

This register lists every source behind the valuation study and the accompanying workbook. It separates the company's own issued documents, which are the only permitted source for anything the company itself reports, from external material used for market context and forecast drivers, and from cross-checks that inform no figure.

1. The company's own issued documents

Obtained from the company's investor-relations page at kimaegypt.com, which serves its filings through the Mist investor-relations portal. Every document was downloaded, opened and read; all are scanned images, so each figure was read from the statement itself and crossfooted against its own subtotals.

Document	Period	Report date	Auditor	Retrieved	What it sources
Audited financial statements	Year to 30 June 2022 (as comparatives)	8 Oct 2023	Central Auditing Organization; PKF Rashed Badr & Co	8 Aug 2026	Opening income statement and balance sheet of the four-year history
Audited financial statements	Year to 30 June 2023	8 Oct 2023	Central Auditing Organization; PKF Rashed Badr & Co	8 Aug 2026	Peak-utilisation reference year; cost-of-sales and selling-cost notes
Audited financial statements	Year to 30 June 2024	23 Oct 2024	Central Auditing Organization	8 Aug 2026	Trough-utilisation year; the one-off investment-property revaluation gain; the repayment of the pound tranche of the project loan
Audited financial statements	Year to 30 June 2025	23 Sep 2025	Central Auditing Organization	8 Aug 2026	The anchor year: note 20 revenue split, the auditor's production and unit-cost table, note 21 cost of sales, note 22 selling cost, note 18 loans, note 14 share capital, note 28 gas price and capacity plates, the appropriation statement
Interim statements, limited review	Three months to 30 September 2025	13 Nov 2025	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	Export volume and price movement; the gas-loss quantification and its unit valuation
Interim statements, limited review	Six months to 31 December 2025	10 Feb 2026	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	Margin confirmation; the partial disposal of the listed stake
Interim statements, limited review	Nine months to 31 March 2026	20 May 2026	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	The balance sheet used in the equity bridge; the company's own budget column; the translation loss on the dollar debt

Also indexed on the same portal but not used: annual statements for 2009 to 2021, and quarterly board and shareholder-structure disclosure reports through 30 June 2026. The portal's audit-reports section holds only audit-committee reports and its newest item covers the period to 31 December 2021; the statutory auditor's reports for the years used here are bound inside the annual statements above.

2. Market data, sovereign data and macroeconomic series

Item	Value used	As of	Source	Where it is used
Share price	EGP 13.98	6 Aug 2026	Exchange close, from the study's own	Market capitalisation, the equity weight in the cost of

			price library	capital, and every comparison
Share count	1,986,578,999	30 Jun 2025	Note 14 of the audited statements	Per-share values. NOT taken from an exchange page or an aggregator
Ten-year government bond yield	23.00%	6 Aug 2026	Market quote	The observed risk-free rate before normalisation
Treasury bond coupon cross-check	23.098%	2026	New EGP 120.9bn issue to May 2029	Corroborates the sovereign yield above
Sovereign rating and default spread	Caa1, 6.37%	Jan 2026	Country-premium workbook, Egypt row, read from the original file	Normalisation of the risk-free rate, rating basis
Country equity risk premium	9.71%	Jan 2026	Same workbook	The country component of the equity premium
Total equity risk premium	13.94% (rating) / 9.42% (CDS)	Jan 2026	Same workbook, both columns	Cost of equity, published on both bases
Exchange rate	EGP 49.79 per US dollar	7 Aug 2026	Market quote	The starting point of the currency path
Urea, granular, free on board Egypt	US\$545 per tonne	7 Aug 2026	Listed futures contract	The export-price anchor and the crux sensitivity
Egyptian headline inflation	14.3% year on year	June 2026	Official statistics	The domestic cost escalator
Policy rate	19.00 / 20.00% corridor	9 July 2026	Central bank decision	Context for the rate path; the terminal build uses the inflation target, not this rate
Treasury-bill yields	24.86% to 25.52% by tenor	6 Aug 2026	Secondary market quotes — the central bank's own auction pages were unreachable	Context only; no valuation figure depends on them

3. External context and forecast drivers

These sources inform forward-looking judgements. None of them is a source for any figure the company reports about itself.

Subject	What it establishes	Source type	Date
Egyptian gas curtailment	Industrial gas rationing after the interruption of Israeli export flows; producers curtailed by up to half	Energy and commodity press	Mar 2026
Regional urea supply shock	Middle East conflict lifting global urea above US\$700 a tonne; the region carries about 35% of seaborne trade	Commodity research	Mar 2026
Fertilizer quota regime	Cabinet decision 170 of 24 November 2021 and trade-ministry decree 241 of 2021; the September 2025 revision; the 2026 switch to a 10% ad-valorem export duty	Government decisions, as recorded in the auditor's reports and in press coverage	2021 to 2026
Egyptian nitrogen capacity	About 7.2 to 7.3 million tonnes a year across the named producers	Industry analysis	Mar 2026
Local fertilizer prices	Subsidised supply at about EGP 6,000 a tonne against open market sacks at EGP 1,400 to 1,600 per 50 kilograms	Egyptian press	2025-2026
Project contractor and scope	The engineering consortium, the contract value and the settlement history of the earlier project	Contractor announcements, corroborated against the notes to the audited statements	2022 to 2025
Carbon border adjustment	European reporting obligations reaching Egyptian nitrogen exports from	Auditor's report; European policy	2025-2026

4. Cross-checks, used to test and never to build

Cross-check	What it was used for	Why it is not a build source
Financial data aggregators	Confirming the ticker, the fiscal-year convention and the order of magnitude of market capitalisation	Aggregators restate and normalise; the company's own statements are the only permitted source for its reported figures
Press reporting of half-year profit	A first sanity check on the interim result before the filing itself was read	Superseded entirely by the reviewed statements
Peer capacity and location	Framing the freight disadvantage of an inland plant	Peer data informs comparison only, never this company's own history

5. Access notes, including what could not be obtained

REACHED — <https://www.kimaegypt.com/InvestorsRelations.aspx>

Company's own IR page. This session's original proxy refused CONNECT (403); the user opened an unrestricted environment and a network-enabled helper session retrieved the page and every filing. The page embeds the IR portal from mistnews.com (the company's IR-portal provider); the PDFs are the company's own issued filings.

REACHED — <https://www.mistnews.com/ir/ir.aspx?sk=1034241017>

KIMA's IR portal (Financial Statements / Disclosure Reports / Audit Reports / Share Price / News). Source of all seven filing PDFs; full index in filings/SOURCES.md.

NOT REACHED — <https://www.egx.com.eg/en/CompanyProfile.aspx?ISIN=EGS38201C017>

Exchange disclosure portal behind an F5/TSPD JS bot-challenge: WebFetch 503, curl got the challenge HTML, headless Chromium reset — even from the unrestricted helper. Exchange-stated share count therefore NOT obtained from EGX; the share count is taken from note 14 of the audited FY2024/25 statements instead (1,986,578,999 x EGP 5).

NOT REACHED — <https://www.cbe.org.eg/en/auctions/egp-t-bills>

CBE auction pages WAF-blocked ('requested URL was rejected') from the helper too; T-bill yields carried from secondary quotes (investing.com), labelled as such.

Two consequences follow and both are stated in the study itself. The share count comes from the audited statements rather than the exchange, and treasury-bill yields are secondary quotes rather than auction results. Neither substitution touches a figure the company reports about itself.

6. How a reader can check this study

Every historical figure in the study appears in the accompanying workbook on the sheets marked historical, carried exactly as issued. Every forecast figure is a formula on those sheets, driven by the assumptions sheet, and each assumption carries its source in the adjacent column. A reader who disagrees with an assumption can change it and watch the valuation move; the two grids that do not redraw are labelled on their own sheets, because each of their cells is a separate run of the whole model.
