

Testahil — Riyadh Cables Group Company (Tadawul: 4142)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the Riyadh Cables valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN. Every figure derivable from a driver is a live formula, so you can change a blue cell on Assumptions and watch the model reprice: the cost of capital is built from the risk-free rate net of the sovereign spread, beta and the premium; the discount factors compound from the cost-of-debt glide; the DCF waterfall, the terminal block, the statement roll-forwards, all four lenses and every ratio chain off the same cells.

THREE CLASSES OF CELL ARE PASTED VALUES, and it is worth knowing exactly which. First, audited and disclosed history — the primary record (FY2023-25 income statement and balance sheet, the FY2025 cost-stack base the ground-up build starts from), not a calculation. Second, there is NO flattened unit-build paste: the cable cost stack is built live on the Segments sheet from the disclosed FY2025 materials and conversion figures and the driver paths. Third, whole-model engine outputs, where each figure is a complete re-run of the valuation and so cannot be one formula: the Monte Carlo price map, the sensitivity grids, the DCF scenario bear/bull bounds, the two pasted framings of the contested gross-margin judgement, and the expert-panel median. Everything else — every lens base value, the relative/normalised/book bear and bull bounds, and the anchor roll — is a live formula. Changing a driver reprices the model but does NOT redraw the engine outputs.

How revenue is built. Not as one growth rate. A cable maker is a metal converter: materials (copper and aluminium) are 94.9% of cost of revenue. The build prices a tonnage index as metal content — on its own commodity path — plus a conversion spread whose cost escalates on domestic inflation; gross margin is the OUTPUT of that stack, not an input. The central judgement is the margin the business sustains once the FY2024-25 metal tailwind has passed, anchored on the most recent reviewed actual (H1-2026, 15.26%) rather than the higher FY2025 full-year print (16.24%), and computed both ways.

What it is not. It is not investment advice, a recommendation, or a price target. Values are model outputs

shown as ranges.

Sourcing. FY2022-FY2025 come from the company's own audited consolidated financial statements (KPMG); the FY2026 near-term anchor is the Tadawul-filed reviewed H1-2026 interim. Every input is listed with source and date in the companion bibliography document. No aggregator or broker figure is a build source.

Currency. SAR million unless stated. Spot SAR 104.80 (2026-08-18 close).
