

## **ADNOC Distribution — valuation model**

**THIS WORKBOOK CALCULATES**

**BLUE IS AN INPUT, BLACK IS A FORMULA**

**ONLY THREE KINDS OF CELL ARE PASTED — 1. AUDITED  
AND DISCLOSED HISTORY**

**2. THE OUTPUT OF THE UNIT BUILD**

**3. WHOLE-MODEL RE-RUNS**

**THE CONTESTED JUDGEMENT IS CARRIED BOTH WAYS**

**WHERE TO START**

Everything that can be derived from a driver is a live formula. Change a driver on the Assumptions sheet and the glide, the discount factors, the cash-flow waterfall, the terminal block, the statements and every ratio all move.

That is the whole colour code. A blue cell is a number that came from somewhere; a black one is computed above it.

The FY2023, FY2024 and FY2025 statement columns and the disclosed operating figures (volumes, station capacity and profit). Where a line is both disclosed and derivable, the DISCLOSED figure is carried, because that is what the market sees.

The opening volumes, prices and margins per litre that the forecast grows from. Flattening the reconciliation grid would make it unreadable.

The probability map on the Monte Carlo sheet and the grids on the Sensitivity sheet. Each of those cells is a snapshot of the entire model at a different setting. THEY DO NOT REDRAW WHEN A DRIVER CHANGES. Every other number is derived from them.

Inventory movements were AED 254m in FY2024, AED 335m in FY2025 and AED 762m in the first half of 2026. Inventory volume growth of 1.6% in that half. Frame A normalises them to zero from FY2027; Frame B carries the FY2026 inventory. Both run all the way through to a value per share and they are NEVER averaged together.

Summary for the answer, Assumptions for every driver, Segments for the volume and margin build, DCF for the terminal block, SOTP Bridge for the enterprise-to-equity walk and the terminal share of value.

| Summary valuation                                                                       | Frame A (AED) |
|-----------------------------------------------------------------------------------------|---------------|
| Discounted cash flow                                                                    | 4.45          |
| Normalised earnings power                                                               | 4.22          |
| Relative multiples                                                                      | 5.09          |
| Book value and sustainable return                                                       | 3.58          |
