

Testahil — Modon Holding PSC (ADX: MODON)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the MODON valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN. Every figure that can be derived arithmetically from a driver is a live formula, so you can change a blue cell on Assumptions and watch the model reprice: the cost of capital is built from the AED government yield net of the sovereign spread, beta and the premium rather than pasted; the development backlog rolls forward in front of you (opening backlog + new sales – recognised revenue); the DCF waterfall chains EBITDA → EBIT → NOPAT → free cash flow → present value; the terminal block derives its reinvestment rate from growth over return on capital; and the income statement, balance sheet, cash flow, ratios and all four lenses chain off the same cells.

THREE THINGS ARE PASTED VALUES, and it is worth knowing exactly which. First, audited and disclosed history — the primary record, not a calculation (where a line is both disclosed and derivable, the DISCLOSED figure is carried). Second, the FY2025 four-segment base — revenue, gross profit and assets for the segments the company itself discloses (Real Estate Development; Asset & Investment Management; Hospitality; Events, Catering & Tourism) — pasted once, with the entire five-year forecast chaining off it as formulas. Third, whole-model engine outputs, where each figure is a complete re-run of the entire valuation and cannot be one formula: the Monte Carlo price map, the sensitivity grids, the DCF bear/bull scenario bounds (the backlog run-off and growth-hold alternatives) and the Egypt-risk stress. Those grids do NOT redraw when a driver changes; everything else reprices live.

How revenue is built. Not as one growth rate. Development revenue converts the disclosed AED 42.6bn development backlog at a visible conversion rate, plus point-in-time land sales, with new launches rolling the backlog forward on the sheet; the other three segments grow on their own drivers (occupancy and GLA for asset management, keys × occupancy for hospitality, the events calendar for ECT). Margins are OUTPUTS of the segment build, not inputs to it.

The contested judgement, shown both ways. Whether the record FY2025-26 development surge persists (base: normalising-but-sustained launches) or fades to backlog run-off is the single judgement that moves this valuation most. Both DCFs are shown side by side on Fundamental Valuation and Summary; they are never averaged.

What it is not. It is not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges.

Sourcing note, up front. FY2023 (Q Holding perimeter), FY2024 and FY2025 all come from the company's own audited consolidated financial statements, retrieved from modon.com investor relations; H1-2026 from the reviewed interim. FY2024 is a perimeter break (the Modon Properties/ADNEC combination; bargain-purchase gain AED 9,192mn) and is dual-framed wherever it appears. Every input is annotated where it appears and listed with source and date in the companion bibliography document.

Discount convention. The explicit window discounts at a single AED cost of capital built on the sheet (the AED curve is flat-pegged to the USD; there is no easing glide to derive, and the discount factors compound in front of you on the DCF sheet). The terminal value is capitalised at the terminal rate and discounted at the year-5 factor. One date, one price of time.

Currency. AED million unless stated. Spot AED 2.83 (2026-08-09 anchor; close 07-Aug-2026).
