

## Elsewedy Electric Company S.A.E. (EGX: SWDY) — Bibliography and Source Register

Companion document to the valuation study dated 5 August 2026. It records where every number in that study came from.

### READ FIRST

This document exists so that a reader can check the study rather than trust it. It lists every input the valuation model uses, together with the value, the source, the date of that source, and the research layer it belongs to. Nothing in the study is computed from a figure that does not appear here.

Two things are worth knowing before reading the tables. First, inputs marked "House" are judgements or derivations made by the analyst, not disclosures by the company — each carries the reasoning that produced it, and the reader is free to disagree with it and re-run the model. Second, where a company disclosure could not be reached, that is recorded as a negative result at the end of this document rather than quietly filled in.

### The research layers

| Layer    | What it covers                                                                                                                                                         |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market   | Prices, volumes and market-observable data for the security itself                                                                                                     |
| Country  | Egyptian macroeconomic and sovereign data: policy rates, government bond yields, sovereign spreads, the exchange rate, the tax regime, the country equity risk premium |
| Industry | The wires and cables sector, engineering and construction, input costs and the competitive frame                                                                       |
| Company  | Elsewedy Electric's own audited and interim financial statements, earnings releases, exchange filings and disclosures                                                  |
| House    | Analyst judgement — forecast drivers, normalisation choices and cost-of-capital construction. Each is argued in place rather than asserted                             |

### Primary documents relied upon

| Document                                                                                                | Publisher                 | Date           | What was taken from it                                                                                                                                                                                                          |

Used with the FY2024 seasonal share to estimate the FY2025 volume base, which is not itself disclosed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| cables gp t fy25       | 88,173.0                                                                                                                                                                                                                                                                                                                                                         | 2025-05-26 | Cable gross profit per tonne, Q1-2025 as disclosed (against 93,672 in Q1-2024 on the restated basis). Taken as the FY2025 run-rate: it is the hard evidence for how far cable conversion margins actually compressed, and it is what pins the FY2025 unit build to reality rather than to an assumption                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ec backlog             | 323,700.0                                                                                                                                                                                                                                                                                                                                                        | 2026-03    | Engineering and construction order book: USD 6.5bn translated at the spot rate. Disclosed as 'approximately USD 6.5bn, above the group's typical historical range'. The reported turnkey backlog was EGP 165bn (Mar-2024), 239bn (Jun-2024) and 196bn (Dec-2024), so the current book is a genuine step up                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| seg rev fy25 disclosed | ec: 87,100.7;<br>transformers:<br>17,703.5;<br>meters:<br>16,594.1; infra:<br>3,857.9                                                                                                                                                                                                                                                                            | 2026-03    | FY2025 segment revenue on the restated five-segment taxonomy: engineering & construction 87,100.7, electrical products 17,703.5, digital solutions 16,594.1, infrastructure investment 3,857.9, with wires, cables & accessories 155,792.9 - summing to the reported 281,049. REPLACES the earlier assumption that the FY2024 mix carried forward, which an external audit correctly identified as the prior year's mix relabelled. TWO competing external claims were tested against each other: press coverage of the release reports E&C growth of +51%, which would put the segment at 105,764. That figure is REJECTED because it fails an independent coherence test - it leaves so little revenue for cables that the implied fabrication uplift |

| ownership          | family: 0.68;<br>electra: 0.2037;<br>float: 0.116 | 2026-08-06 | CORRECTED. The company's own shareholder pie chart carries 78.18% / 20.37% / 1.45% against the legend 'El Sewedy Family / Free Float / Electra Investment Holding'. Reading that in legend order gives a 20.37% free float — which is wrong. Electra Investment Holding (Abu Dhabi, IHC-linked) acquired ~427.7mn shares, about 20%, in a July-2024 mandatory tender offer at USD 1.05/share (~USD 449mn), confirmed by multiple independent reports of the exchange filing. The 20.37% slice is therefore ELECTRA, not the float. Independent sources put the family near 68%, leaving a free float of roughly 11.6% — about half what a legend-order reading implies. | tax eff           | 0.25                           | 2026-08-05 | Group effective tax rate used for NOPAT. Reported effective rates: FY2023 31.3%, FY2024 30.1%, FY2025 25.2% (derived, see P&L closure). The group pays tax in 15 countries; 25% is struck between the FY25 derived rate and the Egyptian statutory 22.5%, above the statutory rate because foreign profits are taxed in higher-rate jurisdictions and withholding leaks on repatriation                                                                                                                                                                                                        |
| gp fy25           | 40,720.0                       | 2026-03    | DERIVED: 9M-2025 gross profit ~EGP 30.0bn (15.0% of the 199.71bn 9M revenue, press coverage of the 9M filing) + Q4-2025 gross profit 10.77bn (Q4-2025 release: -0.7% y/y on Q4-2024's 10,841, 13.2% margin). Blends to a 14.5% FY margin                                                                                                                                                                                                                                                                                                                                                       |
| netfin fy25       | -3,400.0                       | 2026-08-05 | DERIVED FY2025 net finance cost. The Q1-2025 net run-rate annualises to -3,023 and FY2024 printed -3,515 on a smaller debt book; -3,400 is struck between them, allowing for a larger balance sheet against a falling policy rate. This is the one materially estimated line in the FY2025 income statement and it is what the implied tax rate is most sensitive to                                                                                                                                                                                                                           |
| fx path           | 51, 54, 57.5, 61, 64.5         | 2026-08-05 | USD/EGP average-rate path, about 6%/yr of depreciation from the FY2025 average of 49.5. This is a genuine driver in the bottom-up build, not a translation convenience: copper is priced in dollars, so it sets the Egyptian-pound price per tonne of cable and rod directly. DELIBERATELY BELOW covered-interest parity, which on the 22.31% pound against a ~4.3% dollar rate implies about 17%/yr — the base case assumes disinflation closes most of that gap rather than the currency absorbing it. The parity case is carried as an explicit sensitivity                                 |
| cables vol growth | 0.06, 0.05, 0.04, 0.04, 0.04   | 2026-08-05 | Cable tonnage growth. The FY2025 base is a 7.7% volume DECLINE on FY2024 (disclosed Q1-2025 -7.8%), so the forecast is a recovery to roughly the FY2024 level by FY2028 and modest growth thereafter, supported by regional grid build-out, data-centre demand and the export book. No capacity step-change is assumed                                                                                                                                                                                                                                                                         |
| cables uplift     | 1.3, 1.3, 1.3, 1.3, 1.3        | 2026-08-05 | Fabrication uplift: cable price per tonne divided by the copper cost per tonne. History back-solves to 1.386 (FY2023) and 1.261 (FY2024); the forecast is held at 1.30, between the two. This is the term that converts a copper price into a cable price, and holding it flat means no pricing-power assumption is being smuggled in                                                                                                                                                                                                                                                          |
| cables conv       | 0.15, 0.16, 0.17, 0.175, 0.175 | 2026-08-05 | Cable conversion margin — gross profit as a share of the realised price per tonne — for the forecast years. History back-solves to 25.0% (FY2023), 22.8% (FY2024) and roughly 13.8% (FY2025, from the disclosed gross profit per tonne against the back-solved price per tonne). The forecast recovers only part of that collapse and never approaches the FY2023-24 levels, which carried devaluation gains on cheaply bought copper inventory                                                                                                                                                |
| unit gp growth    | 0.085, 0.08, 0.075, 0.07, 0.07 | 2026-08-05 | Growth in gross profit PER UNIT for the manufacturing lines — per tonne of cable and rod, per MVA of transformer, per meter. This is the correct structure for a converter: when copper spikes, revenue rises because the metal is passed through, but the conversion margin earned on each tonne does not, so the percentage margin falls. Modelling these as a percentage of a copper-inflated price would manufacture profit out of a commodity move. The path is set at roughly Egyptian cost inflation, i.e. a flat real conversion margin with no recovery in unit profitability assumed |
| margin recovery   | 1, 1.04, 1.07, 1.09, 1.1       | 2026-08-05 | Recovery factor applied to the FY2025 gross margins of the non-cable lines. FY2025 margins are calibrated to the disclosed group gross profit, which implies roughly a 10% compression against FY2024 across those lines; the forecast recovers about half of it by FY2030 and no more                                                                                                                                                                                                                                                                                                         |
| rawmat vol growth | 0.04, 0.04, 0.03, 0.03, 0.03   | 2026-08-05 | Raw-material (copper rod) tonnage growth. This arm is close to a pure pass-through: implied volume was 99kt in FY2023 and 120kt in FY2024                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| rawmat uplift     | 1.02                           | 2026-08-05 | Raw-material price per tonne as a multiple of the copper cost — a thin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                         |                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------|----------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                         |                                  |            | conversion spread over the metal                                                                                                                                                                                                                                                                                                                                                                                   |
| rawmat gp               | 0.135                            | 2026-08-05 | Raw-material gross margin. History 13.4% (FY2023), 15.4% (FY2024); the forecast is struck at the lower end                                                                                                                                                                                                                                                                                                         |
| ec burn                 | 0.27, 0.265, 0.26, 0.255, 0.25   | 2026-08-05 | Share of the opening order book converted to revenue each year. The FY2025 revenue of roughly EGP 88bn against a book of EGP 324bn implies about 27%, i.e. a three-and-a-half-year book. The rate is tapered as the book lengthens                                                                                                                                                                                 |
| ec book to bill         | 1.05, 1.05, 1.03, 1.02, 1        | 2026-08-05 | New awards as a multiple of revenue recognised. Above one early, reflecting the disclosed step up in the order book, converging to replacement                                                                                                                                                                                                                                                                     |

Set below Egyptian headline inflation on the disinflation path                                                                                                                                                                                                                                                                                  |
| other growth            | 0.12, 0.11, 0.1, 0.09, 0.08      | 2026-08-05 | Revenue growth for the two smallest lines — other electrical products, and infrastructure investment (industrial development, logistics, utilities, dry port and independent power projects). Together under 3% of revenue                                                                                                                                                                                         |
| other gp                | elecprod: 0.45; infra: 0.6       | 2026-08-05 | Gross margins on the two residual lines. History: other electrical products 53.9% (FY2023) and 50.7% (FY2024); infrastructure 50.7% and 61.8%. Struck conservatively                                                                                                                                                                                                                                               |
| opex pct                | 0.04, 0.043, 0.046, 0.048, 0.05  | 2026-08-05 | The net operating load between gross profit and EBITDA, as a share of revenue — selling, general and administrative costs and other expenses, less other income. History: 5.94% (FY2023) and 5.30% (FY2024). FY2025 solves to a much lower level, so the forecast glides back TOWARD the historical norm rather than assuming the FY2025 load persists. This is the single most conservative choice in the rebuild |
| nwc pct                 | 0.23                             | 2026-08-05 | Net working capital as a share of revenue, held flat at the historical level. Computed from the audited balance sheets: FY2023 24.1% and FY2024 23.1% (inventories + contract assets + receivables less payables less contract liabilities). This is the single largest cash-flow driver in the model                                                                                                              |
| capex pct               | 0.03, 0.029, 0.028, 0.026, 0.024 | 2026-08-05 | Capex as a share of revenue, tapering. History: FY2023 3.2%, FY2024 3.8% (a capacity burst — property, plant and equipment rose 53% in one year), Q1-2025 4.7% annualised. The taper assumes the current expansion cycle completes and spending settles toward maintenance plus modest capacity addition                                                                                                           |
| dna pct                 | 0.0105                           | 2026-08-05 | Depreciation and amortisation as a share of revenue. History: FY2024 0.97%, Q1-2025 1.15%; set at 1.05% rising with the enlarged asset base                                                                                                                                                                                                                                                                        |
| erp ops weighted        | 0.0737                           | 2026-08-05 | Operations-weighted equity risk premium: 30% Egypt at 9.41% and 70% rest-of-world at a 6.5% blended emerging/frontier premium, reflecting where the revenue is actually earned. Shown as an explicit alternative, not the primary, because the standing house rule takes the country premium of the listing and reporting currency                                                                                 |
| beta                    | 1.009                            | 2026-08-05 | Own-stock tier-1 regression: SWDY weekly log-returns against a 31-name equal-weight EGX composite built from the full covered library, 5-year window. R-squared 0.291, n = 258, standard error 0.098, 90% confidence interval [0.85, 1.17]. Comfortably clears the usability gate and is NOT weak-instrument flagged (R-squared well above 10%, interval span 0.32 against a 1.009 point estimate)                 |
| kd                      | 0.13                             | 2026-08-05 | Marginal cost of debt, CURRENCY-BLENDED. The audited FY2024 interest-rate note discloses average rates on financial liabilities of 28.68% in Egyptian pounds, 6.49% in US dollars and 3.92% in euros, and Note 32 confirms 28.6% / 6.45% / 7.45%. The blended rate the company actually pays is far below                                                                                                          |

|                |                                                                |            |                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------|----------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                |                                                                |            | the Egyptian rate because a majority of the book is hard currency. Set at 13.0% against the independently computed effective rates below, allowing for the CBE's easing since the FY2024 note                                                                                                                                                                                                         |
| kd path        | 0.13, 0.122, 0.115, 0.11, 0.106                                | 2026-08-05 | Forward cost-of-debt path FY26E-FY30E on the blended book. The Egyptian leg follows the CBE easing cycle (main operation rate 19.50%, held since April 2026 after three consecutive pauses) toward the 7% (2026) and 5% (2028) inflation targets; the hard-currency leg is broadly flat. The discount-rate glide takes its shape from this path by construction rather than being invented separately |

| rf term        | 0.105                                                          | 2026-08-05 | Terminal risk-free rate, norm-built: the CBE's own stated medium-term inflation target of 5% plus the standard ~5.5pp emerging-market real-rate convention. Never a raw historical average and never reverse-engineered from a price                                                                                                                                                                  |
| erp term       | 0.07                                                           | 2026-08-05 | Terminal equity risk premium, normalised below the currently elevated crisis-era level toward the rating-class norm; never held flat into perpetuity                                                                                                                                                                                                                                                  |
| wd term        | 0.25                                                           | 2026-08-05 | Terminal debt weight D/(D+E), NORMALISED rather than today's weights. The company runs a gross debt book sized to fund working capital but carries very large offsetting cash, so its net leverage is light; 25% is the steady-state structure for a diversified industrial of this scale                                                                                                             |
| g term         | 0.05                                                           | 2026-08-05 | Terminal growth, 5% — the standing centre for established names in this market post-disinflation, sensitised 3-7%. Note this is an EGP-NOMINAL rate struck against a terminal risk-free rate that itself embeds 5% inflation, so the base case assumes approximately zero real terminal growth: a deliberate conservatism for a company whose revenue is majority hard-currency                       |
| ev ebitda just | 6.5                                                            | 2026-08-05 | Justified EV/EBITDA on mid-cycle FY27E EBITDA. The company's own trailing multiple is ~7.9x; listed cable and electrical-equipment peers trade 8-11x and Riyadh Cables ~14x on earnings. 6.5x applies an Egyptian-market discount for sovereign, currency-convertibility and disclosure risk. Bear 5.5x / bull 8.0x                                                                                   |
| pe just        | 9                                                              | 2026-08-05 | Justified through-cycle P/E on normalised earnings. Trailing is ~13.0x. 9.0x reflects a high-quality franchise held back by an Egyptian cost of equity near 28%. Bear 7.0x / bull 11.5x                                                                                                                                                                                                               |
| roe sust       | 0.235                                                          | 2026-08-05 | Sustainable return on equity for the book lens. Trailing ROE is ~27.5% on average parent equity; the FY2023-24 prints were flattered by devaluation inventory gains, so the sustainable rate is struck below them                                                                                                                                                                                     |
| lens weights   | dcf: 0.45;<br>relative: 0.2;<br>normalized:<br>0.2; book: 0.15 | 2026-08-05 | DCF primary for an operating manufacturer with a long, contracted order book; the relative and normalised-earnings lenses carry equal secondary weight and the book lens least, because reported book value is distorted by three years of currency translation                                                                                                                                       |

## The judgements, stated separately

These are the places where the analyst chose rather than observed. They are collected here so a reader can find them without reading the whole study.

| Judgement                                   | What was chosen                                                                                                                                                   | Why                                                                                                                                                      | What would overturn it                                                                                                     |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Currency of discounting                     | The full Egyptian cost of capital is charged to the whole company as the primary reading; the hard-currency alternative is computed and shown but not averaged in | The shares trade, and dividends are paid, in Egyptian pounds on an Egyptian exchange, and realising value depends on Egyptian capital-account conditions | Evidence that convertibility is not a binding constraint for this issuer would shift the primary reading materially higher |
| Exchange-rate path                          | About 6% a year of depreciation, far below what the interest-rate differential implies                                                                            | The base case assumes the central bank's disinflation path closes most of the gap rather than the currency absorbing it                                  | A disorderly move in the pound; the sensitivity table carries the parity case                                              |
| Working capital held flat at the historical | Net working capital stays near the level the two audited years                                                                                                    | Two audited years show it rising with revenue rather than converting                                                                                     | Two consecutive halves of operating cash flow above 60%                                                                    |

|                                                           |                                                                           |                                                                                                                                                                    |                                                                                                        |
|-----------------------------------------------------------|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| share of revenue                                          | show                                                                      |                                                                                                                                                                    | of EBITDA                                                                                              |
| Terminal growth of 5%                                     | The standing centre for established names in this market, sensitised 3–7% | It is below the blended long-run nominal growth ceiling of the economies the company operates in, and is reconciled to the return on capital and reinvestment rate | A demonstrated structural change in the export franchise's long-run growth                             |
| Cost of debt at the blended rather than the domestic rate | A currency-blended rate near the independently computed effective rate    | The audited notes disclose materially cheaper hard-currency borrowing, and most of the book is hard currency                                                       | A shift of the debt book back into Egyptian pounds                                                     |
| Minority interests charged at their share of group profit | Rather than at book value                                                 | Minorities take a larger share of profit than of book equity, so the profit share is the conservative charge                                                       | A reader preferring the book convention can add the difference back; the amount is stated in the study |
| Effective tax rate of 25% for NOPAT                       | Above the Egyptian statutory rate                                         | Reported effective rates ran above statutory in every historical year because foreign profits are taxed elsewhere                                                  | The audited FY2025 tax note                                                                            |
| FY2025 income statement closed to reported profit         | EBITDA set at the disclosed margin; the tax rate closes the account       | Only the top and bottom lines were disclosed for FY2025                                                                                                            | The audited FY2025 consolidated statements                                                             |

## Negative results — what could not be sourced

Recorded because an unsourced gap that is not disclosed becomes an invisible assumption.

| What was sought                                                         | Outcome                                                                                                                                                                                                                                        | How the study handled it                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Audited consolidated financial statements for FY2025                    | Not reachable. The company's investor-relations site and the exchange's filing archive were both unreachable from the research environment; the company's document repository was reachable but its contents stop at the first quarter of 2025 | FY2025 was built from the disclosed headline figures reported by financial press covering the exchange filing, cross-checked against each other and against the quarterly path. Every derived line is labelled in the study and in the register above |
| The Q4 2025 and Q1 2026 earnings releases in full                       | Located but not retrievable; the hosting domains were unreachable                                                                                                                                                                              | Headline figures were taken from press coverage of the filings. Segment detail for FY2025 and Q1 2026 does not exist in the study as a result — segment shares are apportioned from company commentary and the last fully disclosed segment table     |
| FY2025 balance sheet beyond total assets and net bank debt              | Not disclosed in any reachable source                                                                                                                                                                                                          | Triangulated by three independent methods; the spread is shown in the study and only the disclosed net debt enters the valuation bridge                                                                                                               |
| A facility-by-facility currency split of the debt book                  | Not disclosed at that granularity                                                                                                                                                                                                              | The split was inferred from the disclosed average rates by currency and the independently computed blended effective rate, and is labelled as inferred                                                                                                |
| An explanation for the sharp single-session price move on 4 August 2026 | No corresponding company disclosure or news item was found                                                                                                                                                                                     | Not used. The study's anchor is the closing price on 5 August 2026 and no narrative is attached to the move                                                                                                                                           |

## A note on aggregator data

Aggregator and data-vendor figures were used only where a company source was unavailable, and they were checked against the company's own disclosures wherever both existed. One material discrepancy was found and is recorded here: a widely syndicated "FY2025" balance sheet — total assets, total equity, total debt and cash — reproduces the company's audited 31 December 2024 figures exactly, one year stale. It was discarded. The FY2025 balance-sheet figures used in this study are the disclosed total assets and net bank debt, plus the triangulation described above.

## **Disclosure**

This document accompanies an educational valuation study. It is not investment advice and contains no recommendation, rating or price target. Sources are listed so that readers can verify the analysis independently. Where a figure is derived or estimated rather than disclosed, that is stated.
