

## Testahil — Elsewedy Electric Company S.A.E. (EGX: SWDY)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the SWDY valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN. Every figure that can be derived arithmetically from a driver is a live formula, so you can change a blue cell on Assumptions and watch the model reprice: the cost of capital is built from the risk-free rate, beta and the premium rather than pasted; the discount factors compound from the glide and the income statement, balance sheet, cash flow, ratios and all four lenses chain off the same cells.

THREE THINGS ARE PASTED VALUES, and it is worth knowing exactly which. First, audited and disclosed — the primary record, not a calculation. Second, the segment build: revenue and profit for the three segments the company itself discloses (Cables and its accessories, Constructions and infrastructure, Electrical products and digital solutions) are pasted for FY2025 and grown on their own drivers; only its OUTPUT is carried here and everything downstream of it is formula. Third, whole-model engine outputs, where each figure is a complete re-run of the entire valuation and so cannot be a single formula: the Monte Carlo price map, the sensitivity grids, the DCF scenario bear/bull bounds, the multi-leg currency-of-discounting alternative (its USD cost of capital IS a live formula; the leg-by-leg USD discounting is the engine's), and the expert-panel legs. Everything else — including every lens base value, the relative/normalised/book bear and bull bounds, and the anchor-date roll — is a live formula. Changing a driver reprices the model but does NOT redraw the engine outputs.

How revenue is built. Not as one growth rate. Each of the three disclosed segments is grown on its own driver — Cables on copper-price growth times FX-translation growth times a modest real-volume assumption; Constructions and Electrical products on a taper of their own recent revenue CAGR — because none of the audited filings discloses a tonnage, order-book or backlog figure to build a literal unit model from. Margins come from the same segment build; group EBITDA margin is an OUTPUT of it, not an input.

What it is not. It is not investment advice, a recommendation, or a price target. Values are model outputs shown as ranges.

Sourcing note, up front. FY2023, FY2024 and FY2025 all come from the company's own audited consolidated financial statements — every income-statement, balance-sheet and segment line is the audited figure, not derivation or a triangulation. Segment revenue ties EXACTLY to consolidated revenue in every year (Note 5-3); segment profit reconciles to consolidated operating profit through an explicit, exactly-reconciling corporate cost load (Note 16 less G&A, net impairment, other expenses and other income). Every input is annotated where it appears and listed with source and date in the companion bibliography document.

Discount convention. Each explicit year is discounted at its own forward cost of capital, gliding 26.7% -> 15.3% on the same easing calendar as the interest forecast; the terminal value is capitalised at the terminal rate and discounted at the year-5 cumulative factor. One date, one price of time. The glide fractions are not a free parameter: they are the cost-of-debt path's own cumulative progress, and the DCF sheet computes them in front of you.

The open question. This company earns just over half its revenue on a hard-currency-linked basis but reports, lists and borrows in Egyptian pounds. The primary model charges the full Egyptian cost of capital. The Fundamental Valuation sheet also shows what the same cash flows are worth if the hard-currency leg is discounted at a hard-currency rate. Both are shown; they are not averaged.

Currency. EGP million unless stated. Spot EGP 130.00 (2026-09-03 close). ## Per-share and ratio analysis

The indicator set for a diversified industrial with a contracting arm. Every ratio is a formula off the state

| Measure                                           | FY2023 | FY2024 |
|---------------------------------------------------|--------|--------|
| Earnings per share (EGP)                          | 4.73   | 8.16   |
| Book value per share (EGP)                        | 16.70  | 25.84  |
| Free cash flow per share (EGP)                    | -      | -      |
| Gross margin                                      | 19.1%  | 18.9%  |
| EBITDA margin                                     | 13.2%  | 13.6%  |
| EBIT margin                                       | 11.7%  | 12.6%  |
| Net margin (attributable)                         | 6.6%   | 7.5%   |
| Return on equity                                  | -      | 38.4%  |
| Return on invested capital                        | -      | -      |
| Net debt / EBITDA                                 | 0.81x  | 0.66x  |
| Interest cover (EBIT / net interest)              | -      | 8.35x  |
| Working capital / revenue                         | 24.1%  | 23.1%  |
| Capital expenditure / revenue                     | -      | 3.7%   |
| Reinvestment rate                                 | 20.1%  | 30.4%  |
| Implied growth (return on capital x reinvestment) | 4.5%   | 7.6%   |

Terminal growth reconciliation: actual NOPAT compound growth FY2023–FY2025 was 26.9%; the impli

ements.

6; the adopted terminal growth is 9.1%, below the blended nominal ceiling of 11.2%.

## Peer frame and sector context

No clean comparable exists; this is a sanity check, not an independent valuation

| Company / frame                           | Market                |
|-------------------------------------------|-----------------------|
| Riyadh Cables                             | Saudi Arabia          |
| Electro Cable Egypt                       | Egypt                 |
| European cable majors                     | Europe                |
| Regional engineering and construction cor | Gulf and North Africa |

| Own multiples                              | Value  |
|--------------------------------------------|--------|
| Trailing enterprise value / EBITDA         | 10.53x |
| Trailing price / earnings                  | 16.05x |
| Trailing price / book                      | 4.16x  |
| Justified enterprise value / EBITDA applic | 6.50x  |
| Justified price / earnings applied         | 9.00x  |

  
**Relevance**

nearest listed regional cable manufacturer

the only other listed Egyptian cable  
manufacturer

closest match on business model — cables plus  
projects

the right frame for the roughly 32% that is the  
Constructions and infrastructure segment

  
**Caution**

far smaller, no contracting arm, lighter balance sheet,  
pegged currency

much smaller, domestic, heavily levered, currently  
loss-making

developed-market cost of capital; no convertibility risk

project accounting and backlog quality are not  
comparable
