

Testahil — Modon Holding PSC (ADX: MODON) · Revision 2

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

REVISION 2 (9 Aug 2026). This edition restrikes the valuation on the 30-Jun-2026 reviewed balance sheet and the H1-2026 results release (revenue backlog AED 65.4bn, 95% development; H1 real-estate sales AED 26bn) — disclosures the first edition failed to carry into its drivers, a defect surfaced by external audits and accepted. The audits' other accepted findings are implemented throughout: the bridge uses AVAILABLE cash (AED 8.6bn) rather than gross cash including project escrow; the terminal debt weight is DERIVED from the model's own terminal-year balance sheet; working capital is built from components (receivable days, land-bank conversion, payables/advances cover); D&A is charged on the asset base; beta is a regression (1.03 vs an equal-weight panel proxy), no longer an assumption; and the mid-chain hardcoded numerals the audits found are eliminated.

What this workbook is. Every blue cell is an input; every black cell is a formula; green cells link across sheets. The cost of capital is built from the AED government yield net of the sovereign spread, beta and the premium; the development backlog rolls forward in front of you; the DCF waterfall chains EBITDA → EBIT → NOPAT → free cash flow → present value; the terminal block derives its reinvestment rate from growth over return on capital; the statements, ratios and all four lenses chain off the same cells.

THREE THINGS ARE PASTED VALUES. First, audited and disclosed history (the primary record; where a line is both disclosed and derivable, the DISCLOSED figure is carried). Second, the FY2025 four-segment base and the 30-Jun-2026 balance-sheet anchors — pasted once, with the entire forecast chaining off them as formulas. Third, whole-model engine outputs, where each figure is a complete re-run: the Monte Carlo price map, the sensitivity grids and the scenario outputs (run-off, growth-hold, Egypt stress). Their DRIVER VECTORS are published on the Assumptions sheet so each re-run is reproducible, but the grids do NOT redraw when a driver changes; everything else reprices live, and the workbook forces a full recalculation when opened.

The contested judgement, shown both ways. Base: the realised H1-2026 surge normalises but sustains. Run-off (now labelled a stress — the H1 disclosure falsified it as a central path): launches halve and fade. Both DCFs are shown side by side; never averaged.

What it is not. Not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges.

Currency. AED million unless stated. Spot AED 2.83 (7-Aug-2026 close); valuation date 30-Jun-2026, rolled 38 days to the price anchor. Sheets: READ FIRST · Summary · Fundamental Valuation · Assumptions · SOTP Bridge · Segments · Relative & Normalized · DCF · Income Statement · Balance Sheet · Cash Flow · Summary Financials · Monte Carlo · Sensitivity · Per-Share & Ratios · Peer & Sector.
