

Testahil — Sinai Cement Company S.A.E. (EGX: SCEM)

Companion model · Independent Valuation Study · Educational analysis · Not investment advice

What this workbook is. A transparent companion to the SCEM valuation study. Every blue cell is an input; every black cell is a formula; green cells link across sheets.

IT IS FORMULA-DRIVEN, AND THAT CLAIM IS TESTED. Every figure derivable from a driver is a live for you can change a blue cell on Assumptions and watch the model reprice. The cost of equity is built from the risk-free rate NET of the sovereign spread, beta and the premium rather than pasted; the cost of debt is taxed in the sheet; the weights come from net debt and market capitalisation; the terminal rate is built from its own components; the glide fractions are visibly derived from the cost-of-debt path; the discount factors compound; the DCF waterfall chains from margin through EBIT, NOPAT and FCFF to present value; the terminal block chains from reinvestment = $g / \text{return on capital}$; and the statements, ratios and all four lenses run off the same cells. A driver test perturbs every input in place and confirms the headline moves.

THREE CLASSES OF CELL ARE PASTED, and it is worth knowing exactly which.

1. Audited and disclosed history — the primary record, not a calculation. Where a line is both disclosed and derivable, the DISCLOSED figure is carried.
 2. The unit build's historical calibration: the Egyptian market size and SCEM's share of it, per year. Those two are research judgements, not arithmetic. Volume, realised price and revenue are all formulae from them, and everything downstream is formula.
 3. The Monte Carlo price map and the sensitivity grids. Each individual cell there is a COMPLETE re-run of the whole valuation, so it cannot be a formula in a grid. THESE GRIDS DO NOT REDRAW WHEN A DRIVER CHANGES — if you edit an input on Assumptions, the waterfall, statements and lenses all reprice, but the sensitivity tables and the price map keep the values printed here.
- Anything else pasted would be a defect.

HOW THE COMPANY IS VALUED, and why. SCEM is a single-asset cement operating company: essentially grey cement and clinker from two lines at El Hassana, and total debt of EGP 36.8mn against ~EGP 5.2bn equity makes it NET CASH. It is valued with one operating-company lens, not a sum of parts. The 25.4% stake in Sinai White Portland Cement — the only thing that could have been a second leg — was sold to Aalborg Portland (Cementir) for EUR 30mn, completed 13 August 2024.

TWO THINGS THE READER SHOULD KNOW BEFORE READING ANY NUMBER.

- * FY2024 is not a base year. Profit after tax of EGP 3,070mn on revenue of EGP 6,420mn is a 48% net margin that no cement plant earns from making cement; it contains the Sinai White disposal gain. Stripping it, underlying FY2024 profit was EGP 1,568mn, so FY2025 profit ROSE 46% — it did not fall 25%.
- * Profit after tax EXCEEDS EBITDA because a large cash pile earns Egyptian policy rates. That is an excess-cash artefact, not a second business. Treasury income is excluded from free cash flow entirely and the cash is added back in the enterprise-to-equity bridge.

PROVENANCE LIMIT, STATED PLAINLY. The company's audited statements could not be retrieved when built: the environment's egress policy refused every external host. Revenue and profit after tax are carried as disclosed via reporting of the EGX filing; every line between them is DERIVED by closing the

disclosed profit, and is labelled as derived on the Income Statement sheet.

No rating and no price target. Fair-value ranges and distributions only.

Summary valuation table

Sinai Cement Company S.A.E. · EGX: SCEM · EGP · 06-Aug-2026

	Value
Spot price (EGP)	100.50
Shares outstanding (mn)	260.81
Market capitalisation (EGP mn)	26,212
Net cash (EGP mn)	6,555
Enterprise value at spot (EGP mn)	19,657

VALUATION BY LENS

Lens	Role
DCF (cash flow)	PRIMARY — this IS the
Relative multiples	cross-check
Asset / replacement cost	cross-check
Book value (disclosed floor)	disclosed floor — nev
CENTRAL FAIR VALUE (EGP) — the primary lens, not a blend	
Envelope — the primary with the EBITDA margin across its own filed span (EGP)	
Vicat tender offer, July 2025 (EGP) — reference, not a value	41.00

COST OF CAPITAL AND TERMINAL

Cost of equity — explicit window	29.01%
WACC — explicit window	28.96%
WACC — terminal	17.38%
Terminal growth	7.0%
Terminal return on invested capital (replacement basis)	19.9%
Terminal value as % of enterprise value	68.2%

Terminal value share is linked live to the DCF sheet in both the lens table and the block above.

Value per share (E vs spot)			Terminal value % of EV		
122.67	22.1%	68.2%			
62.11	(38.2%)				
94.23	(6.2%)				
27.12	(73.0%)				
122.67	22.1%

Blended realised price (EGP/t)	3,372

COST STACK — EGP PER TONNE OF CEMENT

Materials, fuel, power and packing (note 24)	1,331
Transport, loading and export (notes 24 and 25)	286

TOTAL VARIABLE (EGP/t)	1,617
------------------------	--------------

PROFIT AND LOSS — EGP MILLION

Revenue	9,098
Variable cost	4,363
Fixed cost	1,271
EBITDA (AN OUTPUT)	3,464
EBITDA margin	38.1%
EBITDA per tonne (EGP)	1,284

VALIDATION — A TEST THAT CAN FAIL

Bottom-up FY2025 revenue	9,098
Disclosed FY2025 revenue	9,089
Difference	0.1%
Bottom-up FY2025 EBITDA	3,464
EBITDA implied by closing disclosed profit	3,455
Difference	0.3%

Nothing on this sheet is solved to force agreement. Every cost driver is an

independent physical or market norm, so a wrong cost stack shows up in rows 41 and 44. The model this replaces solved realised price as revenue divided by volume, which made its residual zero for ANY assumption — an identity, not a validation.

Less non-controlling interests	(120)
Implied value per share (EGP)	94.23

MEMO — BOOK, SHOWN BUT NOT USED AS A LENS

Book value per share (EGP)	27.12
Sustainable return on equity	28.3%

A book/return lens is deliberately NOT one of the four. The El Hassana plant commissioned in 1997 and is carried at historic cost through a five-fold devaluation, so book value measures the accounting rather than the asset. The cement sector's own yardstick — enterprise value per annual tonne of

capacity against replacement cost — is used in its place.

Earnings per share (EGP)	(0.88)

DERIVED LINES, stated plainly. Revenue and profit after tax are DISCLOSED (rows 5 & 14). EBITDA, D&A, EBIT and treasury income for the historical years are DERIVED by closing the profit: FY2024 anchors on the one disclosed EBITDA figure and solves treasury income & EBIT from disclosed profit after tax; FY2023 uses its own smaller cash balance. Row 13 is the tax charge, and row 15 sits beside row 14 so the reader can see the derivation closes to zero.

Sensitivity

PASTED — each cell is a complete revaluation. Does NOT redraw.

Explicit WACC (rows) × terminal growth (columns) — fair value per share (EGP)

	g = 3%	g = 4%
25.96%	105.27	109.31
27.46%	103.95	107.91
28.96%	102.66	106.54
30.46%	101.40	105.21
31.96%	100.17	103.91

NET CASH — the largest single uncertainty, now sensitised

	5,055	5,805
Fair value per share (EGP)	116.92	119.79

Revision 1 called net cash the assumption where "an error matters more than almost any operating assumption", and then published no grid on it. This is that grid.

Beta — fair value per share (EGP)

	β = 0.59	β = 0.60
Fair value	157.90	156.86

EBITDA margin shift — fair value per share (EGP)

	-4%	-2%
Fair value	109.26	115.96

Note the terminal-growth row: HIGHER growth gives a LOWER value. That is not an error. Terminal return on capital (9.4%) is below the terminal cost of capital (16.3%), so growth must be bought with reinvestment that earns less than it costs. This company creates value by harvesting, not by growing

(EGP)

g = 5%	g = 6%	g = 7%

Per-share and ratios

Every figure is a formula

	FY2023
Earnings per share (EGP)	(0.45)
Dividend per share (EGP)	
Book value per share (EGP)	(2.35)
Free cash flow per share (EGP)	
Net cash per share (EGP)	4.59
Return on equity	19.1%
EBITDA per tonne sold (EGP)	
Price / earnings (at spot)	-222.92x
EV / EBITDA (at spot)	88.22x

Price/earnings and EV/EBITDA are struck at the current spot against each year's earnings. The forecast columns show what the reader is paying today for a future year — not a forecast.

EGYPTIAN SECTOR STRUCTURE

Nameplate capacity (Mt/yr)	76.0
Domestic consumption 2025 (Mt)	54.0
Production 2025 (Mt)	65.0
Exports 2025 (Mt)	18.5
Dormant capacity under revival from 2H-2026 (Mt)	12.6
SCEM capacity as % of Egyptian capacity	5.0%
Revival capacity as % of domestic consumption	23.3%
Structural surplus (capacity less consumption, Mt)	22.0
SCEM EV/EBITDA at spot on FY2026E	4.46x

The structural surplus is the whole sector case in one number: Egypt can make far more cement than it consumes, and 12.6Mt of dormant capacity is under study for revival inside the forecast window.
