

ADNOC Drilling Company P.J.S.C.

Bibliography and input register

Companion to the valuation study of 9 August 2026

Why this document exists. A valuation is only as good as what it was built from. This document lists every source that was read, every number that entered the model with its value and its date, every judgement that was made and what would overturn it, and — just as important — everything that was looked for and could not be found.

The rule that governs it. Every historical figure about ADNOC Drilling comes from the company's own issued financial statements and disclosures, read from an official source. No data vendor, broker note, press report or search-result extract is a source for any figure about the company itself. Third-party data appears in exactly one place — the peer comparison — and is labelled as such.

1. Primary documents read

Document	Period	Status	Signed / issued	Where it was obtained
Reports and consolidated financial statements	Year ended 31 December 2023	Audited — KPMG Lower Gulf Limited, unqualified opinion	12 February 2024	adnocdrilling.ae — investor relations, financial results and presentations
Reports and consolidated financial statements	Year ended 31 December 2024	Audited — Deloitte & Touche (M.E.), unqualified opinion	11 February 2025	adnocdrilling.ae — investor relations
Reports and consolidated financial statements	Year ended 31 December 2025	Audited — Deloitte & Touche (M.E.), unqualified opinion	11 February 2026	adnocdrilling.ae — investor relations
Condensed consolidated interim financial information	Three months to 31 March 2026	Reviewed	May 2026	adnocdrilling.ae — investor relations
Condensed consolidated interim financial information	Six months to 30 June 2026	Reviewed	30 July 2026	adnocdrilling.ae — investor relations
Management discussion and analysis	Full year 2023	Company-issued	February 2024	adnocdrilling.ae — investor relations
Management discussion and analysis	Full year 2024	Company-issued	February 2025	adnocdrilling.ae — investor relations
Management discussion and analysis	Full year 2025	Company-issued	February 2026	adnocdrilling.ae — investor relations
Management discussion and analysis	First quarter 2026	Company-issued	May 2026	adnocdrilling.ae — investor relations
Management discussion and analysis	First half 2026	Company-issued	30 July 2026	adnocdrilling.ae — investor relations
Earnings presentation	Full year 2025	Company-issued	February 2026	adnocdrilling.ae — investor relations
Earnings presentation	Second quarter and first half 2026	Company-issued	30 July 2026	adnocdrilling.ae — investor relations
Earnings press release	Second quarter and	Company-issued	30 July 2026	adnocdrilling.ae —

	first half 2026			investor relations
Earnings call and webcast transcript	Second quarter 2026	Company-issued	30 July 2026	adnocdrilling.ae — investor relations
Corporate presentation	2026	Company-issued	2026	adnocdrilling.ae — investor relations
Daily price history, October 2021 to 7 August 2026	Market data	1,215 sessions, screened for corporate actions and non-trading rows before use	7 August 2026	Supplied price file

The 2023 and 2024 statements were each cross-confirmed against the following year's comparative column and tie to the dollar. Every statement page parsed cleanly except the signed balance-sheet page in each annual report, which is an image; those three pages were read by optical character recognition and then verified by checking that the totals foot and that each year's figures match the following year's comparative column.

2. The input register

Every input to the model, grouped by the layer of research it came from. An input with no source is not permitted to enter the model — the build fails rather than proceeding.

Company — audited and reviewed financial statements

Input	Value	Date	Source and construction

Industry

Input	Value	Date	Source and construction
esc dayrate	0.0150	2026-08-07	Contract day-rate escalator applied to the conventional revenue-per-rig price line. The customer is a single national oil company on multi-year contracts, so realised day rates track a negotiated escalation rather than a spot market. Realised Abu Dhabi onshore revenue per average deployed rig moved from \$18.9 million in FY2023 to \$20.9 million in FY2024 to \$20.1 million in FY2025 (this model's own unit arithmetic on disclosed segment revenue and disclosed rig counts) — a three-year path that is up but not monotone. 1.5% is set at domestic inflation rather than extrapolating the FY2024 step
esc oilfield	0.0150	2026-06-01	Oilfield-services cost escalator, applied to repairs and maintenance, major maintenance and hire of equipment. US producer price index for drilling oil and gas wells (series PCU213111213111) stood at 396.978 in June 2026, down 1.63% year on year with a three-year compound rate of +0.29%. 1.5% sits above the flat recent print and below general inflation, on the view that the recent softness reflects the US land downturn rather than the Gulf market these costs are actually incurred in — the gap is flagged rather than smoothed away

Country

Input	Value	Date	Source and construction
ad cds	0.0046	2026-01-05	Sovereign credit-default-swap spread for the Emirate of Abu Dhabi, Damodaran ctryprem file
ad crp	0.0064	2026-01-05	Country risk premium for the Emirate of Abu Dhabi, Damodaran ctryprem file

ad rating	Aa2	2026-01-05	Moody's rating for the Emirate of Abu Dhabi, Damodaran ctryprem file
erp cds	0.0493	2026-01-05	Equity risk premium for the Emirate of Abu Dhabi on the credit-default-swap basis, Damodaran ctryprem file, 5 January 2026
erp rating	0.0487	2026-01-05	Equity risk premium for the Emirate of Abu Dhabi on the rating basis (mature-market premium plus the Abu Dhabi country risk premium), Damodaran ctryprem file, 5 January 2026. The United Arab Emirates federal row carries the identical Aa2 / 0.42% / 0.64% / 4.87% set
esc general	0.0150	2026-08-07	Escalator for other direct cost and for general and administrative expenses, anchored on United Arab Emirates consumer price inflation (1.25% in 2025, 1.66% in 2024) rounded to 1.5%
esc wages	0.0200	2026-08-07	Staff-cost escalator. United Arab Emirates consumer price inflation ran 1.63% in 2023, 1.66% in 2024 and 1.25% in 2025 (World Bank via the St. Louis Fed, series FPCPITOTLZGARE); 2.0% carries a modest real-wage drift above that for a business competing for skilled rig crews in a tight regional labour market. Applies ONLY to the domestic labour line
fx aed usd	3.672	2026-08-07	AED/USD central-bank peg, unchanged since 1997; the rate at which the company itself translates its AED-declared dividends into the USD amounts disclosed in Note 24 of the audited statements

Global

Input	Value	Date	Source and construction
esc fuel	0.0000	2026-08-03	Fuel and lubricants escalator. This is a globally traded input and is escalated on its own commodity path, NOT on a domestic inflation proxy: Brent closed at \$88.90 on 03-Aug-2026 against a one-year average of \$79.69 and a three-year average of \$79.48

			(US Energy Information Administration via the St. Louis Fed, series DCOILBRENTU). Spot sits roughly 12% above the three-year mean, so a flat nominal path embeds mean reversion in real terms. The company's onshore contracts carry an explicit fuel-escalation pass-through — the 1H-2026 MD&A attributes part of the onshore revenue increase to 'higher fuel escalation' — so this line is close to margin-neutral either way
sofr spot	0.0365	2026-08-06	Secured Overnight Financing Rate, New York Fed via the St. Louis Fed (series SOFR), 06-Aug-2026
us default spread	0.0023	2026-01-05	Adjusted default spread for the United States (Moody's Aa1), Damodaran country default spreads and risk premiums, original ctryprem file, last updated 5 January 2026
ust10	0.0469	2026-08-06	US 10-year constant-maturity Treasury yield, Federal Reserve H.15 via the St. Louis Fed (series DGS10), 06-Aug-2026 close
ust5	0.0440	2026-08-06	US 5-year constant-maturity Treasury yield, Federal Reserve H.15 via the St. Louis Fed (series DGS5), 06-Aug-2026 close

Market

Input	Value	Date	Source and construction
beta raw	0.6640	2026-08-07	Own-stock 5-year weekly regression against an equal-weight ADX composite built from the full committed 18-name UAE price library; n=249 weekly observations, R-squared 0.160, standard error 0.097, 90% interval 0.50 to 0.82. Clears the regression usability gate (n>=24, R-squared>=5%, standard error below the absolute beta), so the first tier of the beta hierarchy applies and no peer beta is needed. Source: engine/adnocdrill_study/beta_reg.py
spot aed	5.940	2026-08-07	Uploaded ADX daily price history for ADNOC DRILL, last close 07-Aug-2026

Analyst judgement

Input	Value	Date	Source and construction
rev per rig regional	8,000.0	2026-07-30	Revenue per regional land rig-year, USD thousands. Derived, not assumed: 1H-2026 Onshore revenue of \$1,031 million less roughly \$35 million of unconventional land drilling leaves \$996 million; the Abu Dhabi conventional fleet at its disclosed FY2025 realised rate accounts for approximately \$920 million of that, leaving about \$76 million earned across an average of roughly 19 regional rigs in the half (8 SLDC rigs from January, 22 MBPS rigs part-period). That is about \$8.0 million per rig-year, roughly 40% of the Abu Dhabi rate, consistent with smaller land rigs on Oman and Kuwait terms
terminal growth A	0.0250	2026-08-07	Terminal nominal growth under the continued-expansion framing. Sits below long-run United States inflation expectations of 2.25% plus real regional activity growth, and below the 3.0% ceiling a mature contract driller could justify
terminal growth B	0.0150	2026-08-07	Terminal nominal growth under the capacity-plateau framing — the domestic fleet stops growing once the five-million-barrel-per-day capacity target is met, so nominal growth is contract escalation only
terminal roic	0.1800	2026-08-07	Terminal after-tax return on invested capital. The company earned a 23% return on capital employed in FY2025 and again in 1H-2026 (both disclosed in the MD&A financial summary). 18% fades that toward, but not to, a cost-of-capital return: the rig fleet is contracted to a single national oil company on terms that have sustained a 23% return through a full commodity cycle, so a fade to parity would contradict the observed record, while holding 23% in perpetuity would capitalise an incumbency that faces renegotiation at every contract roll

unconv ebitda margin	0.0650	2026-08-07	EBITDA margin on unconventional revenue, triangulated three ways in the workbook rather than asserted: (i) the FY2025 disclosed conventional EBITDA margin of 51% applied to conventional revenue implies \$50 million of EBITDA on \$692 million of unconventional revenue, a 7.3% margin; (ii) the same arithmetic on FY2024's disclosed 52% implies a negative margin, but on a \$117 million revenue base a half-point of rounding in the disclosed margin swings the answer by more than the answer itself, so it is reported and discarded; (iii) the FY2024-to-FY2025 incremental bridge — group EBITDA up \$183 million on revenue up \$869 million, of which \$294 million of conventional revenue at 51% explains \$150 million — leaves \$33 million on \$575 million of incremental unconventional revenue, a 5.8% margin. The average of the two usable estimates is 6.5%. This is the single most consequential fact about the unconventional programme: it is a large revenue line that carries almost no profit
----------------------	--------	------------	--

3. Judgements, and what would overturn each one

Judgement	What was decided	Why	What would overturn it
The company is an operating company, not a holding company	Valued on the cash its own fleet generates, primarily by discounted cash flow	Three operating segments with no inter-segment sales, property and equipment two-thirds of total assets, no lending book, no investment property, and only two small equity-accounted service joint ventures	A restructuring that turned the company into a holder of stakes rather than an operator
The valuation runs in US dollars	The model is built in dollars and converted to dirhams at the peg	The company states in its accounts that the dollar is its functional and presentation currency; re-expressing three audited years into dirhams would add translation noise the source data does not contain	A change of functional currency, or the end of the dirham peg
The terminal question is computed both ways rather than resolved	Two full discounted-cash-flow cases, weighted equally, published side by side	The company has explicitly declined to guide beyond 2026 until phasing is fixed, so there is no evidential basis on which to prefer one	Published 2027 and medium-term guidance
The beta is the company's own regression	0.664, from a five-year weekly regression against a local composite	The listing dates from October 2021, so a full five-year window exists and clears the usability standard: 249 observations, R-squared 0.160, standard error 0.097	A materially different beta from a longer record, or a stress episode that breaks the historical correlation. The valuation is more sensitive to this than to any other input
The cost of debt is term-matched, not spot	5.15%, the five-year Treasury yield plus the company's own 0.75% facility margin	A five-year facility should be priced off a five-year rate. The spot floating cost and the trailing accounting rate were both computed and both fail the test that a same-currency corporate cannot borrow below its own sovereign	A new facility priced differently, or a change in the sovereign spread
The unconventional programme earns almost no margin	6.5% EBITDA margin, triangulated two ways in the workbook and averaged there	The company discloses a conventional EBITDA margin separately from the group margin; the difference between them, applied to the disclosed unconventional revenue, is what is left	A disclosed segment margin for the unconventional business, or a materially different group margin once the programme runs off
Revenue per regional rig is roughly 40% of the Abu Dhabi rate	USD 8.0 million per rig-year	Derived by subtracting the Abu Dhabi fleet at its disclosed realised rate from the reported first-half onshore revenue, leaving what the regional rigs earned	A full year of reported regional data, which does not yet exist
Terminal return on invested capital fades to 18%	From a demonstrated 23% return on capital employed	Holding 23% in perpetuity capitalises an incumbency that faces renegotiation at every contract roll; fading to the cost of capital would contradict a record sustained through a full commodity cycle	A contract renewal at materially different terms
Costs escalate one class at a time	A wage index on labour, an oilfield-services index on maintenance and equipment hire, and the commodity's own path on fuel	A single blended index across physically different cost lines manufactures a margin trend that is an artifact of the assumption rather than of the business	Disclosure of the actual contractual escalation mechanics, which are not published
Debt is held flat and only the guided dividend floor is paid	Cash accumulates and net debt turns negative by 2030	The company guides to leverage below 2.0 times and runs at 1.0 times, and the dividend floor is the only distribution it has committed to	Any capital-allocation announcement. This affects the forecast balance sheet, not the enterprise value

4. Negative results — what was looked for and not found

A register of sources is only honest if it records the searches that failed. Each row below is something this study would have used and could not obtain, together with what was done instead.

What was sought	Where	Outcome	What was done instead
Contract tenor, day-rate mechanics and repricing terms	All annual and interim filings, all management commentary, the corporate presentation and the second-quarter 2026 earnings call transcript	Not disclosed anywhere. The company describes its revenue base as "highly contracted" and as supporting visibility "through at least 2030", but publishes no tenor, no rate and no escalation mechanism	Realised revenue per rig-year is derived from disclosed segment revenue and disclosed rig counts, and escalated at domestic inflation rather than at an assumed contractual rate. The gap is flagged in the study caveats
Backlog on the basis other listed drillers report it	All filings	Not published. The accounts disclose USD 19.4 million of unsatisfied performance obligations, which is a revenue-recognition measure covering work already promised and not a contract backlog	The contracted-cash-flow expert treats the five forecast years as the contracted book rather than relying on a published backlog figure, and says so
Guidance for 2027 and beyond	The full-year 2025 results, the first-quarter 2026 results and the first-half 2026 results	Withheld. The company states guidance will be provided "as the phasing for additional rigs and additional OFS volumes is finalized"	The study carries two full cases instead of one, weighted equally, and does not average them
A separately disclosed margin for the unconventional business	All filings and management commentary	Not disclosed. Only a conventional margin and a group margin are published	The unconventional margin is inferred from the difference between the two, by two independent methods that are shown and averaged in the workbook
Segment-level results for the acquired regional businesses	First-quarter and first-half 2026 filings	Not disclosed separately. The regional rigs are consolidated into the Onshore segment	Revenue per regional rig is derived by subtraction and flagged as the least well-supported unit rate in the model
The exchange disclosure portal	adx.ae	Returned an access error from this environment on 9 August 2026	Not required. Every filing was obtained directly from the company, which is the primary source in any case
A dirham-denominated government bond curve	The central bank of the United Arab Emirates and general market data sources	The central bank site returned an access error and the market data source refused the connection	Not required for the valuation, which is built in US dollars because the cash flows are. A dirham-basis cross-check would need this curve and is therefore not published rather than being estimated
Peer rig counts, to compute enterprise value per rig	Peer disclosures	Not gathered. Collecting rig counts on a consistent definition across thirteen peers was beyond what the peer cross-check needed	The relative lens uses enterprise value to EBITDA, which is computable consistently from each peer's own reported figures

5. Third-party data, and where it disagrees

Third-party data appears in exactly one place in this study: the peer comparison. Peer prices are market observations at the close on 7 August 2026; peer revenue, EBITDA, debt, cash and share counts are each company's own reported figures as redistributed by a market data service. That is a cross-check use — the relative lens applies a peer MULTIPLE to ADNOC Drilling's OWN audited and guided EBITDA, so no peer figure enters this company's income statement, balance sheet or cash flow.

Where third-party data is used	What it is	What it is not used for
Peer enterprise values and EBITDA	Thirteen listed drillers and oilfield-service companies, at their own latest reported periods	Any ADNOC Drilling figure
Market interest rates	US Treasury yields and the overnight financing rate, from the Federal Reserve H.15 release	Anything company-specific
Equity risk premium and sovereign spreads	Damodaran country default spreads and risk premiums, file dated 5 January 2026, Abu Dhabi row	Anything company-specific
Commodity and price indices	Brent, US producer price index for drilling oil and gas wells, and United Arab Emirates consumer price inflation, all via the Federal Reserve Bank of St. Louis	Any company revenue or cost figure directly — they set escalation rates only

Discrepancies noted

Figure	Primary source	Elsewhere	Resolution
Current trade and other payables at 31 December 2025	USD 1,039.4 million on the face of the balance sheet	USD 1,030.8 million in the financial-instruments maturity table	Both are correct and neither is an error: the maturity table covers financial liabilities only and excludes non-financial items such as contract liabilities. The balance-sheet figure is used
Total rig count at the end of 2025	140 rigs on the reported basis	169 rigs on the pro-forma basis in the same document	The pro-forma count includes 29 regional rigs from two transactions that had not closed. The reported 140 is used for 2025 and the regional rigs enter from 2026, when they were actually consolidated
Capital expenditure for 2025	USD 805.2 million of cash purchases of property and equipment in the cash-flow statement	USD 772 million described as capital expenditure in the management commentary	The two are defined differently — the commentary figure includes prepaid delivery payments and excludes accruals. The cash-flow statement figure is used, plus intangibles, because it is the audited one

6. Software and method

The model, the figures and both delivered documents are generated from one committed numbers file, so no figure can differ between the study, the workbook and this bibliography. The delivered workbook is verified by an independent recalculation that evaluates every formula and requires each one to reproduce the model, and by a driver test that perturbs every input in place and requires the headline to move in the direction asserted before the test was run. The results of both are reported in the study's quality-control table.
