THE WORKBOOK CALCULATES

Pasted cell class 1 of 3 — audited and disclosed history

Pasted cell class 2 of 3 — the unit build's output

Pasted cell class 3 of 3 — whole-model re-runs

Basis and date

Egyptian International Pharmaceutical Industries Company (EIPICO)

An educational valuation model of a listed Egyptian pharmaceutical manufacturer, built from the company's statements. It is not investment advice, it contains no rating and no price target, and it expresses value as a

Every figure that can be derived from a driver is a live formula. Change a driver on the Assumptions sheet and the glide, the discount factors, the cash-flow waterfall, the terminal block, the three statements, the bridge. This claim is tested, not asserted: a driver test perturbs each input in place, re-evaluates the whole workbook and the headline moves in the right direction.

The FY2023, FY2024 and FY2025 columns of the Income Statement, Balance Sheet and Cash Flow sheets, and operating statistics on Segments. Where a line is both disclosed and derivable, the DISCLOSED figure is carried over from the pasted cell.

The FY2024 and FY2025 pack volumes and realised prices per pack on the Segments sheet. These come from disclosed pack counts against the revenue note's channel split; flattened into a grid the reconciliation would be a formula. Everything downstream of them — every forecast year — is a formula.

The Monte Carlo percentile map and touch ladder, and the Sensitivity grids. Each of those cells is a COMPLETE model at a different input, or a full 50,000-path simulation. THEY DO NOT REDRAW WHEN A DRIVER CHANGES. Those two sheets is a formula.

Blue type is a pasted number. Black type is calculated in the sheet.

The credit-loss and provision charge is the study's single most consequential contested judgement. Frame A treats it as a cost of doing business; Frame B treats it as normalising. Both run all the way through to a value per share at the end. They are never averaged into one number.

Egyptian pounds. Money in millions unless a row says otherwise; per-share figures in pounds; packs and units in millions.

Audited CONSOLIDATED financial statements. Share price 130.05 at 2026-08-06; 168.755750 million shares outstanding as of 31 December.

Weight	How it is built
50.0%	Five explicit years of free cash flow to the firm, discounted on a glide from the current to the terminal cost of capital, plus a terminal value on the growth-over-return reinvestment identity.
50.0%	The identical model with the single contested judgement resolved the other way. Published beside Frame A, never averaged into it.
20.0%	Book value per share multiplied by (sustainable return less growth) over (perpetual cost of equity less growth). EVERY term is live: the sustainable return reads the forecast return-on-equity path, and the perpetual cost of equity reads beta, the terminal risk-free rate and the terminal premium.
15.0%	Three lenses triangulated ON THE SHEET, EACH APPLIED TO THE EARNINGS OF ITS OWN PERIOD — the forward multiple this model's own economics justify on forward earnings, and the company's own four-year mean and a cost-of-equity-adjusted struck peer reference on trailing earnings.
15.0%	The three-year average operating margin applied to forecast revenue, capitalised at the perpetual cost of equity on the payout that the growth rate permits.
100.0%	The discounted-cash-flow weight in full on Frame A, beside the three lenses that do not turn on the contested judgement. The weights sum to one; the cell to the left proves it.
100.0%	THE TWO CENTRES ARE NOT AVERAGED. Weighting both frames inside one number is a straight average of them, which is exactly what this study says it never does.

disclosure — the BOOK reading, published beside the market reading above rather than chosen between in silence. The valuation uses the market reading, because a weighted average cost of capital weights market values: this row drives nothing

Pound-nominal, against a 5% terminal inflation rate — about zero in real terms

Three disclosed years, reconciled to this model's own income statement: 74.508, 151.581, 512.085 — mean 246.058. The first quarter of 2026 annualises to 52.5, but the auditor states two holdins' statements were not received so that quarter is evidence not a run-rate

Below the Gulf listed range for a minority, unlisted, non-controlled stake

MARKET DATA, cross-check layer. The MIDPOINT of the only two disclosed observations (26.7x and 16.0x) — NOT a median of a peer set, and the peers are not named, so it cannot be rebuilt from their filings

This is what sets terminal reinvestment. It is not an assumption and there is no cell to type it into.

Construction still parked at FY2030E has never entered the depreciable base. A perpetuity cannot capitalise profit on capital it never charges.

	ZERO IN EVERY FORECAST COLUMN, BY CONSTRUCTION — gross borrowings are the funding plug. The earlier edition never computed this row at all and its forecast columns were out by up to 6.6% of total assets. The three audited columns carry small residuals (-4.1, +0.2, +0.4 on assets of 10.0bn to 18.3bn, under 0.05%) from grouping the filed statement into these line captions; they are shown rather than suppressed.
