

Borouge plc

Bibliography, input register and judgement record

Companion to the Borouge plc valuation study dated 9 August 2026

What this document is for. A valuation is only as good as what it is built from. This document lists every source the study used, every input it carries, every judgement it made and every search that came back empty — so that a reader can check the study rather than take it on trust.

The rule the study works to. Any figure Borouge itself reports comes ONLY from a document Borouge itself published. Data vendors, broker notes and press coverage appear in this study in exactly one place — as a cross-check on peer valuations — and they are labelled as such wherever they appear. If an official document could not be obtained, the study would stop and say so rather than substitute a weaker source.

1 Primary documents

All 21 documents below were downloaded from Borouge plc's own investor-relations library. On 9 August 2026 every one of them was downloaded again and compared byte-for-byte against the copy this study was built from: 21 of 21 matched exactly. That check is what allows the study to state that no figure has passed through an intermediary.

Table 1 — The primary documents. Paths are relative to www.borouge.com. The index they were all taken from is at </en/investor-relations/Pages/reports-results.aspx>.

Four complete audited financial years were obtained — 2022, 2023, 2024 and 2025 — each a full statutory set with an auditor’s report, a statement of financial position, a statement of profit or loss, a statement of changes in equity, a statement of cash flows and notes. The study carries 2023, 2024 and 2025 as model columns and holds 2022 as a check: 2022 was the post-listing peak-price year, and including it would flatter every through-cycle average the study takes. That exclusion is a stated judgement, not a gap in the record.

Both quarters of the study year already disclosed — the first quarter and the first half of 2026 — were read before the forecast was built, not after. They are where the feedstock step-up and the freight increase come from.

Also used, and what for	Role
Abu Dhabi Securities Exchange monthly market-statistics workbooks, December 2025, March 2026 and June 2026	Cross-check on traded shares and market capitalisation only. Never a source for a reported figure
Daily price history for Borouge from listing on 3 June 2022 to 7 August 2026, 1,048 sessions	The technical section, the probability bands, and the measured beta

2 The full input register

Every input the model carries, with its value, the date it refers to, and the source and construction behind it. Nothing in the model is outside this register.

2.1 Company inputs — read off Borouge's own documents

224 inputs. Every one of them comes from an audited or reviewed financial statement, a management discussion and analysis, an earnings presentation or an earnings release published by Borouge plc.

Input	Value	As at	Source and construction
aed per usd	3.672	2026-08-07	AED/USD central parity. The dirham has been pegged to the US dollar at this rate since November 1997 and the Central Bank of the UAE has maintained it without interruption since

Table 2 — The company input register. Values in USD thousand unless the source text says otherwise.

2.2 Market, country and industry inputs

46 inputs. These set the cost of capital, the macro backdrop and the forecast price direction. None of them is a source for a figure Borouge reports.

Input	Value	As at	Source and construction
adx index last	9,828.14	2026-07-24	FTSE ADX General Index close on 24 July 2026, the last session in the series. It ends two weeks behind the share price series, which is immaterial for a five-year weekly regression but is the as-of date any beta quoted from it carries
adx index sessions	3,883	2026-07-24	FTSE ADX General Index daily history, 2 January 2011 to 24 July 2026, 3,883 sessions after the cleaning gate (one stale no-trade row dropped). This is the regressor for the company's own beta: the beta rule requires a stock's own price history against its OWN local index. Trading-day density runs 238-252 sessions a year against an ADX calendar of about 250, and no session closes unchanged, so the series carries no stale-price artefact that would bias a covariance downward
analyst consensus target	2.78	2026-08-09	Consensus of 13 analysts, average target price AED 2.78, reported by stockanalysis.com on 9 August 2026; a second panel of 5 analysts on Investing.com averages AED 2.66 with a high of AED 3.048 and a low of AED 2.299. THIRD-PARTY OPINION, recorded for contrast only and used in no calculation
b4 accretion post rampup	0.1000	2026-03-19	ADNOC press release, 19 March 2026 — approximately 10% annual earnings accretion to Borouge plc after Borouge 4 ramp-up
b4 capacity	1,400	2026-03-31	Borouge 4 adds 1.4 million tonnes per annum of polyethylene, making Ruwais the world's largest single-site polyolefin complex — ADNOC and OMV completion releases. Borouge plc markets this volume but does not own the capacity, so it never enters the unit build
b4 cumulative net profit 3y	400	2026-03-19	ADNOC press release, 19 March 2026 — the Asset Usage Agreement is expected to deliver Borouge plc USD 400 million of cumulative net profit over the next three years

b4 owner adnoc	0.7000	2026-03-19	ADNOC press release, 'ADNOC and OMV advance formation of Borouge Group International AG', 19 March 2026 — Borouge 4 is owned 70% by ADNOC and 30% by OMV, and is NOT owned by Borouge plc
b4 recontribution	2,029	2026-03-19	ADNOC press release, 19 March 2026 — recontribution of Borouge 4 into Borouge Group International is 'not expected before 2029', deferred from an original expectation of end-2026. Any model built before 19 March 2026 carries the old date
bgi ownership omv	0.5000	2026-03-31	OMV press release, 'OMV and XRG complete transactions to create Borouge International', 31 March 2026 — at completion Borouge Group International is held 50% by OMV and 50% by XRG, a wholly owned ADNOC subsidiary, under joint control. The 46.94/46.94/6.12 split announced on 4 March 2025 was a pro-forma structure contingent on Borouge plc's free float accepting an exchange that has not happened. Borouge plc minorities were NOT rolled in and Borouge plc remains separately listed on ADX
bgi tender year	2,027	2026-03-19	ADNOC (19 March 2026) and OMV (31 March 2026) — a tender offer converting Borouge plc shares into Borouge Group International AG shares is expected in 2027, subject to market conditions, a BGI equity raise and Securities and Commodities Authority approval. NO EXCHANGE RATIO AND NO IMPLIED VALUATION OF BOROUGE PLC HAS BEEN PUBLISHED as at 9 August 2026; this was verified as absent across all three primary announcements rather than assumed
brent eia	82	2026-07-31	US Energy Information Administration, Short-Term Energy Outlook, July 2026: Brent spot averaging USD 69/bbl in 2025, USD 82/bbl in 2026 and USD 65/bbl in 2027; June 2026 actual USD 85/bbl, down USD 32/bbl from the April 2026 peak
cbuae base rate	0.0365	2026-06-17	Central Bank of the UAE Base Rate, held at 3.65% since 17 June 2026; the dirham peg means the Base Rate tracks the Federal Reserve's policy path
ethane contract real escalation	0	2026-08-09	Real escalation on contracted ethane feedstock. Borouge does not publish the pricing formula of its ADNOC feedstock arrangement, so no escalator can be sourced; the model holds the contracted leg flat in real terms and flags this as an unsourced driver. It is recorded as a negative search result, not as a finding
global growth imf	0.0300	2026-07-08	International Monetary Fund, World Economic Outlook Update, July 2026, 'Global Economy in Crosscurrents of War and Technology', published 8 July 2026, Table 1: global growth of 3.0% in 2026 and 3.4% in 2027, against 3.5% in each of 2024 and 2025
hormuz mou	1	2026-06-18	United States-Iran Memorandum of Understanding signed 18 June 2026 to end the conflict and reopen the Strait of Hormuz, recorded in the US Energy Information Administration Short-Term Energy Outlook, July 2026 edition. The EIA expects most shut-in crude production back near pre-conflict averages by the end of 2026 and the majority back online in the first quarter of 2027. This is the dated, external basis on which the normalisation framing rests — it is an agreement, not a completed restoration of traffic, and Borouge's own July guidance still makes recovery conditional on freedom of navigation
maintenance capex	320	2026-08-09	Steady-state maintenance capital expenditure, USD million a year. The three audited years ran 199, 167 and 308; 2026 is guided below 300. The forecast carries 320 from 2027 because the 2025 reassessment of asset useful lives defers replacement spending without removing it, and a plant running above nameplate consumes maintenance faster than one running below it
mature erp	0.0423	2026-01-05	Aswath Damodaran, same file, United States row: Aa1, adjusted default spread 0.23%, country risk premium 0.23%, equity risk premium 4.46%, sovereign CDS 0.30%; the mature-market equity risk premium is the US equity risk premium of 4.46% less the US default spread of 0.23%, which is 4.23%, and the same 4.23% is recovered from the UAE row as 4.87% less the 0.64% country risk premium
nci value	26.832	2025-12-31	Non-controlling interests carried at their book value of USD 26.832 million from the FY2025 audited balance sheet. The minority holds 0.9% of group profit, so a market-value uplift on it would not move the per-share result at the second decimal
operating rate recovery year	2,032	2026-01-31	Producer consensus on the return to 1992-2021 average operating rates moved out to 2032, from 2030 a year earlier — ICIS Asian Chemical Connections, 'Five Forecasts for Global Chemical Markets in 2026', January 2026. This is why the forecast benchmark path settles below the 2023-2024 level rather than returning to it
pe capacity growth	0.2200	2026-05-29	Global polyethylene nameplate capacity rising 22% between 2026 and 2034, from 158 million tonnes to 193 million tonnes, per OPIS in the Asia Petrochemical Industry Conference compiled proceedings of 29 May 2026, hosted by the Singapore Chemical Industry Council. ICIS material in the same proceedings states polyethylene capacity additions exceed demand growth until 2030
peer borouge market	(table — see the study)	2026-08-09	stockanalysis.com, Borouge plc statistics page observed 9 August 2026. Shown for contrast against the peer table: Borouge's 33.05% EBITDA margin against a peer set clustered between zero and 14% is the whole question the ground-up build has to answer from the feedstock position and the product premia. Aggregator-sourced, cross-check only
peer iqcd	9.9	2026-07-02	TradingView / PitchBook company profile, Industries Qatar (QE: IQCD) enterprise value to EBITDA of 9.90 as at 2 July 2026. Industries Qatar is the closest listed Gulf comparator: a state-affiliated producer of ethylene, polyethylene and other petrochemicals on advantaged regional feedstock
peer lyb 10y median	7.18	2026-08-07	GuruFocus, LyondellBasell ten-year median EV/EBITDA
peer lyb forward	6.5	2026-03-19	Wells Fargo research note on LyondellBasell, cited in an Investing.com report of the upgrade, applying a 2026 EV/EBITDA multiple of approximately 6.5x to an adjusted EBITDA outlook of USD 6.5 billion. Third-party opinion, used only as one of three through-cycle anchors
peer lyb ltm	24	2026-08-07	GuruFocus, LyondellBasell EV-to-EBITDA (trailing twelve months) of 24.00 as at 7 August 2026, reported by the same source as 234% above its ten-year median
peer sector ev ebitda	8.655	2026-01-05	Aswath Damodaran, 'EV/EBITDA Multiples by Sector (Global)', pages.stern.nyu.edu/~adamodar/pc/datasets/vebitdaGlobal.xls, Industry Averages sheet, file dated 5 January 2026, Chemical (Diversified) row, EV/EBITDA 8.655x across 63 firms
peer table	(table — see the	2026-08-09	stockanalysis.com company statistics pages, all eleven observed 9 August 2026, except

	study)		Industries Qatar, whose figures come from TradingView and PitchBook profiles carrying no precise observation date and should be read as approximately July-August 2026. AGGREGATOR-SOURCED market data, used only as a relative-multiple cross-check and never as a source for any reported financial figure
pp capacity growth	0.2000	2026-05-29	Global polypropylene capacity rising 20% between 2026 and 2034, from 125 million tonnes to 151 million tonnes, per OPIS in the same Asia Petrochemical Industry Conference proceedings
sector unlevered beta	1.002	2026-01-05	Aswath Damodaran, 'Betas by Sector (Global)', pages.stern.nyu.edu/~adamodar/pc/datasets/betaGlobal.xls, Industry Averages sheet, file dated 5 January 2026, Chemical (Basic) row: 909 firms, levered beta 1.2560, D/E 0.5048, effective tax rate 14.72%, unlevered beta 0.9123, cash/firm value 8.96%, unlevered beta corrected for cash 1.0021. Chemical (Basic) is the right row: Borouge sells commodity polyethylene and polypropylene against published Northeast Asia benchmarks, not specialty formulations
sector unlevered beta diversified	0.9101	2026-01-05	Same file, Chemical (Diversified) row, unlevered beta corrected for cash, shown as the adjacent classification
sofr	0.0365	2026-08-06	Secured Overnight Financing Rate as published by the Federal Reserve Bank of New York, 3.65% for 6 August 2026
terminal growth	0.0200	2026-08-09	Long-run nominal growth in US dollars for a producer whose owned capacity is fixed. Borouge plc owns no part of the Borouge 4 expansion, so terminal growth cannot embed volume expansion; 2.0% is a price-and-mix rate, below the 4.42% normalised risk-free and below long-run global nominal growth. Sensitised across 1.0% to 3.0% in the study and in the workbook
terminal roc	0.1200	2026-08-09	Terminal return on capital. Borouge earned a return on invested capital in the high teens across the three audited years on advantaged ethane feedstock; 12.0% carries a deliberate competitive erosion toward the level a global polyolefin producer can defend once the current capacity wave is absorbed, while staying above the cost of capital. It sets the terminal reinvestment rate as growth divided by return on capital rather than as a free assumption
uae cds available	0	2026-01-05	Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file — the sovereign CDS and the CDS-based equity risk premium columns both read NA for the United Arab Emirates, so a CDS-basis cost of capital cannot be published for this sovereign and none is invented
uae corporate tax	0.0900	2026-01-05	Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file — corporate tax rate column, 9.00%. Borouge's own effective rate is far above this because its Abu Dhabi operations are taxed under a separate concession-style regime; the model uses the company's own disclosed effective rate, not this headline
uae cpi	0.0210	2026-06-30	Central Bank of the UAE, Quarterly Economic Review, June 2026: inflation forecast of 2.3% for 2026 and 1.9% for 2027; the model carries the 2.1% average of the two as the escalator for domestic cost lines. NOTE: there is no retrievable UAE NATIONAL consumer price index — the Central Bank publishes emirate-level series only (Abu Dhabi +1.4% year on year for January-February 2026, Dubai +3.7% for January-April 2026). Dubai's June 2026 print of +5.7% is running well above the Central Bank's own full-year forecast, which was set on a 12 May 2026 cut-off, so this escalator is more likely too low than too high
uae crp	0.0064	2026-01-05	Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file — country risk premium 0.64%
uae default spread rating	0.0042	2026-01-05	Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file — Moody's rating Aa2, adjusted default spread 0.42%
uae erp default spread basis	0.0465	2026-01-05	Mature-market equity risk premium of 4.23% plus the UAE adjusted default spread of 0.42%, the construction Damodaran describes in the same file as standard practice. Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file
uae erp rating	0.0487	2026-01-05	Aswath Damodaran, 'Country Default Spreads and Risk Premiums', pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/ctryprem.html, file last updated 5 January 2026, United Arab Emirates row read from the original file — total equity risk premium 4.87%, being the mature-market premium plus a country risk premium scaled by relative equity-market volatility
uae gdp growth cbuae	0.0170	2026-06-30	Central Bank of the UAE, Quarterly Economic Review, June 2026 — real GDP growth of 6.2% actual for 2025, forecast 1.7% for 2026 and 9.8% for 2027, the collapse and rebound reflecting the conflict and the recovery of oil output
uae gdp growth imf	0.0310	2026-04-30	International Monetary Fund country page, April 2026 World Economic Outlook vintage — UAE real GDP growth of 3.1% for 2026, against 5.0% in the October 2025 vintage. Reported beside the Central Bank's own 1.7% because the two genuinely disagree by 1.4 percentage points and averaging them would hide that
uae govt yield aed	0.0448	2026-07-30	UAE Ministry of Finance July 2026 Treasury Bond and Sukuk auction, reported by the Emirates News Agency (WAM): the January-2031 T-Bond cleared at a yield to maturity of 4.48%, a spread of 4 basis points over the comparable US Treasury; AED 1.1 billion issued against AED 4.83 billion of bids, 4.4 times covered. This is the SECONDARY-market-clearing yield on the same bond whose Final Terms are cited below, and it supersedes the January issue coupon as the current local risk-free observation. Government of the United Arab Emirates acting through the Ministry of Finance, Final Terms dated 29 January 2026, Treasury Bonds Programme, Series AED01826C264: aggregate face amount AED

			550,000,000, issue price 100%, issue date 29 January 2026, maturity date 29 January 2031, coupon 3.90% fixed per annum payable semi-annually; listed on Nasdaq Dubai
uae govt yield aed issue coupon	0.0390	2026-01-29	Government of the United Arab Emirates acting through the Ministry of Finance, Final Terms dated 29 January 2026, Treasury Bonds Programme, Series AED01826C264: aggregate face amount AED 550,000,000, issue price 100%, issue date 29 January 2026, maturity date 29 January 2031, coupon 3.90% fixed per annum payable semi-annually; listed on Nasdaq Dubai. Carried as the issue-date observation; the same bond yielded 4.30% at the May 2026 auction and 4.48% at the July 2026 auction, so the local curve rose materially across the first half of 2026
us default spread	0.0023	2026-01-05	Aswath Damodaran, same file, United States row: Aa1, adjusted default spread 0.23%, country risk premium 0.23%, equity risk premium 4.46%, sovereign CDS 0.30%
ust 10y	0.0465	2026-08-07	US 10-year Treasury note yield, 4.65% on 7 August 2026

Table 3 — The market, country and industry input register.

2.3 Forecast drivers

The drivers below are the study's own forward assumptions. Each is anchored on something disclosed, and the anchor is named.

Driver	Path 2026-2030	Construction	Anchor
Polyethylene utilisation	0.8600 · 1.02 · 1.03 · 1.03 · 1.03	Shipping normalises	The rates the plant demonstrated in 2024 and 2025
	0.8000 · 0.8500 · 0.9300 · 1 · 1.02	Disruption persists	
Polypropylene utilisation	0.9000 · 1 · 1.01 · 1.01 · 1.01	Shipping normalises	The rates the plant demonstrated in 2024 and 2025
	0.8600 · 0.9000 · 0.9600 · 1 · 1.01	Disruption persists	
Polyethylene benchmark, USD/t	1,010 · 900 · 860 · 870 · 885	Shipping normalises	Published capacity growth of 22% to 2034 against demand growing with world output
	1,060 · 1,030 · 960 · 910 · 890	Disruption persists	
Polypropylene benchmark, USD/t	1,050 · 930 · 890 · 900 · 915	Shipping normalises	Published capacity growth of 20% to 2034
	1,105 · 1,070 · 995 · 940 · 920	Disruption persists	
Polyethylene premium, USD/t	260 · 210 · 200 · 200 · 200	Shipping normalises	The company's own through-the-cycle premium guidance
	300 · 275 · 240 · 215 · 200	Disruption persists	
Polypropylene premium, USD/t	165 · 145 · 140 · 140 · 140	Shipping normalises	The company's own through-the-cycle premium guidance
	195 · 180 · 160 · 148 · 140	Disruption persists	
Selling and distribution, USD/t sold	150 · 100 · 82 · 83 · 85	Shipping normalises	H1-2026 actual on the re-routed lane, against the audited three-year level on the direct route
	172 · 165 · 140 · 110 · 90	Disruption persists	
Share of feedstock bought at market price	0.5500 · 0.3500 · 0.3000 · 0.3000 · 0.3000	Shipping normalises	H1-2026 disclosure that propylene was bought at market prices while the conversion unit was idled
	0.6200 · 0.5800 · 0.4500 · 0.3500 · 0.3000	Disruption persists	

Table 4 — The forecast drivers, both constructions. The two differ only in utilisation, benchmark prices, premia, freight and the feedstock mix — that is, only in how long the shipping lane stays impaired.

3 Judgements, and what would overturn each one

These are the places where the study chose. Each is stated with the reasoning and with the specific observation that would prove it wrong.

Judgement	What the study did	What would overturn it
Which beta to use	Neither. Both are published: the share's own five-year weekly regression against the FTSE ADX General Index, giving 0.415, and a sector bottom-up beta re-levered to 1.121. The two are carried side by side to a value per share everywhere they appear	A longer trading history or a wider free float that let the share's own regression pass a strong-instrument test rather than a minimum one. A rising R-squared would settle it empirically
Which index to regress against	The FTSE ADX General Index, the company's own local market index. An earlier revision of this study used an equal-weight basket of the other listed UAE names, adopted only because no index series was available; that basket gives 0.271 against the index's 0.415. An equal-weight basket over-weights small, thinly traded constituents and understates covariance with a large name, so the capitalisation-weighted index is the correct measure and the basket is retained as a cross-check	A free-float-weighted index series that excluded the subject, which would remove even the sub-one-per-cent self-covariance the current regressor carries
Whether thin trading explains the low beta	No. A lead-lag correction for infrequent trading was run and moves the estimate DOWN to 0.351, not up. So the low reading is not a stale-price artefact	A different correction method giving a materially higher estimate
Whether the 2026 cost step is permanent	Not decided. Two full constructions are built and published side by side, differing only in how long the shipping lane stays impaired	Full-year 2026 results. Feedstock back toward the low 300s per tonne confirms the temporary reading; a figure still near \$395 confirms the other
Whether to carry the H1-2026 realisation residual	No. The forecast carries the audited three-year mean rather than the wider half-year figure, on the ground that the widening is shortage pricing rather than a durable improvement in what customers pay	A second and third consecutive half-year at the wider residual
Whether to include FY2022 in the historical averages	No. It is the post-listing peak-price year and would flatter every through-cycle average. It was obtained and read, and is held as a check	Evidence that 2022 pricing represented a durable level rather than a peak
How to value Borouge 4	As an operator fee stream worth about \$2,505m, never as owned capacity. The sponsors quantify the fee two ways — a cumulative three-year figure and a percentage accretion — and they do not agree, so the LOWER is carried and the gap disclosed	Publication of the recontribution terms, or an ownership interest actually transferring to Borouge plc
What terminal growth to use	2.0%, long-run dollar inflation, on the specific ground that the company's OWN capacity is fixed — the expansion at its site belongs to its parents	An announced expansion that Borouge plc would actually own
Which tax rate to use	The company's own three-year mean effective rate of 28.74%, not the 9% federal headline. Borouge is taxed under the emirate-level regime that pre-dates the federal tax	A change in the fiscal regime applying to the group, or a sustained effective rate at a different level
Whether to use the peer median multiple	No. Nine of eleven peers are loss-making and two have no defined multiple, so the median of 13.4x measures a collapsed denominator. Three named through-cycle anchors are used instead	A recovery that restores peer profitability, at which point a live median becomes meaningful again
Which risk-free rate construction to use	The dollar construction at 4.42%, because the company reports, borrows and sells in dollars. The dirham construction gives 4.06% and the gap is reported rather than reconciled away	A change in the peg, which would make the two constructions genuinely different questions rather than two routes to the same one
Whether the related-party debt is at arm's length	Yes, and it was tested rather than assumed. The parent facilities price at 5.52% against an arm's-length marginal cost of 5.55% and a sovereign floor of 5.07%. The gap is 0.03%	A refinancing at a materially different margin, or disclosure that the facilities carry terms a third party would not offer
How much weight the probability bands deserve on this share	Less than usual, and the study says so. Tested over the 12 independent windows the history allows, the bands scored -0.090 against their benchmark — worse, because they are too wide for a share this calm	More trading history. The share has traded for 4.17 years and the test needs more windows than that allows

Table 5 — The judgement record.

4 What was searched for and not found

A study is shaped as much by what is missing as by what is there. Each search below came back empty, and each row says what the study did instead of filling the gap.

Searched for	Where	What the study did instead
The pricing formula of the ADNOC ethane supply arrangement, and any contracted escalation	All four annual reports, all four sets of audited statements, both interim sets and every management discussion	Carried zero real escalation on the contracted leg and flagged it. Inventing a formula would be worse than carrying zero and saying so; the sensitivity shows what a non-zero escalator costs
Segmental profitability — polyethylene against polypropylene operating profit, segment assets, segment capital employed	The same documents. Borouge reports as one operating segment	Allocated cost across products on the disclosed physical drivers, and stated the gap in the study rather than presenting an allocation as a disclosure
A published exchange ratio, valuation or prospectus for the expected tender offer	Borouge, ADNOC and OMV investor relations	Carried the offer as a catalyst and a caveat. No conversion value enters any number in the study
A multi-year capital-expenditure programme	Annual reports and every results disclosure. The company guides the year ahead only	Set steady-state maintenance capital spend from the company's own three-year outturn against its current-year guide, flagged it as the one materially top-down driver, and sensitised it
A sovereign credit-default-swap quote for the United Arab Emirates	The published country risk file, which carries CDS-based spreads for many sovereigns but not this one	Published both equity risk premium bases on the rating basis and stated the absence rather than borrowing a neighbouring sovereign's quote
Direct access to the exchange's own web portal	adx.ae — refused with an HTTP 403 at the network layer on every attempt	Not needed. Every statement was obtained from the company's own library, and the exchange's monthly statistics workbooks were obtained separately for the market-capitalisation cross-check

Table 6 — The negative results.

5 Where the numbers disagree between sources

Two places, and both are reported rather than reconciled.

Disagreement	The two figures	How the study handles it
The risk-free rate under a hard currency peg	4.42% built in dollars against 4.06% built from the dirham government bond	Uses the dollar construction, because the company reports and borrows in dollars, and reports the gap in the study rather than averaging it away
The two quantifications of the Borouge 4 fee	\$400m a year implied by the disclosed three-year cumulative profit, against \$119m implied by the disclosed percentage accretion	Carries the LOWER and shows both in the workbook. They come from the same press release and cannot both be right
UAE growth forecasts	1.7% from the central bank against 3.1% from the IMF for the same year	Neither drives a driver. Borouge sells into more than ninety countries, so domestic growth is context rather than an input. UAE inflation IS used, and only for the domestic fixed cost leg

Table 7 — Where sources disagree.

6 Where an aggregator was used, and where it was not

Used, in exactly one place. The eleven listed peers' multiples and margins in the study's peer table come from market-data aggregators, observed on 9 August 2026. They are used to demonstrate that the peer set cannot produce an honest live multiple — nine of eleven are loss-

making — and to cross-check the through-cycle anchors. They are labelled as a cross-check everywhere they appear.

Not used, anywhere. No aggregator, broker note, press summary or search-result extract is the source of any figure Borouge itself reports. Revenue, volumes, prices, costs, the balance sheet, the cash flow, the tax rate, the debt book and the share count all come from the company's own published documents listed in Table 1 — every one of which was re-downloaded and verified byte-for-byte identical before this document was written.
