

ADNOC Distribution — valuation model

THIS WORKBOOK CALCULATES

BLUE IS AN INPUT, BLACK IS A FORMULA

**ONLY THREE KINDS OF CELL ARE PASTED — 1. AUDITED
AND DISCLOSED HISTORY**

2. THE OUTPUT OF THE UNIT BUILD

3. WHOLE-MODEL RE-RUNS

THE CONTESTED JUDGEMENT IS CARRIED BOTH WAYS

WHERE TO START

Everything that can be derived from a driver is a live formula. Change a driver on the Assumptions sheet and the glide, the discount factors, the cash-flow waterfall, the terminal block, the statements and every ratio all move.

That is the whole colour code. A blue cell is a number that came from somewhere; a black one is computed above it.

The FY2023, FY2024 and FY2025 statement columns and the disclosed operating figures (volumes, station capacity and profit). Where a line is both disclosed and derivable, the DISCLOSED figure is carried, because that is what the market sees.

The opening volumes, prices and margins per litre that the forecast grows from. Flattening the reconciliation grid would make it unreadable.

The probability map on the Monte Carlo sheet and the grids on the Sensitivity sheet. Each of those cells is a snapshot of the entire model at a different setting. THEY DO NOT REDRAW WHEN A DRIVER CHANGES. Every other number is derived from them.

Inventory movements were AED 254m in FY2024, AED 335m in FY2025 and AED 762m in the first half of 2026. Inventory volume growth of 1.6% in that half. Frame A normalises them to zero from FY2027; Frame B carries the FY2026 inventory. Both run all the way through to a value per share and they are NEVER averaged together.

Summary for the answer, Assumptions for every driver, Segments for the volume and margin build, DCF for the terminal block, SOTP Bridge for the enterprise-to-equity walk and the terminal share of value.

Summary valuation	Frame A (AED)
Discounted cash flow	4.78
Normalised earnings power	4.01
Relative multiples	4.95
Book value and sustainable return	3.36
TERMINAL VALUE AS A PERCENTAGE OF ENTERPRISE VALUE, beside the cash-flow reading	74.9%
WEIGHTED CENTRE	4.41
Dividend capitalisation (unweighted fifth reading)	2.71
Market price (AED)	4.07

Frame B (AED)	Note
5.10	<i>the cash the business generates</i>
4.01	<i>structural gross profit only</i>
5.17	<i>triangulated on the company's own history</i>
3.36	<i>return on a deliberately thin equity base</i>
74.9%	<i>it is high, and it is stated here rather than buried</i>
4.58	<i>the two frames are published side by side, never averaged</i>

The four lenses	Frame A (AED)
Discounted cash flow	4.78
Normalised earnings power	4.01
Relative multiples	4.95
Book value and sustainable return	3.36
SUM OF WEIGHTS (must be one)	
WEIGHTED CENTRE	4.41
Market price (AED)	4.07
Difference against the market price	8.4%

Frame B (AED)	Weight
5.10	40.0%
4.01	25.0%
5.17	20.0%
3.36	15.0%
	100.0%
4.58	

12.6%

Note
<i>the cash the business generates</i>
<i>structural gross profit only</i>
<i>triangulated on the company's own history</i>
<i>return on a deliberately thin equity base</i>
<i>the two frames are NEVER averaged into one number</i>

Assumption
Market
Share price (AED)
Shares in issue (millions)
Market capitalisation (AED m)
Cost of capital
Government bond yield, local currency
Sovereign default spread
Normalised risk-free rate = yield less sovereign spread
Total equity risk premium
Beta
Cost of equity = normalised risk-free + beta x premium
Credit margin over the sovereign
Cost of debt before tax = government yield + credit margin
Statutory tax rate
Effective tax rate applied to cash flows
Cost of debt after tax = before tax x (1 less statutory rate)
Net debt excluding leases (AED m)
Equity weight = market capitalisation / (market capitalisation + net debt)
Debt weight = 1 less the equity weight
Cost of capital, first forecast year
Terminal beta = the measured beta (flat, pegged market)
Terminal cost of equity = normalised risk-free + terminal beta x premium
Terminal debt weight = today's weight (flat, pegged market)
Terminal cost of capital = terminal equity and debt weights on their costs
Long-run growth after the forecast period
Terminal return on invested capital
Volume and price drivers — built bottom-up
Service-station network growth
Growth in litres sold per station
Corporate fuel volume growth
Aviation fuel volume growth
Realised retail price per litre (AED)

Realised corporate price per litre (AED)
Realised aviation price per litre (AED)
Retail margin per litre, escalation
Commercial margin per litre, escalation
Fuel transaction growth
Growth in the non-fuel conversion rate
Growth in the average non-fuel basket
Non-fuel retail gross margin
Inventory movement, normalised frame (AED m)
Inventory movement, through-cycle frame (AED m)
Cost, capital spending and working capital
Cash operating cost growth
Other income growth
Impairments and other operating expenses (AED m)
Depreciation and amortisation (AED m)
Capital expenditure (AED m)
Depreciation rate on the opening fixed and right-of-use base
Maintenance capital spending, share of the opening base
Capital cost per station added (AED m)
Receivable days including parent balances
Inventory days
Payable days including parent balances
Dividend per share (AED)
Dividend policy floor, share of net profit
Anchors — the annualised disclosed first half of 2026
Service stations, June 2026
Service stations, FY2025 year end
Litres per station, first half annualised (million)
Corporate fuel volume, first half annualised (million litres)

Aviation fuel volume, first half annualised (million litres)
Fuel transactions, first half annualised (million)
Non-fuel conversion rate, first half 2026
Average non-fuel basket, first half 2026 (AED)
Opening position, from the audited FY2025 balance sheet
Retail fuel volume, FY2025 (million litres)
Commercial fuel volume, FY2025 (million litres)
Retail margin per litre, first half 2026 (AED)
Commercial margin per litre, first half 2026 (AED)
Non-fuel retail revenue, FY2025 (AED m)
Cash operating costs, FY2025 (AED m)
Other income, FY2025 (AED m)
Fixed and right-of-use assets, FY2025 (AED m)
Goodwill, intangibles and other non-current, FY2025 (AED m)
Equity attributable to owners, FY2025 (AED m)
Non-controlling interests, FY2025 (AED m)
Borrowings, FY2025 (AED m)
Lease liabilities, FY2025 (AED m)
Provisions and deferred tax, FY2025 (AED m)
Term deposits, FY2025 (AED m)
Finance costs, held at the FY2025 level (AED m)
Interest income, held at the FY2025 level (AED m)
Non-controlling share of profit (AED m)

Relative multiples and normalised earnings power	Frame A
<i>Triangulation: the reference multiple is the AVERAGE of three independently-derived readings, taken on</i>	
Own trailing multiple today	18.17x
Own three-year average multiple	19.57x
Retention the growth rate requires = growth / return on equity	1.86%
Payout consistent with that growth = 1 less the retention	98.1%
REFERENCE MULTIPLE — what the company's own economics justify	16.32x
Reference multiple carried into the lens	16.32x
RELATIVE MULTIPLES READING (AED a share)	4.95
First forecast year earnings per share — Frame B (AED)	0.317
RELATIVE MULTIPLES READING — Frame B (AED a share)	5.17
Normalised EBITDA — structural gross profit only, no inventory movement	4,648
Normalised EBIT	3,856
Normalised NOPAT	3,464
Reinvestment this perpetuity must fund = growth / return on capital	6.0%
Normalised enterprise value = NOPAT x (1 less reinvestment) / (cost of capital less growth)	54,836
Normalised equity value	50,174
NORMALISED EARNINGS POWER READING (AED a share)	4.01
Book value per share (AED)	0.258
Sustainable return on equity — the three-year mean	80.8%
Justified multiple of book = (return less growth) / (cost of equity less growth)	12.99x
BOOK VALUE AND SUSTAINABLE RETURN READING (AED a share)	3.36
DIVIDEND CAPITALISATION READING (AED a share, unweighted)	2.71

Frame B	Basis
	<i>the sheet rather than asserted.</i>
	<i>traded price over the FY2025 audited earnings per share</i>
	<i>traded price against each audited year, averaged</i>
	<i>the sustainable-growth identity $g = \text{retention} \times \text{ROE}$</i>
	<i>payout $\times (1 + \text{growth}) / (\text{cost of equity less growth})$, on the payout the growth rate itself implies — NOT the realised payout and NOT the policy floor, either of which breaks the identity</i>
	<i>the fundamentals leg ALONE. The two traded multiples above are published as context and are deliberately NOT averaged in: both are the traded price divided by earnings, so averaging them would anchor the lens to the price it is being compared against</i>
	<i>reference multiple on the first forecast year</i>
	<i>the same construction as the income statement, on Frame B earnings</i>
	<i>the same reference multiple on Frame B earnings</i>
	<i>the identity $g = \text{ROIC} \times \text{reinvestment}$ governs EVERY perpetuity, not only the cash-flow model terminal block. This lens previously credited growth for free</i>
	<i>the dividend is a FIXED commitment held flat from 2024 through 2030, so it is valued flat. Growing it credited growth the policy does not promise</i>

The discounted cash flow	FY2026E
Glide fraction toward the terminal cost of capital	20.0%
