

Testahil — Elsewedy Electric Company S.A.E. (EGX: SWDY)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the SWDY valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN. Every figure that can be derived arithmetically from a driver is a live formula, so you can change a blue cell on Assumptions and watch the model reprice: the cost of capital is built from the risk-free rate, beta and the premium rather than pasted; the discount factors compound from the glide and the income statement, balance sheet, cash flow, ratios and all four lenses chain off the same cells.

THREE THINGS ARE PASTED VALUES, and it is worth knowing which. First, audited and disclosed historical primary record, not a calculation. Second, the segment build: revenue and profit for the three segments the company itself discloses (Cables and its accessories, Constructions and infrastructure, Electrical products and digital solutions) are pasted for FY2025 and grown on their own drivers; only its OUTPUT is carried h and everything downstream of it is formula. Third, the Monte Carlo price map and the sensitivity grids, where each individual cell is a complete re-run of the whole valuation and so cannot be a formula in a grid. Changing a driver reprices the model but does NOT redraw those two grids.

How revenue is built. Not as one growth rate. Each of the three disclosed segments is grown on its own driver — Cables on copper-price growth times FX-translation growth times a modest real-volume assumption; Constructions and Electrical products on a taper of their own recent revenue CAGR — because none of the audited filings discloses a tonnage, order-book or backlog figure to build a literal unit model from. Margins come from the same segment build; group EBITDA margin is an OUTPUT of it, not an input.

What it is not. It is not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges.

Sourcing note, up front. FY2023, FY2024 and FY2025 all come from the company's own audited consolidated financial statements — every income-statement, balance-sheet and segment line is the audited figure, not derivation or a triangulation. Segment revenue ties EXACTLY to consolidated revenue in every year (Note 5-3); segment profit reconciles to consolidated operating profit through an explicit, exactly-reconciling corporate cost load (Note 16 less G&A, net impairment, other expenses and other income). Every input is annotated where it appears and listed with source and date in the companion bibliography document.

Discount convention. Each explicit year is discounted at its own forward cost of capital, gliding 26.6% -> 14.8% on the same easing calendar as the interest forecast; the terminal value is capitalised at the terminal rate and discounted at the year-5 cumulative factor. One date, one price of time. The glide fractions are not a free parameter: they are the cost-of-debt path's own cumulative progress, and the DCF sheet computes them in front of you.

The open question. This company earns just over half its revenue on a hard-currency-linked basis but reports, lists and borrows in Egyptian pounds. The primary model charges the full Egyptian cost of capital. The Fundamental Valuation sheet also shows what the same cash flows are worth if the hard-currency leg is discounted at a hard-currency rate. Both are shown; they are not averaged.

Currency. EGP million unless stated. Spot EGP 105.20 (2026-08-05 close). Sheets: [READ FIRST](#) · [Summary](#) · [Fundamental Valuation](#) · [Assumptions](#) · [SOTP Bridge](#) · [Segments](#) · [Relative & Normalized](#) · [DCF](#) · [Income Statement](#) · [Balance Sheet](#) · [Cash Flow](#) · [Summary Financials](#) · [Monte Carlo](#) · [Sensitivity](#) · [Per-Share & Ratios](#) · [Peer & Sector](#).

NOPAT	-	-
Add back depreciation and amortisation	-	-
Capital expenditure	(8,490)	(13,112)
Change in working capital	-	(2,358)
Free cash flow to the firm	-	-

Cash conversion — operating cash flow as a share of EBITDA, FY2025 45.0%

This single ratio is the crux of the valuation: the company earned far more EBITDA than it converted to

FY26E	FY27E	FY28E	FY29E	FY30E
35,158	41,645	47,603	53,648	59,209
23,052	27,454	31,537	35,687	39,463
4,625	5,282	5,833	6,381	6,940
(16,281)	(16,901)	(16,798)	(16,845)	(17,212)
(17,783)	(10,447)	(8,774)	(8,720)	(8,912)
(6,387)	5,387	11,797	16,503	20,279

cash, because growth was funded through working capital.

Summary financials — the eight-year picture

EGP mn unless stated. Every cell on this sheet is a link or a ratio; nothing is typed twice

EGP mn		FY2023	FY2024
Revenue		152,186	231,982
Revenue growth	-		52.4%
EBITDA		20,035	31,601
EBITDA margin		13.2%	13.6%
EBIT		17,739	29,342
Attributable profit		10,116	17,461
Free cash flow to the firm	-	-	
Net bank debt		16,214	20,903
Invested capital	-	-	
Return on invested capital	-	-	

Return on invested capital is the DCF's NOPAT over the same year's invested capital, which is wh

FY2025	FY26E	FY27E	FY28E	FY29E
281,049	370,030	422,528	466,619	510,440
21.2%	31.7%	14.2%	10.4%	9.4%

post-financing basis and is reported in the terminal-growth reconciliation on the Per-Share & Ra

tios sheet.

Probabilistic price map

A map of price dispersion. It carries no view on value and is never blended with the valuation. Each figure

Horizon	5th	25th
One month — to 2026-09-06	87.47	99.11
Three months — to 2026-11-05	78.30	96.94

Level event	One month	Three months
Finishes 10% or more above spot	23.0%	38.8%
Finishes 10% or more below spot	14.4%	21.2%
Touches 10% above spot at any point	36.9%	63.1%
Touches 10% below spot at any point	25.5%	44.6%

Engine setting	Value
Simulated paths	50,000
Annualised volatility (3-month anchor)	48.4%
Spot price (EGP)	105.20
Anchor date	2026-08-05

ire is an engine output, not a formula.

Median	75th	95th	P(above spot)	
	106.68	114.90	130.17	55.1%
	109.91	124.46	154.19	59.5%

Sensitivity — what the valuation needs the world to do

EGP per share. Each cell is a complete re-run of the model, including the unit build, so these grids are

Terminal cost of capital (rows) x terminal growth (columns)

	3%	4%
12.8%	65.73	69.44
13.8%	58.46	61.14
14.8%	52.43	54.39
15.8%	47.35	48.78
16.8%	43.02	44.06

Explicit-window cost of capital (columns) x terminal cost of capital (rows)

	23.6%	25.1%
terminal 12.8%	78.53	76.22
terminal 13.8%	68.32	66.30
terminal 14.8%	60.20	58.40
terminal 15.8%	53.59	51.98
terminal 16.8%	48.11	46.64

Single-driver sensitivities

Driver	Low	
Beta	81.10	67.57
Exchange-rate path multiplier	53.02	56.67
EBITDA margin shift	32.21	44.44
Working capital / revenue	62.80	59.63
Terminal return on invested capital	50.38	54.34

re engine outputs rather than formulas and do NOT redraw when a driver is changed.

Peer frame and sector context

No clean comparable exists; this is a sanity check, not an independent valuation

Company / frame	Market
Riyadh Cables	Saudi Arabia
Electro Cable Egypt	Egypt
European cable majors	Europe
Regional engineering and construction cor	Gulf and North Africa

Own multiples	Value
Trailing enterprise value / EBITDA	8.67x
Trailing price / earnings	13.00x
Trailing price / book	3.37x
Justified enterprise value / EBITDA applied	6.50x
Justified price / earnings applied	9.00x

Relevance

nearest listed regional cable manufacturer

the only other listed Egyptian cable
manufacturer

closest match on business model — cables plus
projects

the right frame for the roughly 32% that is the
Constructions and infrastructure segment

Caution

far smaller, no contracting arm, lighter balance sheet,
pegged currency

much smaller, domestic, heavily levered, currently
loss-making

developed-market cost of capital; no convertibility risk

project accounting and backlog quality are not
comparable
