

Testahil — GB Corp S.A.E. (EGX: GBCO)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the GB Corp valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets. All inputs live on the Assumptions sheet — change of volume growth rate, the Auto gross margin, the lender's return on equity, the mark on the associate) and the model reprices, both answers with it.

THE ANSWER HAS TWO SIDES, AND THAT IS THE FINDING RATHER THAN AN EVASION. GB Corp's large minority interest in an unlisted company, and the two bases on which the company itself puts a number on by EGP 11.9bn — about a quarter of the answer. One is the equity-accounted carrying value in its own revenue statements at 30 June 2026; the other is its stated stake applied to the primary round it announced in June 2026. Both are the company's own disclosures and the filings do not decide between them, so neither does this workbook. The two are carried side by side to the last cell. NO FIGURE BETWEEN THEM IS PRESENTED AS AN ANSWER ANYWHERE, deliberately — an average of two things only one of which can be true is not a more cautious answer than either, it is a third answer nobody argued for. The MARK itself is priced across its range, on the sum-of-the-parts sheet and in the first sensitivity grid, at levels somebody has actually argued for rather than at equal steps drawn between the two.

How the answer is built. The sum of the parts is the primary and it IS the answer; the other reads are cross-checked and shown beside it and never averaged into it. Leg 1, GB Auto, is a five-year cash-flow model discounted on a rate that glides to a normalised terminal rate. Leg 2, GB Capital, is the lender's own operating equity times a judgmental price-to-book built from the return it actually earns on that equity. Leg 3 is the associates, on the two bases above. There is no complexity or conglomerate discount anywhere: the uncertainty it used to stand in for is the associate mark, and it is published as two branches instead.

What it is not. It is not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges. The preparer is not licensed by any securities regulator and may hold a position in the security.

Entity note. GB Corp S.A.E. (formerly GB Auto / Ghabbour Auto; renamed March 2023) is an operating company with a captive finance arm: GB Auto (passenger cars, CV&CE, trading, light mobility; Egypt · Iraq · Jordan) plus GB Capital (leasing, factoring, consumer finance, SME lending) and associate stakes in MNT-Halan, Bedaya and Kaf.

Currency. EGP million unless stated. Price EGP 28.98 (2026-09-03 close), read from the study record rather than the market. Historical financials are company disclosure: the FY2023–FY2025 earnings releases and the reviewed consolidated statements to 30 June 2026. Some consolidated balance-sheet lines are grouped from the disclosed segment balance sheets to a house layout — flagged on the Balance Sheet.
