ADNOC Drilling Company P.J.S.C. — valuation model, 9 August 2026

THIS WORKBOOK CALCULATES.

Everything arithmetically derivable from a driver is a live formula. Change a blue cell on the Assumptions sheet and the model recalculates. The model is built in the sheet from the risk-free rate net of the sovereign default spread, the equity beta and the equity cost of capital; the discount rate is the 10-year Treasury yield and the company's own borrowing margin and then taxed; the weights come from net debt to capitalization; the waterfall chains EBITDA to EBIT to NOPAT to free cash flow to present value; the terminal value is a perpetuity growth rate and return on capital; the statements roll forward; and every ratio and per-share figure is a formula.

THREE CLASSES OF CELL ARE PASTED, AND ONLY THREE.

1. Audited and disclosed history. The three years of income statement, balance sheet and cash flow come from the company's financial statements. Where a line is both disclosed and derivable, the DISCLOSED figure is carried — the model does not do arithmetic.
2. The output of the unit build. The rig delivery schedule on the Assumptions sheet is a fleet plan, not arithmetic. The number of rigs expected in service in each year. Everything downstream of it — average deployed rigs, revenue per class, etc. — is arithmetic.
3. Whole-model re-runs. The Monte Carlo sheet, the three grids on the Sensitivity sheet, and the Bear and Base Case Valuation sheets are pasted, because each cell in them is a complete revaluation at a different set of inputs. These sheets CHANGES. Everything else does — including both discounted-cash-flow cases, which are each built live from the unit build expenditure plan and the same cost stack.

One sheet is other companies' data.

The Peer and Sector sheet carries thirteen other listed drillers and oilfield-service companies. Their prices, enterprise values, and other metrics are pasted as observations. The only formulas on that sheet are the enterprise values and metrics relative to ADNOC Drilling's own statements.

BLUE MEANS INPUT, BLACK MEANS FORMULA.

Every blue cell is on the Assumptions sheet, and every one of them carries its source and the construction of the formula.

WHERE THE NUMBERS COME FROM.

Every historical figure traces to ADNOC Drilling's own issued financial statements: the audited consolidated annual statements, the reviewed interim statements for the first quarter and first half of 2026, each downloaded from the company's website. Rig counts, wells drilled, integrated-services rig counts, unconventional revenue — come from the company's own statements, which is the only published source that carries them. The Peer and Sector sheet is the one place third-party data is used to cross-check and for the relative lens, and none of it enters ADNOC Drilling's own statements.

CURRENCY.

The company reports in US dollars, which is its functional and presentation currency. Its shares trade in dirhams. The model runs in dollars and converts per-share figures at the peg of 3.6725 dirhams to the dollar.

WHAT THIS IS NOT.

This workbook contains no rating and no price target. It produces a fair-value range and a distribution of outcomes.

Summary valuation table

	AED per share
Discounted cash flow — continued expansion	5.55
Discounted cash flow — capacity plateau	4.88
Relative multiples	4.06
Book value and sustainable return	5.71
Normalised earnings power	5.03
Weighted central fair value	5.03
Market price, 07-Aug-2026	5.94
Central against the market price	-15.3%

15.0%	5.26	6.24
15.0%	4.73	5.33
100.0%	4.51	5.55

What the lens is measuring

Free cash flow to the firm over five explicit years plus a terminal value, on a fleet plan that keeps building

The same waterfall on a fleet that stops growing once the capacity target is met

What the listed drilling and oilfield-services universe pays for a dollar of EBITDA, weighted to this company's own segment mix

The multiple of book a franchise earning this return on equity justifies

What the fleet already installed earns at the guided margin, with no growth credited

Assumptions — every blue cell is an input; change one and t

Uploaded ADX daily price history for ADNOC DRILL, last close 07-Aug-2026

AED/USD central-bank peg, unchanged since 1997; the rate at which the company itself translates its AED-currency amounts into the USD amounts disclosed in Note 24 of the audited statements

Share capital note 13, FY2025 audited statements: 16,000,000 thousand shares of AED 0.10 each, unchanged

Note 14, 1H-2026 interim: the appointed market maker held 7,349 thousand shares on the company's behalf, all of which are classified as treasury shares in equity (31 Dec 2025: 9,279 thousand)

US 10-year constant-maturity Treasury yield, Federal Reserve H.15 via the St. Louis Fed (series DGS10), 06-Aug-2026

Adjusted default spread for the United States (Moody's Aa1), Damodaran country default spreads and risk premium file, last updated 5 January 2026

Own-stock 5-year weekly regression against the FTSE ADX General Index — the headline index of the exchange actually trades on, held at engine/raw_indices/AE/ADXGENERAL.csv (3,884 sessions, 02-Jan-2011 to 24-Jul-2026, with blanks, duplicate dates, limit-exceeding single-session moves and trading-day density before use). $n=247$ weekly observations, R -squared 0.128, standard error 0.133, 90% interval 0.58 to 1.01. Clears the regression usability gate ($n \geq 20$, R -squared $\geq 5\%$, standard error below the absolute beta), so the first tier of the beta hierarchy applies and no further tiers are needed. SUPERSEDES a prior 0.664 measured against an equal-weight composite of the 18-name UAE price index. The composite under-weights the large-capitalisation names the published index is concentrated in, and it is retained as a robustness check rather than as the regressor. The index series ends 24-Jul-2026 against a 07-Aug-2026 price. The price gap that costs the regression two of roughly 250 weekly observations. Source: engine/adnocdrill_study/beta/ADXGENERAL.csv. Equity risk premium for the Emirate of Abu Dhabi on the rating basis (mature-market premium plus the Abu Dhabi risk premium), Damodaran ctryprem file, 5 January 2026. The United Arab Emirates federal row carries the identifier 064 / 4.87% set

Equity risk premium for the Emirate of Abu Dhabi on the credit-default-swap basis, Damodaran ctryprem file, 5 January 2026

US 5-year constant-maturity Treasury yield, Federal Reserve H.15 via the St. Louis Fed (series DGS5), 06-Aug-2026

Borrowings note 15, FY2025 audited consolidated financial statements (Deloitte & Touche (M.E.), unqualified opinion), and F term loan and revolving facility signed 16 October 2025, USD 2.0 billion committed, 5-year initial maturity, 3-month Term SOFR plus 0.75%. This is the company's own latest and longest-dated debt issue and therefore its margin is the most relevant

Secured Overnight Financing Rate, New York Fed via the St. Louis Fed (series SOFR), 06-Aug-2026

Sovereign credit-default-swap spread for the Emirate of Abu Dhabi, Damodaran ctryprem file, 5 January 2026

Income tax note 30, FY2025 audited consolidated financial statements (Deloitte & Touche (M.E.), unqualified opinion), subject to income tax at 9% on its taxable profits in accordance with the fiscal arrangement with Abu Dhabi. The arrangement for Financial and Economic Affairs effective 1 January 2024.' The same 9% is the UAE statutory corporate rate. Source: Damodaran country file

The same programme with no successor contract: Phase 1 runs off and nothing replaces it

The same programme with no successor contract: Phase 1 runs off and nothing replaces it

EBITDA margin on unconventional revenue, triangulated three ways in the workbook rather than asserted: (i) the disclosed conventional EBITDA margin of 51% applied to conventional revenue implies \$50 million of EBITDA on unconventional revenue, a 7.3% margin; (ii) the same arithmetic on FY2024's disclosed 52% implies a negative margin on a \$117 million revenue base a half-point of rounding in the disclosed margin swings the answer by more than 10% so it is reported and discarded; (iii) the FY2024-to-FY2025 incremental bridge — group EBITDA up \$183 million, of which \$294 million of conventional revenue at 51% explains \$150 million — leaves \$33 million of incremental unconventional revenue, a 5.8% margin. The average of the two usable estimates is 6.5%. The most consequential fact about the unconventional programme: it is a large revenue line that carries almost all of FY2025 disclosed split: \$158 million of the \$692 million was Onshore land drilling

FY2026 is the midpoint of the guided \$0.6-0.8 billion; later years step down toward the stated maintenance capex of \$250 million as the ordered island rigs are delivered

FY2026 is the midpoint of the guided \$0.6-0.8 billion; later years step down toward the stated maintenance capex of \$250 million as the ordered island rigs are delivered

FY2026 is the midpoint of the guided \$0.6-0.8 billion; later years step down toward the stated maintenance capex of \$250 million as the ordered island rigs are delivered

FY2026 is the midpoint of the guided \$0.6-0.8 billion; later years step down toward the stated maintenance capex of \$250 million as the ordered island rigs are delivered

FY2026 is the midpoint of the guided \$0.6-0.8 billion; later years step down toward the stated maintenance capex of \$250 million as the ordered island rigs are delivered

The same FY2026 guidance, stepping down faster once the ordered rigs are delivered and nothing follows thereafter

The same FY2026 guidance, stepping down faster once the ordered rigs are delivered and nothing follows thereafter

The same FY2026 guidance, stepping down faster once the ordered rigs are delivered and nothing follows thereafter

The same FY2026 guidance, stepping down faster once the ordered rigs are delivered and nothing follows thereafter

The same FY2026 guidance, stepping down faster once the ordered rigs are delivered and nothing follows thereafter

FY2025 disclosed depreciation and amortisation over opening property, equipment, right-of-use assets and intangible assets

Average of the three audited years: 5.5%, 6.9% and 5.4%

1H-2026 earnings press release guidance — dividend floor of \$1.05 billion, up 5% year on year

The guided floor is stated as 5% above the prior year

Terminal nominal growth under the continued-expansion framing. Sits below long-run United States inflation of 2.25% plus real regional activity growth, and below the 3.0% ceiling a mature contract driller could justify

Terminal nominal growth under the capacity-plateau framing — the domestic fleet stops growing once the full per-day capacity target is met, so nominal growth is contract escalation only

Terminal after-tax return on invested capital. The company earned a 23% return on capital employed in FY2024 (both disclosed in the MD&A financial summary). 18% fades that toward, but not to, a cost-of-capital of 10% if the fleet is contracted to a single national oil company on terms that have sustained a 23% return through a full cycle, so a fade to parity would contradict the observed record, while holding 23% in perpetuity would capitalise a company that faces renegotiation at every contract roll

Investment in joint ventures, 1H-2026 condensed consolidated interim financial information (reviewed)

Cash and cash equivalents, 1H-2026 condensed consolidated interim financial information (reviewed)

Borrowings, 1H-2026 condensed consolidated interim financial information (reviewed): non-current 1,247,512,221,269

Lease liabilities, 1H-2026 condensed consolidated interim financial information (reviewed): non-current 28,216,977

Non-controlling interests, 1H-2026 condensed consolidated interim financial information (reviewed) — arising from MBPS acquisitions completed in the period

Financial liability, 1H-2026 condensed consolidated interim financial information (reviewed) note 5 — the portion recognised over the non-controlling interests in the acquired regional businesses

Average of the FY2024 and FY2025 returns on average equity, both computed from the audited statements

Total equity at 30 June 2026 less non-controlling interests

The company's own FY2026 guided group EBITDA margin — the midpoint of the \$2.2-2.3 billion range over the \$5 billion revenue guide

Midway between the stated maintenance capital expenditure of around \$250 million and the depreciation that will be carried by 2030

Median of ADES Holding and Arabian Drilling on their own latest reported EBITDA and net debt, at market prices as of 30 June 2026

Median of Helmerich & Payne, Nabors, Patterson-UTI and Precision Drilling

Median of Valaris, Noble and Borr Drilling

Median of SLB, Halliburton, Baker Hughes and Weatherford

Midpoint of the reaffirmed \$2.2-2.3 billion guidance range

The two discounted-cash-flow framings carry equal weight and half the total, because the study refuses to consider the impact of the remaining three lenses split the rest

From the FY2025 segment note

Average of the MENA national-oil-company drillers and the global land drillers

The gap between this and the segment-weighted peer multiple is the whole of the relative lens

The rigs the company already owns or has taken delivery of, at FY2025 realised rates

Highly geared to the denominator: with a cost of equity this close to the growth rate, a small move in either coordinate moves the multiple a long way. Read the sensitivity, not the point estimate
