

ADNOC Logistics & Services plc (Abu Dhabi Securities Exchange: ADNOCCL5) — Bibliography and Source Register

Companion document to the valuation study dated 9 August 2026. It records where every number in that study came from, and what was decided rather than read.

READ FIRST

What this is. A complete list of the 617 inputs the valuation model uses. Each carries its value, the date the source itself bears, and the source with the construction that produced it. Nothing in the study is computed from a figure that does not appear here, so a reader can check the work rather than trust it.

How to use it. Read the guide to the research layers first, then the list of documents actually read. The input register is the body of the document and is meant to be searched, not read front to back: find the figure you want to test, and the row tells you where it came from and how it was built. The tables after it are the short ones that matter most — what the study judged rather than observed, what it looked for and could not find, and where two readings of the same figure disagreed.

What is not here. Nothing is summarised out. Where a figure is derived, solved or assumed, the row says so in its own words rather than presenting it as a disclosure. Where a search came back empty, it is written down as an empty search.

The reporting unit. The company reports in US dollars and this study values it in US dollars, converting to dirhams at the fixed peg of 3.6725 only to compare with the quoted price. Unless a row shows another unit, every figure in the register is in THOUSANDS of US dollars.

The research layers

Every input is tagged with the layer of evidence it belongs to. The layers run from the company outwards, and they are not interchangeable: what a layer is allowed to be the source of is as much a part of the method as the figure itself.

Layer	Inputs	What sits in it, and what it may be the source of
Company	584	The company's own issued documents — audited consolidated financial statements, reviewed interim financial information, the annual report and accounts, management commentary, investor presentations and earnings-call transcripts. Every reported historical figure in the study comes from this layer and from nowhere else. It is also where the unit drivers live: vessel counts, the rates each vessel class earned, the contract table, the order book and the guided spending path.
Industry	6	Marine transport and energy logistics: the tanker order book as a share of the trading fleet, broker prints of prevailing rates, one-year charter levels fixed by other owners, and the enterprise multiples of comparable listed operators. Used for context, for cross-checks and for the comparison lens — never as the source of a figure the company itself reports.
Country	17	The United Arab Emirates: the dirham government bond yield, the sovereign default spread and equity risk premium, the currency's fixed parity to the dollar, the corporate tax regime and the minimum top-up rate, and projected growth and inflation. This is where the cost of capital and the tax treatment come from.
Global	2	Conditions common to every market rather than to this one: the dollar overnight financing rate that every one of the group's debt instruments is priced off, the mature-market equity risk premium, and the long-run nominal anchor behind the terminal discount rate.
Market	8	The security itself: the last close used throughout the study, and the statistics estimated from its own price history — the slope of its weekly returns against the published index of the exchange it trades on, the standard error and fit of that regression, the two bounds of the interval around the slope, the lead-lag variant, and the slope the same returns give when they are measured against an equal-weight composite of that exchange's own names instead of the published index.

Why the company's own statements are the only admissible source for its own history

A valuation is only as good as the base year it starts from, and a base year assembled from second-hand numbers is not a base year at all. Data vendors, brokers and press coverage all restate: they blend segments that the company reports separately, carry figures forward from an earlier year, apply their own definitions of earnings and net debt, and correct silently. None of that is visible downstream. So the rule applied here admits nothing but the company's own issued and audited documents as the source of the company's own reported figures.

That rule was met in full for this study. Four complete audited financial years were obtained — FY2022, FY2023, FY2024, FY2025 — against a floor of two, together with the reviewed interim information for the one quarter of the study year disclosed so far. Every historical income-statement, balance-sheet, cash-flow and segment figure in the register below is read from those filings. External sources appear for the cost of capital, the tax regime, sector context and the comparison lens, and are labelled as such wherever they are used.

The documents actually read

Every document below was downloaded from the company's own investor pages and read from the filing itself. All of them are held as PDF copies alongside the model, and the file held is named in each row so that a reader can ask for the same document rather than a description of it. The publisher of every document in the first table is ADNOC Logistics & Services plc; the audited statements were audited by PricewaterhouseCoopers.

The company's own documents

Document	Date	File held	What was taken from it
Consolidated financial statements for the year ended 31 December 2025, audited	10 Feb 2026	FS_FY2025.pdf	The 2025 income statement, balance sheet and cash flow statement with the 2024 comparatives; the operating-segment schedule by business unit including segment earnings, depreciation and property; the revenue-by-service and cost-by-nature notes; borrowings, leases and their rates; the business-combination note for the tanker acquisition; the perpetual capital securities; the goodwill test that the terminal growth rate is taken from; share capital and treasury. Supplies 178 of the figures below.
Consolidated financial statements for the year ended 31 December 2024, audited	11 Feb 2025	FS_FY2024.pdf	The 2024 statements and the 2023 comparatives they carry — the second and third historical years of the income statement, balance sheet and cash flow, and the segment schedule under the reporting structure then in force. Supplies 122 of the figures below.
Consolidated financial statements for the year ended 31 December 2023, audited	1 Feb 2024	FS_FY2023.pdf	The third historical year, and the segment schedule that makes the later reclassification visible. Supplies 57 of the figures below.
Consolidated financial statements for the year ended 31 December 2022, audited	1 Feb 2023	FS_FY2022.pdf	Completes the four-year audited record and carries the segment schedule from before the group was reorganised, which is the evidence that the segment series is not comparable across the whole span. No figure is cited to it directly; it is the evidence behind the statements that are.
Annual Report and Accounts 2025	10 Feb 2026	AR2025.pdf	The audited statements as machine-readable text where the standalone filing is an image, plus the fleet, order-book and operating review. Supplies one of the figures below.
Annual Report and Accounts 2024	11 Feb 2025	AR2024.pdf	The same for the 2024 statements and their 2023 comparatives; this is the volume the 2023 figures were read from.
Annual Report and Accounts 2023	1 Feb 2024	NOT HELD	NOT HELD as a separate volume. The 2023 audited statements themselves are held and were read directly, and the 2024 volume carries the 2023 comparatives, so no figure depends on it. Recorded rather than quietly dropped.
Condensed consolidated interim financial information for the three months ended 31 March 2026, reviewed	14 May 2026	FS_Q1_2026.pdf	The first-quarter income statement with 2025 comparatives, the balance sheet at the valuation date, the full segment schedule, the cash flow, the borrowings and related-party rates, and the events-after-reporting note. Supplies 37 of the figures below.

Document	Date	File held	What was taken from it
Management commentary on the first quarter of 2026	14 May 2026	MDA_Q1_2026.pdf	The raised guidance for 2026 by line and by business unit, the distribution policy, the medium-term leverage target, net debt and free cash flow, and the segment revenue and earnings table the quarterly build is anchored on. Supplies 44 of the figures below.
Management commentary on the 2025 full year	11 Feb 2026	MDA_FY2025.pdf	The full-year and fourth-quarter bridge, the company's own definition of net debt and of earnings, and the re-presentation note on tanker revenue. No figure is cited to it directly; it is the evidence behind the statements that are.
Management commentary on the 2024 full year	12 Feb 2025	MDA_FY2024.pdf	The 2024 comparative basis for the same tables, used to check that the 2025 presentation change is a presentation change and not a restatement of profit.
Investor presentation, April 2026	30 Apr 2026	IP_Apr2026.pdf	The unit drivers: owned fleet by vessel class, the twelve vessels chartered out with each rate and expiry, the gas contract table quarter by quarter to 2029, the order book and remaining committed spending, the guided capital-expenditure path, long-term contracted revenue and its run-off, the share of earnings exposed to spot rates, and the disclosed sensitivity of earnings to a change of USD 1,000 a day. Supplies 41 of the figures below.
Investor presentation, 2025 full year	11 Feb 2026	IP_FY2025.pdf	The quarterly time-charter equivalents by vessel class back to the start of 2024, the jack-up barge and support-vessel counts, and the contracted share of 2026 revenue. Supplies 31 of the figures below.
Earnings-call transcript, first quarter of 2026	14 May 2026	CALL_Q1_2026.pdf	The rates achieved in the first quarter and the level the second quarter was crossing at the time of the call, and management's own account of why. Supplies 9 of the figures below.
Earnings-call transcript, 2025 full year	11 Feb 2026	CALL_FY2025.pdf	Context for the acquisition, the newbuild programme and the distribution policy; read in full, and used to check the presentation figures rather than as a source of numbers.
Earnings release, 2025 full year	31 Jan 2026	REL_FY2025.pdf	The realised sale of a 2017-built very large crude carrier in January 2026, its carrying value and the gain — the only market evidence of what this fleet is worth secondhand. Supplies 4 of the figures below.
Announcement of the purchase of eleven vessels	7 Aug 2026	announcement, not a filed document	The single most consequential document in this edition, and it is dated the same day as the closing price the study is anchored on. It gives the number of vessels by class — 6 very large crude carriers and 5 gas carriers — the approximate consideration of USD 1,300m, the delivery quarters, and the fleet counts the company says the purchase takes it to. WHAT IT CHANGED: the first edition of the study did not carry the transaction at all, so a fair value that excluded the vessels was being compared with a market price that already included them. The vessels now join the model on their announced delivery dates and earn from those dates, and the consideration is added both to the debt-like deduction in the bridge and to the asset base that depreciates. It also confirms a correction the previous edition had already made from a different document: the company states the purchase takes the crude fleet to fourteen, and the corrected valuation-date count of 8 plus 6 is fourteen. Supplies 3 of the figures below.

External documents

Document	Publisher	Date	What was taken from it
Dirham treasury bond auction result, the tranche maturing January 2031	UAE Ministry of Finance, as reported by the Emirates News Agency	30 Jul 2026	The observed government yield of 4.48%, which after deducting the sovereign's own default spread is the risk-free rate in the cost of equity.
Country risk premium and default spread file, January 2026 edition	Aswath Damodaran, NYU Stern	5 Jan 2026	The sovereign default spread of 0.42%, the total equity risk premium of 4.87% and the mature-market premium of 4.23%. The original file only, read for this sovereign rather than borrowed from a regional figure.
Published overnight financing rate	Federal Reserve Bank of New York	6 Aug 2026	The dollar base rate of 3.65% that every one of the group's debt instruments is contractually priced off, and the anchor for the marginal cost of debt.
Federal Decree-Law 47 of 2022 on the taxation of corporations and businesses	Government of the United Arab Emirates	1 Jun 2023	The 9% standard corporate rate above the threshold, and the relief for income from the international transport of goods and passengers that the company's own segment tax disclosure shows the effect of.

Document	Publisher	Date	What was taken from it
Base rate decision	Central Bank of the UAE	29 Jul 2026	The policy rate of 3.65% and the confirmation that the dirham peg is maintained.
World Economic Outlook database, United Arab Emirates	International Monetary Fund	30 Apr 2026	Real growth of 3.10% and consumer price inflation of 2.50% for 2026, used as context for the terminal assumptions rather than as a forecast driver.
Company statistics page, Qatar Gas Transport (Nakilat)	stockanalysis.com	9 Aug 2026	The enterprise-to-earnings multiple of 12.26x for the contracted-fleet comparator, with its price-to-earnings and price-to-book figures.
Company statistics page, Frontline plc	stockanalysis.com	9 Aug 2026	The enterprise-to-earnings multiple of 8.96x for a fleet traded at spot.
Enterprise-value-to-earnings page, International Seaways	valueinvesting.io	26 Jul 2026	The enterprise-to-earnings multiple of 8.10x for the second spot comparator. Aggregator figures appear only here, as a labelled cross-check in the comparison lens.
Daily history of the FTSE ADX General Index	Published by FTSE Russell with the Abu Dhabi Securities Exchange; the series obtained as a dated export	24 Jul 2026	The market the beta is measured against, series code FADGI, taken as of 24 Jul 2026: 3,883 daily sessions from 2 Jan 2011 to 24 Jul 2026, checked session by session against the exchange's own trading calendar before use. This is the capitalisation-weighted index of the exchange the share is listed on, which is the market measurement the method calls for, and it is resolved from that listing rather than selected here. Regressed on it, the stock's weekly returns give a slope of 1.103. It is market data rather than company data, so it is not covered by the rule that admits only the company's own filings — that rule governs the company's own reported history, which an index level is not.
Daily price history for the stock, and for the Abu Dhabi listed names held alongside it	Abu Dhabi Securities Exchange	7 Aug 2026	The last close of 6.16 AED used throughout; the 159 paired weekly observations behind the regression against the published index; and the equal-weight composite of 12 of the exchange's own names, which is the alternative measurement of the market the same regression is also run against.

A quotation this study turns on

One sentence spoken on an earnings call changed the shape of the model more than any document in the tables above, so it is reproduced here in full with its context rather than cited. On the first-quarter 2026 call, an analyst asked how the reported rate for the largest tanker class squared with what the spot market was paying at the time. The chief financial officer answered:

“... was related to our full fleet of 8, and it includes all the vessels on long-term charter as well ... it's a blended rate that we give there, which is obviously less than the spot rate.”

Field	Detail
Source	Q1 2026 earnings call transcript, ADNOC Logistics & Services plc
Date	14 May 2026
File held	CALL_Q1_2026.pdf
Speaker	The chief financial officer, answering an analyst question on the rate reported for very large crude carriers in the first quarter
What it establishes	That the single rate the company publishes for each vessel class each quarter is an average across the whole class, taken over the vessels trading in the open market AND the vessels already committed on charters out at rates fixed earlier. It is therefore lower than what an uncommitted vessel earns, by an amount that depends on how many of the class are committed and at what rates.
What it changed	The first edition of the study read the published figure as the open-market rate and then added the chartered vessels beside it at their own, lower, disclosed rates — charging the same drag twice. The model now carries each of the 12 chartered vessels individually for exactly the days its own contract runs, and solves the open-market rate out of the published average instead of assuming it. For the largest class in the first quarter of 2026 the solved figure is 199,838/day against a published 145,000/day.
How it is used	As evidence about what a disclosed figure means, not as the source of a figure. Every rate in the model still comes from a published table; what the quotation changes is the arithmetic applied to those tables.

The company site was reached for every company document. Of the three investor pages tried, two returned everything asked of them; one index page returned a server error from this environment and its documents were obtained through the other two, so nothing was lost. A failed attempt is still a fact about how the record was assembled, so it is recorded rather than omitted.

The input register — every figure the model uses

All 617 inputs, grouped by research layer and, within a layer, in the order the model declares them — which follows the shape of the accounts: income statement, balance sheet, cash flow, the disclosed quarter, then segments, service lines, cost lines, the fleet, rates, guidance and the forecast drivers. Values are shown as the model holds them. Unless a row shows another unit, figures are in thousands of US dollars; rates and shares are shown as percentages, vessel earnings and running costs per vessel per day, cycle measures in days, and multiples with an x.

Company layer — 584 inputs

Input	Value	Date	Source and construction
shares mn	7,398.499 mn	31 Dec 2025	Authorised, issued and fully paid ordinary shares of USD 0.54 each (share capital note)

acq 2026 cost	1,300,000	7 Aug 2026	Announced 7 August 2026 — purchase of eleven vessels, six very large crude carriers and five gas carriers, for about USD 1.3 billion; nine delivering in the third quarter of 2026 and two gas carrier newbuildings in the fourth
acq 2026 vlcc	6	7 Aug 2026	Announced 7 August 2026 — very large crude carriers in that purchase, taking the owned crude fleet to fourteen
acq 2026 gas	5	7 Aug 2026	Announced 7 August 2026 — gas carriers in that purchase, taking the owned gas fleet to twelve very large gas carriers
vlcc sold jan26	1	31 Jan 2026	ADNOC L&S plc, FY2025 earnings release — the 2017-built very large crude carrier sold in January 2026, which reduces the owned fleet between the year end and the valuation date
handysize relative	0.79	14 May 2026	ADNOC L&S plc, Q1 2026 earnings call transcript — Handysize rates were softer, down 21%, against medium range up 29%; the two smallest classes moved in opposite directions, so the medium-range rate is scaled by the disclosed Handysize move rather than used unadjusted
tnk opex day	9,164/day	31 Dec 2025	Implied all-in running cost per vessel per day, solved so that the owned fleet's charter-equivalent revenue less running cost reproduces the reported Tankers earnings before interest, tax, depreciation and amortisation for 2025
tnk grossup 25	2.74x	31 Dec 2025	Ratio of reported Tankers revenue to owned-fleet charter-equivalent revenue in 2025 — the voyage-cost and low-margin relet and third-party trading content of gross revenue
tnk grossup 26	1.6x	31 Mar 2026	The same ratio for 2026 onward. Reported first-quarter revenue was flat year on year while the rate earned per vessel more than doubled, because low-margin relet and third-party trading fell away; the ratio is set well below the 2025 level to reflect that and is presentational only — it moves revenue, never earnings
gas vessel years 26	12	30 Apr 2026	ADNOC L&S plc, Investor Presentation April 2026 — gas fleet contract table, consolidated vessel-quarters averaged over the year (floating storage 2, the four spot liquefied natural gas carriers to mid-year, one very large gas carrier, the ethane carrier ramp and five Das carriers from the second quarter)
gas vessel years 27	18	30 Apr 2026	ADNOC L&S plc, Investor Presentation April 2026 — the same table for 2027
gas vessel years 28	26.25	30 Apr 2026	ADNOC L&S plc, Investor Presentation April 2026 — the same table for 2028, including the Ruwais carriers entering service
gas vessel years 29	30	30 Apr 2026	ADNOC L&S plc, Investor Presentation April 2026 — the same table for 2029
gas vessel years 30	30	30 Apr 2026	ADNOC L&S plc, Investor Presentation April 2026 — held at the 2029 level; the contract table ends in 2029
gas vessel years 25	8	31 Dec 2025	ADNOC L&S plc, Investor Presentation April 2026 — consolidated gas vessels in service through 2025 (two floating storage units, four liquefied natural gas carriers, one very large gas carrier and the first ethane carrier), excluding the six gas carriers held in the 50% joint venture
gas rate day	61,573/day	31 Dec 2025	Implied average charter revenue per gas vessel per day, solved from reported 2025 Gas Carriers revenue over consolidated vessel-years. Per-vessel rates are not disclosed, so this is the finest level the disclosure supports
jv gas fy25	21,313	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — operating segments note: the share of profit from the AW Shipping joint venture carried inside the disclosed Gas Carriers earnings
jv services fy25	16,079	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — operating segments note: the share of profit from joint ventures and associates carried inside the disclosed Services earnings

Input	Value	Date	Source and construction
gas margin	70%	9 Aug 2026	Gas Carriers earnings margin held near the 2025 outcome of 72% net of joint-venture profit, reflecting that fifteen of twenty owned vessels sit on long-term contracts
drv rev offshore contracting 2026	1,248,192	9 Aug 2026	First-quarter revenue annualised, then 4% a year as further jack-up barges and support vessels are deployed on the contracted programme. nci navig8	251,985	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — statement of changes in equity: non-controlling interests arising on business combinations, being the 20% of the acquired tanker business
jv bv q126	493,120	31 Mar 2026	ADNOC L&S plc, Condensed Consolidated Interim Financial Information, three months ended 31 March 2026 (reviewed) — investment in joint ventures and associates
gross ppe ex cwip fy25	7,595,070	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — note 11, gross cost of property, plant and equipment at 31 December 2025 of USD 8,167,686 thousand LESS capital work in progress of USD 572,616 thousand, which is not depreciated. Buildings 148,743, vessels and marine equipment 7,279,939, plant 5,305, equipment and vehicles 114,636, furniture and office equipment 46,447
vessel life years	25	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — the accounting-policies note states the estimated useful lives directly: tankers 25 years, dry-bulk and containers 25 years, gas carriers 25-40 years, offshore vessels 20-25 years, jack-up barges 40 years, plant 20 years, buildings and port infrastructure 7-50 years. TWENTY-FIVE IS THE STATED LIFE FOR THE MAJORITY VESSEL TYPES and the bottom of the gas-carrier range; the note does not split the USD 7,279,939 thousand vessel line by type, so a gross-cost-weighted blend across vessel classes cannot be computed from this disclosure and is NOT invented. Using the longer end instead would lengthen the life and raise the value, and that alternative is priced in the sensitivity rather than chosen silently
q1 26 fcf	130,000	31 Mar 2026	ADNOC L&S plc, Management Discussion and Analysis Q1 2026 — free cash flow of USD 130 million in the first quarter of 2026, already reflected in net debt at the valuation date
nci share	8.80%	31 Mar 2026	ADNOC L&S plc, Condensed Consolidated Interim Financial Information, three months ended 31 March 2026 (reviewed) — profit attributable to non-controlling interests over profit for the period in the first quarter of 2026

Industry layer — 6 inputs

Input	Value	Date	Source and construction
vlcc 1y tc market	76,900/day	31 Jan 2026	One-year time charters fixed by a listed crude tanker owner in early 2026 for seven very large crude carriers, commencing between late January and April 2026, as reported in trade coverage of its results
vlcc spot clarksons jan26	102,897/day	23 Jan 2026	Weighted average very large crude carrier earnings reported by a shipbroker for the week to 23 January 2026, down from USD 115,635 a week earlier
tanker orderbook pct fleet	27%	30 Jun 2026	Crude tanker order book as a share of the trading fleet, about 130 million deadweight tonnes, reported by trade coverage as a seventeen-year high, with the very large crude carrier order book near 30%
h2 2026 reversion	50%	9 Aug 2026	Weight placed on the 2025 implied spot rate, against the rate implied by the first quarter of 2026, in setting the second half of 2026
ri fade	10%	9 Aug 2026	Rate at which the return above the cost of equity is assumed to decay beyond the forecast. A fleet has to be replaced at market prices rather than at the book value it is carried at, so an excess return cannot persist unchanged; a fifth a year is the house convention for an asset-heavy business and is sensitised from 5% to 30% in the sensitivity section
rel weight ev ebitda	70%	9 Aug 2026	Study judgement — see the judgements table

Country layer — 17 inputs

Input	Value	Date	Source and construction
fx aed usd	3.6725	7 Aug 2026	UAE dirham's fixed parity to the US dollar, unchanged since 1997 and maintained by the Central Bank of the UAE

Input	Value	Date	Source and construction
rf observed	4.48%	30 Jul 2026	UAE Ministry of Finance dirham Treasury Bond auction, July 2026 — the tranche maturing January 2031 cleared at a 4.48% yield to maturity (Emirates News Agency report of the Ministry's auction result)
sov spread	0.42%	5 Jan 2026	Damodaran country risk file, January 2026 edition — United Arab Emirates row, Moody's Aa2, adjusted default spread
erp total	4.87%	5 Jan 2026	Damodaran country risk file, January 2026 edition — United Arab Emirates total equity risk premium
crp	0.64%	5 Jan 2026	Damodaran country risk file, January 2026 edition — United Arab Emirates country risk premium
cb rate	3.65%	29 Jul 2026	Central Bank of the UAE Base Rate, maintained at the 29 July 2026 decision. The last change was a 25 basis point cut from 3.90% on 10 December 2025
erp cds available	none	5 Jan 2026	Damodaran country risk file, January 2026 edition — the United Arab Emirates has no sovereign credit-default-swap entry in the file, so the second premium basis cannot be built for this country. Gulf comparators that do carry one show the two bases are not interchangeable: Saudi Arabia's swap basis gives 5.72% against 5.01% on the rating basis
gdp growth 26	3.10%	30 Apr 2026	International Monetary Fund World Economic Outlook database, United Arab Emirates real GDP growth
inflation 26	2.50%	30 Apr 2026	International Monetary Fund World Economic Outlook database, United Arab Emirates consumer price inflation; the projection settles at 2.0% from 2027 onward, which is the anchor the terminal growth rate rests on
tax topup rate	15%	1 Jan 2025	Domestic minimum top-up tax of 15% applying in the UAE to groups within the global minimum tax rules for financial years beginning on or after 1 January 2025. International shipping income is excluded from those rules, which is consistent with the sub-1% charge the company's shipping units actually bore in 2025, but the exposure is priced as a downside case rather than assumed away
tax stat	9%	1 Jun 2023	UAE corporate tax, Federal Decree-Law 47 of 2022 — the 9% standard rate applying to taxable income above the threshold
rf terminal	3.98%	3 Sep 2026	Terminal risk-free rate, DERIVED from the house macro path as the terminal inflation of 2.00% plus the long-run real rate, NEVER quoted — a terminal rate somebody types is the single most terminal-value-sensitive number in a model. Under the peg the dirham real rate IS the dollar real rate, and the house convention builds it from the Federal Open Market Committee's own longer-run median policy projection plus the ten-year term premium less long-run United States inflation. This study had typed 3.25% on a 1.25% real assumption of its own; the derived figure is higher, so conforming LOWERS this study's value, which is the direction that shows the rule is not being fitted to a price
opex escalation	2%	3 Sep 2026	Running-cost escalation on crew, technical management, insurance and repairs — the HOUSE inflation ladder for this market, read from the macro path rather than typed. The terminal rate is quoted here; the per-year path is opex_escalation_path and is what the model applies
opex escalation path	$0.025 \cdot 0.02 \cdot 0.02 \cdot 0.02 \cdot 0.02$	3 Sep 2026	The house calendar ladder 2026-2030, compounded into opex_index and applied to every dirham cost line. A study may not carry an inflation number of its own
tax integrated logistics	9%	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — operating segments note: the income tax charge borne by each business unit over its own profit before tax in 2025. International shipping income is relieved under the UAE corporate tax law, which is why the shipping units carry almost no charge
tax shipping	1%	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — operating segments note: the income tax charge borne by each business unit over its own profit before tax in 2025. International shipping income is relieved under the UAE corporate tax law, which is why the shipping units carry almost no charge
tax services	4%	31 Dec 2025	ADNOC L&S plc, Consolidated Financial Statements FY2025 (PwC-audited, signed 10 Feb 2026) — operating segments note: the income tax charge borne by each business unit over its own profit before tax in 2025. International shipping income is relieved under the UAE corporate tax law, which is why the shipping units carry almost no charge

Global layer — 2 inputs

Input	Value	Date	Source and construction
erp mature	4.23%	5 Jan 2026	Damodaran country risk file, January 2026 edition — mature-market equity risk premium, the United States premium net of its own default spread
sofr	3.65%	6 Aug 2026	Secured Overnight Financing Rate published by the Federal Reserve Bank of New York

Market layer — 8 inputs

Input	Value	Date	Source and construction
spot aed	6.16 AED	7 Aug 2026	ADX daily price history for ADNOCLS, last close in the series used throughout this study
beta	1.103	24 Jul 2026	Weekly regression of the share's own returns on the FTSE ADX General Index (FADGI), the published index of the exchange the share is listed on — the market series is resolved from that listing rather than chosen by this study, and it is taken as of 2026-07-24. 159 weekly observations measured Friday close to Friday close on the exchange's own trading week, from 2023-06-16 to 2026-07-17, with both series screened for data quality before they are paired. The slope is a lead-lag sum — one lag, the contemporaneous return and one lead, added together. R-squared 0.1814, standard error 0.3147
beta se	0.315	24 Jul 2026	Standard error of the same regression
beta r2	0.181	24 Jul 2026	R-squared of the same regression
beta blume	1.069	24 Jul 2026	Blume cross-check reported with the same regression — two-thirds of the measured slope plus one-third of 1.0, the standard adjustment for the tendency of a measured beta to drift toward the market over time. Published as a check on the adopted figure; the study does not discount at it
beta composite	0.690	7 Aug 2026	The share's own returns regressed against an equal-weight composite of the exchange's own listed names instead of the published index — a basket assembled for this study alone, published for comparison and never adopted, because a hand-built basket is not the market this share is listed against. Reported because the gap between the two is large and is a property of index construction, not of the company: the published index is weighted by size and is dominated by the same large-capitalisation group the subject belongs to
beta ci lo	0.586	24 Jul 2026	Lower bound of the 90% confidence interval on the regressed beta
beta ci hi	1.621	24 Jul 2026	Upper bound of the 90% confidence interval on the regressed beta

The judgements, stated separately

These are the places where the study chose rather than read. Each row states what was taken, and what evidence would overturn it — written before the outcome is known, so that a reader can hold the study to it. They are collected here so they can be found without reading the whole study.

The judgement	What the study took	What would overturn it
Where tanker rates settle after 2026	Not resolved into one number. The whole valuation is computed twice and published side by side: rates reverting to the average of the 2024 and 2025 outcomes gives AED 5.61 a share, rates settling 30% above that gives AED 6.97. This is the study's central contested judgement and the largest single driver in it.	A published forward curve or a third-party rate forecast would replace the judgement outright; none is obtainable. Failing that, a second and third quarter printing at either level settles it — the second-quarter results were scheduled for 11 August 2026, days after this study was struck.
How the tanker fleet is built, vessel by vessel, off the published charter table	Each of the 12 vessels chartered out is carried at its own disclosed rate for exactly the days its own contract runs, and the rate an uncommitted vessel earns is SOLVED out of the class average the company publishes rather than assumed — the average multiplied by the class's vessel-days, less what the committed vessels earned, over the days the uncommitted vessels had. Nothing about the market rate is assumed. What IS judged is that the published average is a straight vessel-day average of the whole class, which is what the chief financial officer's own description of it implies. Only the expiry and the period are published for each charter, so each start date is the expiry less the period; no date is invented.	A disclosed split between committed and uncommitted earnings, which the company does not publish, would replace the construction outright. Failing that, the check available is internal and it passes: where a class has no vessel on charter out, the published average and the solved rate come out identical. If the company weights its published average differently — by revenue rather than by vessel-days, say, or excluding off-hire — the solved rate is too high by the amount the average is understated, and a reported half-year would show it.
How the eleven vessels bought on 7 August 2026 are phased into the model	On their announced delivery dates, and not before. The announcement gives delivery quarters rather than dates, so each group is placed at the start of the quarter it is announced for: the crude carriers and the secondhand gas carriers in the third quarter of 2026, the gas carrier newbuildings in the fourth. From those dates they earn the same open-market rate the rest of their class earns, and they depreciate on the same rate as the rest of the fleet. The whole consideration of USD 1,300m is deducted in the bridge at once, because it is committed at the valuation date whether or not the ships have arrived. What is judged is the phasing WITHIN the announced quarters and the assumption that the ships trade on the class rate rather than on terms of their own.	A delivery notice, or the half-year and full-year statements, which will show the vessels on the balance sheet and the consideration paid. A slipped delivery would take earnings out of 2026 while leaving the deduction in, which is the direction the phasing risk runs. Note that only the part-year matters: from 2027 every vessel is in for the full year on any phasing inside the announced quarters.
The rate carried for the smallest tanker class	0.79 of the medium-range rate. No quarterly rate is published for the handysize class at any point in the record. The previous edition stood the medium-range rate in for it unadjusted; on the first-quarter call the company said handysize rates were softer while medium range was up, so the two classes were moving in opposite directions and the substitution was importing a rise into a class that was falling. The disclosed relative move is used instead of the substitution.	A published handysize rate, which would replace the scaling outright. Failing that, a second disclosure of the relative move in a later quarter. The class is 2 of 52 owned tankers and the lowest earner in the fleet, so the amount at stake is small — but a substitution that points the wrong way is a different kind of error from one that is merely approximate.
The revenue basis the receivable cycle is measured against	Receivable days are 126.4, not the 108.4 that receivables over REPORTED 2025 revenue gives. The two differ because 2025 revenue carries a gross-up of 2.74x over the owned tanker fleet's own charter-equivalent revenue, from chartered-in and relet trading, while the forecast revenue line is built at 1.60x. A day count calibrated on one basis and applied to the other understates the receivable balance by the whole difference between the two conventions, so the count is re-based onto the basis the forecast uses.	A change in the trading mix that moves the gross-up itself, which would move both the ratio and its base together. This correction also falsified a claim the previous edition printed — that the gross-up moves the revenue line and never the earnings line, and therefore cannot affect the valuation. The first half is true and the conclusion does not follow: revenue is the denominator the conversion cycle is expressed in, so the convention reaches the valuation through receivables and the change in working capital. The claim is reprinted and corrected in the study's own caveats rather than dropped.

The judgement	What the study took	What would overturn it
The rate at which the excess return fades in the asset lens	10% a year. The asset lens is built as residual income — opening ordinary book, plus the return earned above the cost of equity on that book for five years discounted, plus a remainder beyond the forecast in which the excess return decays at this rate. The remainder is 7% of what the lens produces. The economic case for a fade is that a fleet has to be replaced at market prices rather than at the value it is carried at, so a return above the cost of equity cannot persist unchanged; the SPEED is chosen rather than measured.	Nothing observable fixes it, and that is the honest answer. A longer record of this company earning above its cost of equity through a full rate cycle would argue for a slower fade; a period of newbuild deliveries competing the return away would argue for a faster one. A slower fade raises this lens and a faster one lowers it, which is one reason it carries the lowest weight of the four.
How the minority interests are deducted	Not at book, and not at a flat share of equity value either. Of the USD 272.1m of minority book at the valuation date (USD 264.5m at the 2025 year end), USD 252.0m arose on the tanker combination, and that 20% is contracted for purchase in mid-2027 at a price already carried in the bridge as deferred consideration (USD 301.5m). Deducting it again at a share of equity value would count the same claim twice, so it stays at book. Only the remaining USD 20.1m is lifted from book to its share of value, giving a total deduction of USD 327.7m.	A review of the first edition called it a critical failure that minorities were deducted at book when they take 8.80% of profit. The premise is right and the conclusion is not, and the arithmetic is published so a reader can decide for themselves: at book the deduction is USD 272.1m, as taken here it is USD 327.7m, and applying the profit share to the whole equity value with nothing netted off would make it USD 1,022.6m. What would overturn it is the purchase not completing, or completing at a different price — at which point the deferred-consideration line changes and this one follows it.
The step-down in rates assumed for the second half of 2026	A half-and-half blend: 50% weight on the 2025 average rate against the rate achieved in the first quarter of 2026. A deliberate step down from a first half running far above the 2025 average.	Third-quarter rates printing at first-half levels would make the blend too conservative; a collapse to the 2025 average would make it too generous. The sensitivity is carried in the study rather than buried, because the first half is already realised and only the back half is assumed.
Which measurement of the market the beta is regressed against	The published index of the exchange the share is listed on — the FTSE ADX General Index — because that is the market the share actually trades in and the measurement the method calls for. It is resolved from the exchange the share is listed on rather than chosen here, and it is the FADGI series taken as of 2026-07-24. Weekly returns from 2023-06-16 to 2026-07-17, measured on that exchange's own trading week, give a slope of 1.103 (159 paired observations, R-squared 0.181, standard error 0.315) and a cost of equity of 9.43%. The slope is a lead-lag sum — one lag, the contemporaneous return and one lead — so the co-movement a thinly traded share books late is inside it rather than added to it afterwards. The same returns measured against an equal-weight composite of that exchange's own names instead, a basket assembled for this study and never adopted, give 0.690, a cost of equity of 7.42% and a central figure of AED 8.02 against the published AED 5.61. Both constructions are computed in full and published side by side; neither is averaged into the other.	A longer price history — the paired record is only 3.09 years (2023-06-16 to 2026-07-17), and length is the one thing that cannot be manufactured. A different definition of the index, since what the two constructions disagree about is which names are in the market and how much say each of them gets. Or evidence that the share's own membership of the index it is measured against materially inflates the slope: it is a constituent, so its own returns sit on both sides of the regression and cannot be taken out of a capitalisation-weighted index. How large that pull is has been measured on the composite, where the share CAN be removed, and it is set out with the empty searches that follow.
The beta used in the low and the high case	The regression's own 90% confidence bounds rather than round numbers picked by hand: 1.621 in the low case and 0.586 in the high case. A higher slope discounts harder, so the upper bound is what belongs in the low case. On the cash-flow lens those give AED 3.04 and AED 10.18 a share against a base of AED 5.61.	A tighter interval, which only more observations give. The standard error is 0.315 on a slope of 1.103, so the two bounds are 94% of the estimate apart and the cases inherit that width honestly. Round betas chosen by hand would look tidier and would be telling the reader less. This interval is WIDER than the one the previous edition of this study published, because the regression was re-measured on the exchange's own trading week; the low and high cases widened with it, which is the width the evidence supports rather than a loss of precision. The same slope shrunk toward the market on the Blume adjustment, 1.069, sits inside these bounds.
The recovery in engineering and construction revenue after 2026	Revenue of USD 125m in 2026 — inside the company's own stated range — recovering to USD 300m by 2030, at margins moving from -2% to 6.50%. This is the least visible line in the model.	A disclosed award pipeline or tender book. Nothing of the kind is published — the empty search is recorded overleaf — so a single announced contract, or a second year at the 2026 level with none, would settle the line in either direction.

The judgement	What the study took	What would overturn it
The capital-expenditure path beyond the guided window	The company's own published path is used to 2028 (USD 1,375m / USD 1,245m / USD 1,245m). Beyond it the study steps spending down to USD 700m and USD 650m as the newbuild programme delivers, toward stated maintenance spending plus continuing fleet renewal.	A new order. The order book and its remaining committed spending are disclosed, so an addition to either is visible immediately and would lift the path; equally, a programme that delivers with nothing behind it would push the tail lower still.
The weighting between the contracted and the spot comparison multiple	Not chosen. The blend uses the company's OWN disclosed share of earnings exposed to spot rates — 31% in 2026 — to weight a contracted-fleet multiple of 12.26x against a spot-fleet multiple of 8.53x, giving 11.10x. What IS judged is the 70% weight placed on the enterprise-multiple reading against the earnings-multiple reading inside that lens, and the choice of three comparable operators rather than a wider set.	A wider comparable set, or the two spot operators re-rating. The three used are the only listed operators whose business model maps cleanly onto one of the company's two halves; adding a mixed operator would blur the very split the weighting exists to respect.
How much weight each valuation lens carries	Cash flow 40%, comparison 25%, normalised earnings 20%, book and sustainable return 15%. The cash-flow lens carries the most because it is the only one that prices the contracted revenue and the delivery of the order book explicitly.	Weighting the four equally instead gives AED 6.71 a share against the published AED 5.61 — small enough that the weighting is not what the answer rests on, which is the point of stating it. A reader who rejects the cash-flow lens entirely is reading a different study, and the four lens values are published separately so that they can.
The treatment of the perpetual capital securities	Two things at once, and they are the two halves of one treatment. They are deducted in full — USD 1,978.6m — in the bridge from enterprise to equity value, because they rank ahead of the ordinary shares however the company classifies them; and they are WEIGHTED in the cost of capital at 12.8% of total capital at their own coupon of 4.90%, because they are a third kind of capital funding the same enterprise. That coupon floats, so it normalises with the risk-free rate in the terminal, at 5.23%. Their coupons never touch the income statement, so earnings available to ordinary holders are struck after them.	The first edition deducted them but did NOT weight them, on the ground that doing both would charge for them twice. That was wrong, and two independent reviews said so: deducting a claim from value and pricing the capital it supplies are different operations, and doing only the first removed a cheap tranche of funding from the enterprise without letting it lower the rate the enterprise is discounted at. Correcting it moves the cost of capital to 8.55% and the terminal rate to 8.52%. Treating the securities as ordinary equity instead — deducting nothing — would add about AED 0.98 a share. A redemption, or a coupon actually deferred, would resolve the classification in one direction or the other.
The terminal growth rate	2%, taken from the company's own goodwill value-in-use test, which projects cash flows beyond its plan at a rate equal to an estimated 2% inflation. Sensitised from 1.0% to 2.5% rather than asserted.	It sits at, not above, projected long-run inflation for the economy (2.50% for 2026, settling lower thereafter), so a structurally faster-growing franchise would justify more. The terminal value is 73% of the cash-flow lens, so this row and the discount rate are where that lens is won or lost.
The cost of debt	5.69%, the average of three constructions rather than one assertion: the marginal drawdown rate on the parent facility (4.45%), the weighted blend of the instruments actually outstanding (5.69%), and the midpoint of the disclosed third-party bank-loan range (7.33%). It sits above the local sovereign yield of 4.48%, as a corporate borrowing in its sovereign's own currency must.	A new issue at a rate outside that spread, or a refinancing that shifts the mix away from the parent facility. The three constructions are published separately so a reader can take whichever they find most representative.
The running cost per tanker per day	9,164/day, solved so that the owned fleet's disclosed rates less that cost reproduce reported 2025 tanker earnings exactly. That makes it a calibration to a disclosed outcome rather than a free assumption, but it is still not a disclosed figure.	A disclosed operating cost per vessel. Escalation is applied at 2% a year as a wage and services escalator, not a commodity index, because crew, technical management, insurance and repairs are what the line actually consists of; a fuel-linked escalator would be the wrong instrument for it.
The gas carrier day rate	61,573/day on average, implied by 2025 gas revenue over consolidated vessel-years read off the published contract table. Per-vessel rates are not disclosed, so the group average is the finest level the disclosure supports, and the margin is held near the 2025 outcome at 70%.	Per-vessel or per-contract rate disclosure. Fifteen of twenty owned vessels sit on long-term contracts, so the risk in this line is smaller than in tankers — but the gap is flagged rather than smoothed.
Treating the company's guidance as a reconciliation, not as the forecast	The build sits above guided 2026 group earnings by 29.3%, and the gap is reported rather than closed. Management states its shipping assumptions sit well below prevailing rates and its logistics guidance at minimum activity levels.	A first half that lands on guidance rather than above it. Guidance was raised once already during the study year on the strength of realised performance, which is the evidence that it is set conservatively rather than centrally.
Taxing each business unit at its own rate	Each unit is taxed at the rate its own segment disclosure shows it bore in 2025 — 9% in logistics, 1% in shipping under the international transport relief, 4% in services — so the group rate is an output of the earnings mix and falls as shipping grows.	The domestic minimum top-up rate of 15% applying to the relieved income would change the shipping leg materially. The relief is legislated and the segment disclosure shows it operating, so the judgement is that it persists.

The judgement	What the study took	What would overturn it
Holding the working-capital cycle at its 2025 shape	Receivable days 126.4, inventory days 14.1 and payable days 131.7, computed from the 2025 statements and held, so the balance sheet and the cash flow are projected from the conversion cycle rather than plugged.	Two consecutive periods of receivable days moving materially in either direction. The counterparty is overwhelmingly the parent group, which is why the cycle is stable enough to hold, and also why a change in it would be a real signal rather than noise.

Negative results — what was looked for and not found

An empty search is a result. Each row below is something the study went looking for, could not obtain, and therefore had to handle another way — recorded here so that a reader can see where the evidence stops and judgement starts, rather than discovering it by reverse-engineering the model.

What was searched for	Date searched	Outcome, and how the study handled it
A forward curve or third-party forecast of tanker rates beyond 2026	9 Aug 2026	Searched for a published forward curve or third-party forecast of crude and product tanker rates beyond 2026 that could be cited. None is obtainable here. The company says it sets its own guidance from a third-party forecasting house and deliberately below prevailing spot, but does not publish the path. Where rates settle after 2026 is therefore an unevidenced judgement and is treated as one — computed both ways and published side by side rather than resolved.
An engineering and construction award pipeline or tender book	9 Aug 2026	Searched the annual report, every investor presentation and both earnings-call transcripts for an engineering and construction award pipeline or tender book beyond the 2026 revenue range and the one project still completing. Nothing is disclosed. The recovery in that line after 2026 is a judgement with no source behind it and is named as such in the study.
Named new entrants into the offshore marine logistics market	9 Aug 2026	Searched for named new entrants into UAE offshore marine logistics and into the jack-up barge and offshore support vessel market serving the parent group. Nothing found: the work is let under long-term contracts by a single dominant customer, and the barriers are the contracts themselves rather than capital. Recorded as a negative result rather than left silent.
A sovereign credit-default-swap spread for the United Arab Emirates	5 Jan 2026	The country risk file carries no swap entry for this sovereign, so the second premium basis cannot be built for it at all. A reader who expects a valuation to publish the cost of equity on both a rating basis and a swap basis should know that only one exists here. The two are not interchangeable where both are available: in the same file, a Gulf comparator that does carry a swap entry shows the swap basis running well above its rating basis. The rating basis is used, and the absence of the alternative is stated rather than papered over with a regional proxy.
Per-vessel or per-contract charter rates for the gas fleet	31 Dec 2025	Not disclosed. The published contract table gives vessel counts and expiries but not rates, so the study solves an average revenue per vessel per day from reported segment revenue over consolidated vessel-years, and says so at the row itself. This is the finest level the disclosure supports.
An operating cost per vessel per day for the tanker fleet	31 Dec 2025	Not disclosed at any level. The running cost is solved so that the disclosed rates less that cost reproduce reported 2025 segment earnings exactly, which anchors it to a disclosed outcome, but it remains a derived figure and is labelled as one.
An index level for the last two weeks of the stock's own price history	9 Aug 2026	The index series obtained ends 24 Jul 2026, while the stock's own history runs to 7 Aug 2026 and is used to that date everywhere else in the study. No later index level could be obtained, so 2 weekly stock observations fall outside the regression: the window stops where the index stops, rather than pairing the stock against an index level that has stopped moving. Related and not searchable at all: the share is itself a constituent of the index it is measured against, so on a capitalisation-weighted index its own returns cannot be removed from the thing they are being regressed on. That one is measured instead of searched for — the equal-weight composite is run both with the share inside it and with it taken out, giving 0.891 against 0.690. The difference of 0.202 is the scale of the upward pull the published-index slope also carries, and it is disclosed in the study. It works against the study's own conclusion, since removing it would lower the beta and lift the valuation.
The comparators' own filings, for the multiples used in the comparison lens	9 Aug 2026	Not obtained, and not attempted at the level the subject's own accounts were. The three comparator multiples come from data-aggregator statistics pages, each named and dated in the external documents table above. Rebuilding them would mean three more sets of filings on three reporting conventions in three currencies. The rule that admits only a company's own issued documents governs the SUBJECT's reported history and is met in full for it; the comparators sit outside that rule and the consequence is specific rather than rhetorical — the study cannot show that a comparator's earnings are struck on the same definition as the subject's, which is why the comparison lens is presented as evidence about relative pricing rather than as an independent valuation. It is the largest block of non-company data behind the study, and the two lenses that use it — the relative multiple and normalised earnings — carry NONE of the answer: the central is the cash-flow lens alone and those two are published beside it as cross-checks. That is a deliberate change of architecture rather than a change of view, and it is why a block of data the study cannot fully verify does not reach the number a reader acts on.
The Annual Report and Accounts for 2023 as a separate volume	9 Aug 2026	Not obtained from the investor pages. It costs the study nothing: the 2023 audited statements themselves were obtained and read, and the 2024 volume carries the 2023 comparatives, so every 2023 figure has an audited source. Recorded because the record of what was read should match what was actually read.

Where two readings of the same figure disagreed

Every disagreement found between a secondary source and the company's own documents is recorded here with the resolution. In each case the filing was used. The point of the table is not that the study got it right; it is that a reader who has seen the other figure should be able to find out immediately why it is not the one in the model. The last row is a different animal and is included deliberately: there both readings are correct, and what separates them is not a source but a construction.

Where they disagree	The other reading, and where it comes from	The reading this study used, and where it comes from	Why that one
2026 net profit guidance	Press coverage of the guidance raise reported growth in the high-60% range for 2026 net profit.	The management commentary of 14 May 2026 raises 2026 net-profit guidance to mid-to-high-teens growth — taken at the midpoint of the stated band as 16%. The only figure above 50% anywhere in that release is the SHIPPING earnings line, guided to mid-to-high 50% growth, which is a different metric on a different base.	The filing. The press figure is discarded outright and appears nowhere in the model. It reads like a business-unit earnings number reported as a group profit number; the company's own table distinguishes them line by line.
First-quarter 2025 revenue	The company's own management commentary reports first-quarter 2025 revenue of USD 1,204 million.	The reviewed interim statements report 1,181,426 thousand for the same quarter. The company footnotes the difference itself: tanker revenue and direct costs for the first three quarters of 2025 were re-presented, with no effect on gross profit, net profit or earnings.	Both, in their places. The statutory figure is used wherever a statement line is built, so the accounts tie to the filing; the management figures are used for the business-unit analysis, where they are the only basis on which 2025 and 2026 are comparable. Mixing the two inside one table is what the disclosure exists to prevent, so the difference is stated rather than reconciled away.
The edition of the country risk file	A mid-2026 update to the country risk work has been published by its author on his own blog, and two secondary write-ups of that update disagree with each other on the mature-market premium.	The canonical file itself still returns the January 2026 edition, which is what was read: sovereign default spread 0.42%, total equity risk premium 4.87%, mature-market premium 4.23%.	The published file. A number taken from a blog post, or from a write-up of one that another write-up contradicts, is not a source this study can cite and a reader cannot check it. Recorded because a reader who has seen the update would otherwise think the figure is simply stale.
What the published rate per vessel class actually is	Read as the rate a vessel earns in the open market. On that reading the largest class earned 145,000/day in the first quarter of 2026, and the vessels on charter out are a separate, lower, additional exposure. This is how the first edition of this study read it, and it is how the figure is usually quoted.	A BLEND across the whole class, including the vessels already on charter out. The company said so itself on the first-quarter call — the quotation is set out in full with the documents above. Taking the 12 charters back out at their own disclosed rates, the rate an uncommitted vessel must have earned in the same quarter is 199,838/day.	The company's own description of its own disclosure. This is not two sources disagreeing: there is one figure and two readings of what it covers, and only one of them is the company's. The consequence of the wrong reading was not a wrong rate but a double count — the first edition applied the blended rate to the whole class AND added the chartered vessels again at their own rates, charging the drag of the charters twice and understating the fleet. The correction is set out in the study's own section on what changed in this edition.
Whether the tanker revenue gross-up can reach the valuation	The previous edition of the study printed a caveat that said it could not: the ratio “moves the revenue line and never the earnings line, so it cannot affect the valuation”. That reading is stated here because the study itself made it, in print, and it was a falsifiable claim rather than an opinion.	It does affect the valuation. Receivable days were calibrated on 2025 revenue, which carries the 2.74x gross-up, and applied to a forecast revenue line built at 1.60x. Re-based onto the basis the forecast uses, 108.4 days becomes 126.4, which moves the receivable balance, the change in working capital and therefore the cash flow being discounted.	The second reading, and the first is corrected on the face of the study rather than deleted from it. This row is not a source disagreeing with a source: it is the study disagreeing with itself, one edition to the next, on a claim it could have tested and did not. A study that quietly withdraws a claim it has made leaves a reader unable to tell which of its other claims have been tested, so the withdrawal is recorded here with the arithmetic that forced it.

Where they disagree	The other reading, and where it comes from	The reading this study used, and where it comes from	Why that one
What the adopted cost of debt is an average of	The previous edition described the adopted pre-tax cost of debt as a figure “weighted across the drawn book”. On that description a reader would take 5.69% to be a balance-weighted number.	It is the plain arithmetic AVERAGE of three constructions — the marginal drawdown rate on the parent facility (4.45%), the weighted blend of the instruments actually outstanding (5.69%), and the midpoint of the disclosed third-party bank range (7.33%). The genuinely balance-weighted construction is 5.69%, and it is one of the three being averaged rather than the answer.	Both are published, and the average is now described as an average. The figure did not change; only the sentence describing it did, and a sentence that misdescribes a construction is a defect in the same way a wrong figure is.
The beta, measured against two different definitions of the same market	An equal-weight composite of the exchange's own listed names — 12 of them, the subject excluded — gives a slope of 0.690 over the same window (R-squared 0.167, standard error 0.121, 165 observations). This is the measurement the study used before the published index could be obtained.	The FTSE ADX General Index, the capitalisation-weighted index the exchange itself publishes and the share is a constituent of, gives 1.103 on the same returns over the same window (R-squared 0.181, standard error 0.315, 159 observations).	The published index, and the gap between the two is worth more than the answer. This is not two sources disagreeing about a fact — both slopes are correctly computed from the same price history. What differs is how the market itself is defined. A capitalisation-weighted index is dominated by the exchange's largest companies, which is exactly the group the subject sits in, so the share moves with that index more closely than it moves with an average in which the exchange's smallest names count for as much as its largest. The index of the exchange the share is listed on is the market the share actually trades in, so that is what is used; the composite is published beside it and the cost of equity is shown on both, because a difference of this size is a fact about index construction a reader is entitled to see rather than a detail to bury.

Three definitions of net debt circulate in the company's own documents

This is worth its own note, because the figure feeds straight into the bridge from enterprise value to equity value, and the narrowest and widest readings of it are 2,004 million dollars apart.

The definition	At 31 Mar 2026	Used?
As the management commentary DEFINES it in its own footnote — debt and debt-like items consisting of the shareholder loan and current and non-current lease liabilities, less cash	USD 17.1m	No. Read literally the definition omits third-party borrowings, and it does not reproduce the number printed beside it.
As the company PRINTS it — the USD 420 million headline in the same table, which reconciles only when third-party borrowings are added, exactly as the investor presentation's own net-debt bridge (cash, borrowings, leases, other) shows	USD 419.9m	Yes, as the starting point. It is reconciled here from the balance sheet itself: shareholder facility USD 500m plus third-party borrowings USD 403m plus lease liabilities USD 212m less cash USD 695m.
As this study uses it — the printed figure extended by the deferred consideration for the remaining 20% of the acquired tanker business, carried at a present value of USD 301.5m, which is contractually owed and therefore debt-like	USD 2,021.3m	Yes. Separately, the perpetual capital securities of USD 1,978.6m sit outside ALL THREE definitions because the company classifies them as equity; they are deducted in the bridge in their own right rather than netted into debt, so nothing is counted twice and nothing is dropped.

The tests behind the price map, window by window

Section 3 of the study states that the price map is tested before it is allowed to publish a range, and gives the summary scores. A summary score is not evidence a reader can check. The record below is every independent three-month window the test ran on: the date the map was struck from, the date it was scored on, the price at each, and whether the outcome fell inside the middle 50%, 80% and 90% of the distribution the map produced. Each window uses only data available on the day it was struck.

Struck from	Scored on	Price when struck	Price when scored	Inside the middle 50%	Inside 80%	Inside 90%
21 Jun 2024	23 Sep 2024	4.03	5.42	no	no	no
23 Sep 2024	23 Dec 2024	5.42	5.46	yes	yes	yes
23 Dec 2024	24 Mar 2025	5.46	4.92	no	yes	yes
24 Mar 2025	24 Jun 2025	4.92	4.65	yes	yes	yes
24 Jun 2025	24 Sep 2025	4.65	5.73	no	no	yes
24 Sep 2025	24 Dec 2025	5.73	5.85	yes	yes	yes
24 Dec 2025	24 Mar 2026	5.85	4.99	no	yes	yes
24 Mar 2026	24 Jun 2026	4.99	5.97	no	yes	yes
8 windows				3 of 8	6 of 8	7 of 8

Prices are in dirhams. The share listed in June 2023, so there are only 8 independent three-month windows to be had — that is the binding limit on this test and no arrangement of the data removes it. The counts in the last row are the coverage figures quoted in the study, and they are small-sample counts rather than percentages that mean anything on their own: one window either way moves the middle figure by more than a tenth. The one-month horizon has three times as many windows and behaves better, and the width setting itself rests on a much larger group of Abu Dhabi names rather than on this share alone. Both of those are stated in the study.

The same principle applies to the beta and to the price structure in section 2, and here the honest answer is a limitation rather than a table. The regression pairs 159 weekly returns of the share against the index series named in the external documents table, over 3.09 years, and reports a slope of 1.103 with a standard error of 0.315 and an R-squared of 0.181. The paired series itself is not reproduced in these documents, and nor is the daily price history the moving averages and the level ladder are computed from — they are thousands of rows. What a reader can check without them is stated instead: the observation count, the span, the two variants the same returns give against different definitions of the market, and the 52-week high and low, which any price source will confirm. A reader who wants to reproduce the regression needs the two closing series, and this document names exactly which two and over exactly which dates.

Source integrity

Every historical figure in this study — every income-statement line, every balance-sheet line, every cash-flow line, every segment, service line and cost line — traces to the company's own issued financial statements, read from the filing itself rather than from any summary of it. Four complete audited financial years were obtained (FY2022, FY2023, FY2024, FY2025), against a floor of two and a target of four, together with the reviewed interim information for the first quarter of 2026, which is the only quarter of the study year disclosed at the time of writing and is the valuation date.

The company's own website was reached for every one of those documents. Three investor pages were tried; the only failure logged was a single index page returning a server error from this environment, and the documents it lists were obtained through the other two pages on the same site, so no company figure rests on anything but a document downloaded from the company itself.

One source in this document is neither a company filing nor an aggregator, and it is worth being explicit about why it is admissible. The beta is regressed against the FTSE ADX General Index — 3,883 daily sessions from 2 Jan 2011 to 24 Jul 2026, checked against the exchange's own trading calendar before use. An index level is market data, not company data: it is the price at which a market cleared, not a figure the company reported about itself. The rule that admits only the company's own issued documents governs the company's own reported history, and an index level is outside it by construction — there is no filing that could be the source of it. The same is true of the stock's own closing prices. What the rule does require of them is that they are dated, screened before use and named, which they are, here and at the rows they feed.

Aggregators appear in exactly one place: the three comparable operators' statistics pages used in the comparison lens, listed by name and date in the external documents table above and labelled as cross-checks wherever a multiple derived from them appears. No aggregator, broker or press figure is the source of any figure the company itself reports. Where a figure is solved, implied or assumed rather than disclosed — the tanker running cost, the gas day rate, the forecast drivers — the row in the register says so in its own words, and the judgement behind it appears in the judgements table with the evidence that would overturn it.

Testahil · Independent valuation research · Educational analysis, not investment advice. This document contains no recommendation and no target. Sources are listed so that a reader can verify the analysis independently; where a figure is derived or estimated rather than disclosed, that is stated at the figure itself.
