cement industry market coverage on energy reform, currency volatility and raw-material management	2026-02-16
Country	taxation	Egypt's statutory corporate income tax rate is 22.5%	Egyptian Tax Authority statutory rate	2026-01-01
Industry	sector structure	Egypt abolished the cement production-quota system in May 2025 and capped exports at 30% of a producer's output; prices stabilised near USD 81 per tonne after the change	Egyptian Competition Authority and Industrial Development Authority decisions as reported by Enterprise and Global Cement	2025-05-01
Industry	supply pipeline	With quotas gone, producers are studying the revival of seven to nine dormant production lines, potentially adding 12.6 million tonnes from the second half of 2026 — about 23% of domestic consumption	Global Cement, Egypt update; Enterprise industry coverage	2025-10-01
Industry	demand and price	Domestic consumption grew 13-14% to roughly 54 million tonnes in 2025 and cement sales rose 10.4% to 44.7Mt in FY2024/25; Portland prices ran 80-85% above the 2024 average during 2025 and are expected to settle near EGP 3,600 per tonne in 2026, with demand growth forecasts for 2026 spanning 1% to 8%	Enterprise industry review of Egyptian cement 2025; Arab Finance building-materials indicators	2026-01-15
Industry	capacity and utilisation	Egyptian nameplate capacity is about 76 million tonnes against roughly 54 million tonnes of domestic consumption and about 65 million tonnes of production	Global Cement, Egypt country update	2025-10-01
Industry	exports	Egyptian cement and clinker exports were about 18.5 million tonnes in 2025, with finished-cement exports up sharply and clinker exports down	Global Cement export coverage	2026-01-01
Industry	cost benchmarks	Dry preheater/precalciner kilns run at 3.2-3.6 GJ per tonne of clinker and 90-110	Standard cement engineering and	2026-08-06

		kWh per tonne of cement; replacement cost for grey-cement capacity sits in the USD 120-150 per annual tonne band and fixed cash cost in the USD 10-20 band	industry cost benchmarks	
Industry	peer set	The listed Egyptian cement comparator set is thin and its published multiples are internally inconsistent: for one peer a quoted price/earnings ratio cannot be reconciled with the market capitalisation printed beside it	Aggregated peer data cross-checked against reported profit and market capitalisation	2026-08-06
Company	asset base	Two production lines in Suez governorate producing on average about five million tonnes of first-quality clinker and cement a year, roughly 6% of Egypt's nominal capacity — the second largest cement plant in the country	Company corporate disclosure (About Us) and industry profiles	2026-01-01
Company	financial history	Net sales EGP 4.67bn (2022), 6.04bn (2023), 8.729bn (2024) and 12.447bn (2025, +42.6%); attributable profit EGP 358.98mn, 697.49mn, 1.160bn and 3.599bn; earnings per share EGP 3.02 (2024) and 9.49 (2025)	EGX filings reported by Mubasher, Arab Finance, Zawya and cemnet	2026-03-01
Company	financial history	Full-year 2025 operating income of EGP 4,595.82mn and a fourth-quarter EBITDA of EGP 1,393.01mn on fourth-quarter sales of EGP 3,645.60mn; trailing gross margin 40.77%	Aggregated income-statement data from S&P Global Market Intelligence as carried by independent aggregations	2026-03-01
Company	balance sheet	Total assets about EGP 8,783.72mn, total equity about EGP 4,642.73mn, total debt about EGP 1,035.19mn and cash about EGP 3,459.39mn on the latest reported balance sheet — a NET CASH position of roughly EGP 2.42bn	Aggregated balance-sheet data from S&P Global Market Intelligence as carried by independent aggregations	2026-03-01
Company	recent trading	First-quarter 2026 net sales EGP 2.995bn (from 2.554bn) and attributable profit EGP 943.068mn (from 590.347mn), +59.7% year on year, earnings per share EGP 2.50	EGX filing reported by Arab Finance, Zawya and MarketScreener	2026-05-12
Company	distributions	Cash dividends of EGP 1.10bn for 2024 (EGP 2.94 per share) and EGP 2.0bn for 2025 (EGP 5.34 per share), a payout of about 56% of attributable profit	Company general-meeting resolutions reported by Mubasher and Arab Finance	2026-04-01
Company	ownership	Cementos La Union of Spain acquired majority control in 2004 and the company listed on the EGX in May 2014; the price history supplied begins on the listing date	Company history disclosure; the supplied EGX daily series	2014-05-18
Company	decarbonisation and cost position	The company is Egypt's alternative-fuel leader — refuse-derived fuel and biomass substitution, a 7.2 MWh solar station commissioned in 2019, baghouse filters and hydrogen injection in 2024, targeting a 120,000-tonne annual emissions reduction — and is advancing supplementary cementitious materials, calcined-clay clinker and a CEM III product with 50% slag	Company sustainability disclosure and industry coverage	2026-01-01
Company	market data	Closing price EGP 59.00 on 6 August 2026 (open 58.40, high 59.90, low 58.25) on 374.87mn shares — a market capitalisation of about EGP 22.1bn	The supplied EGX daily series; share count corroborated by both dividend distributions	2026-08-06
Company	price behaviour	The supplied series runs 2,957 sessions from 18 May 2014 to 6 August 2026 with no placeholder rows, no unadjusted corporate action and a largest single-session move of 18.2% against the exchange's 20% daily limit; the share closes unchanged on 12.2% of sessions against an Egyptian library median of 9.0%	House data-quality gate over the supplied series	2026-08-06

5 How each forecast driver was set

Every driver states whether it was built from the ground up or set from the top down, and names the findings above that it rests on.

Driver	Basis	How it was set	Findings
Sales volume (Mt)	Bottom Up	Built from nameplate cement capacity of about 5.0Mt times a kiln utilisation path, cross-checked two ways: against the disclosed share of Egyptian nominal capacity (about 6% of 76Mt = 4.6Mt) and against sector utilisation of roughly 70%. Quota abolition is the unlock that lets utilisation rise.	F17, F10, F13, F11
Realised price (EGP/t)	Bottom Up	Domestic and export prices are carried separately. The FY2025 domestic price is the level the DISCLOSED revenue implies given the volume build and the export split, so the build ties back to the printed top line	F12, F14, F18, F04

		rather than asserting a price.	
Fuel cost and alternative-fuel substitution	Bottom Up	Thermal energy per tonne of clinker times a blended fuel price, where the blend is the company's own alternative-fuel substitution rate applied between a fossil and a refuse-derived fuel price. This is the company-specific lever and it is modelled as one, not folded into a margin.	F24, F02, F15, F07
EBITDA margin	Bottom Up	An OUTPUT of the physical cost stack, not an input. It glides down from the FY2025 peak on two named, dated mechanisms — 12.6Mt of dormant capacity restarting from 2H-2026, and phased energy-subsidy reform — and is calibrated so the FY2025 reconstruction reproduces the disclosed operating profit.	F11, F08, F19, F15
Depreciation and amortisation	Top Down	No depreciation line is separately disclosed in any retrievable source. It is TRIANGULATED on the sheet by three independent methods — a fourth-quarter EBITDA-margin closure, a peer per-tonne anchor, and a net-property-base estimate times a composite rate — and averaged there rather than asserted.	F19, F20
Capital expenditure	Top Down	No capital-expenditure guidance is obtainable. Capex is set at the ECONOMIC maintenance level in dollars per tonne of capacity rather than at book depreciation, because a historic-cost asset base in a currency that has devalued several times understates what it actually costs to keep the plant running. This is deliberately conservative and is stated as such.	F15, F17, F07
Cost of debt and the discount-rate glide	Bottom Up	The company is NET CASH, so the cost of debt carries almost no weight in the blended rate; the glide SHAPE is inherited from the cost-of-debt path implied by the central bank's own easing calendar rather than invented separately.	F05, F20
Terminal risk-free rate	Bottom Up	Norm-built from the central bank's own published medium-term inflation target plus a standard emerging-market real-rate convention. Never a historical average and never reverse-engineered from a target price.	F05
Treasury income	Top Down	Modelled as a yield on the modelled cash balance. No interest-income line is separately retrievable, so it cannot be built bottom-up. It is excluded from free cash flow to the firm entirely and handled in the equity bridge, so it cannot be double-counted.	F20, F05
Terminal growth	Bottom Up	Held at the 5% house default for an established emerging-market industrial once currency turbulence has passed, sensitised 3-7%, and reconciled against the return on capital that would have to fund it.	F05, F15
