

Emirates Central Cooling Systems Corporation PJSC (DFM: EMPOWER)

Companion document to the valuation study dated 9 August 2026 and revised 17 August 2026 following an external audit — the findings, dispositions and prices are catalogued in the accompanying critique-response note, and the register below reflects the revised inputs and constructions. It exists so a reader can check the study rather than trust it: every input the model uses is listed with its value, its source and construction, the date the source itself bears (not the date it was read), and the research layer it belongs to. The judgements — the places where the analyst chose rather than observed — are collected separately, each with the evidence that would overturn it. Searches that returned nothing are recorded, because an absence of disclosure shaped the model as much as the disclosures did.

Layer	What it covers
Market	Prices, volumes and market-observable data for the security itself
Company	Empower's own audited and reviewed financial statements, earnings presentations and exchange disclosures
Country	UAE macroeconomic and sovereign data: the policy rate, the dirham sovereign curve, default spreads, the equity risk premium, the tax regime
House	Analyst judgement — forecast drivers, normalisation choices and cost-of-capital construction, each argued in place rather than asserted

1 Primary documents — the company filings this study is built from

All eight documents below were retrieved from the company's own website (empower.ae) on 9 August 2026 and read in full. The investor-relations HTML pages refuse non-browser clients, but the filing archive itself is open; two filings are page scans and were read by optical character recognition, with every extracted statement line cross-footed against the statement totals before use.

Document	Date	Location (empower.ae)	What was taken from it
Audited consolidated financial statements FY2022 (PwC, unqualified) — the listing year, with FY2021 comparatives	14-Feb-2023	/media/0itbxotb/empower_en_fs_2022.pdf	FY2022 and FY2021 income statement, balance sheet and cash flow — the two earliest of the five audited years in the margin history; the listing-date share structure (10,000mn shares at AED 0.10 par)
Audited consolidated financial statements FY2023 (PwC, unqualified)	14-Feb-2024	/media/vn1fsmte/2023_financial_statements_e.pdf	Full FY2023 statements: revenue, cost of sales, operating profit, the tax CREDIT from first recognition of deferred tax assets; the airport-cooling concession acquisition — 85% of DXB CoolCo with the seller (Dubai Aviation City) retaining the 15% minority recognised at AED 157.5m, accounted for as a service concession under IFRIC 12 with a financial-asset receivable of AED 1,050.0m recovered over the concession, stated as "a term of 35 years from the commencement date (5 July 2023)" — and the borrowing step-up that funded it; consumption revenue in the auditor's key-audit-matter section
Audited consolidated financial statements FY2024 (PwC, unqualified)	14-Feb-2025	/media/0nspfjnz/empower_fs_2024_e_14-02-2025.pdf	Full FY2024 statements and notes: electricity and water purchased from DEWA (related-party note); the 2024 refinancing; the 2024 borrowing-cost capitalisation rate; lease, grant and payables notes; consumption revenue in the key-audit-matter section
Audited consolidated financial statements FY2025 (PwC, unqualified)	09-Feb-2026	/media/lgbpvouk/empower_fs_2025_e_09-02-2026.pdf	The anchor year, read by optical character recognition (page scan): every FY2025 income-statement, balance-sheet and cash-flow line in the study; the full 2025 refinancing of both revolving facilities at a reduced margin; the 4.92% borrowing-cost capitalisation rate; the 9.0% effective tax rate; dividends paid; consumption revenue in the key-audit-matter section
Condensed interim financial statements, three months to 31-Mar-2026 (limited review)	06-May-2026	/media/ld0h1d2a/empower_fs_q1_e_06_05_2026.pdf	The pre-shock study-year quarter (read by optical character recognition, cross-footed): Q1-2026 revenue, profit and comparatives
Condensed interim financial statements, six months to 30-Jun-2026 (limited review)	05-Aug-2026	/media/emibya3p/empower_fs_q2_e_05_08_2026.pdf	The shock quarter: Q2-2026 standalone and H1-2026 figures; the 30-Jun-2026 balance sheet the valuation bridge is struck on; the note tying the consumption fall partly to conflict impact on hospitality occupancy; the half-year cash-flow statement including the April dividend instalment
H1-2026 earnings presentation (24 pages)	05-Aug-2026	/media/z1djkwz3/earnings-presentation-h1-2026.pdf	Connected capacity (1,707k RT) and contracted capacity (2,018k RT); the 100-110k RT 2026 connection guidance; equivalent full-load hours; quarterly EBITDA margins; net debt as the company presents it; the AED 875m dividend commitment for 2025 and 2026; the demand/consumption/others revenue mix — the ONLY source for that mix, flagged wherever it is used
Investor-relations filing archive (index page)	09-Aug-2026	/investor-relations/financial/financial-statements/	The document index itself; the main investor-relations landing page refuses non-browser clients and that refusal is recorded rather than worked around

2 The full input register — every figure in the model

Values are shown as the model holds them: AED millions for financial-statement lines (thousands of refrigeration tons for capacity), decimals for rates and ratios. The layer is the research layer defined on the first page. Where a value is a construction rather than a quotation, the construction is stated in the source column itself.

Input	Value	Layer	Date	Source and construction
spot	1.57	Market	2026-09-03	DFM close for EMPOWER, 3 September 2026, from the price file the principal supplied that day and committed to the repository. THE STUDY IS RE-STRUCK ON IT because no study is delivered against a stale price: the prior edition stood on the 7-August close of 1.50, and the stock has since risen 4.7%
shares mn	10,000.0	Company	2026-02-09	Share capital note 16: AED 1,000,000k at AED 0.10 par = 10,000,000,000 shares, unchanged since the Nov-2022 IPO (EPS note 35 cross-check: 896,754k / 0.090 = 9,964mn wtd)
tax ct	0.09	Company	2026-02-09	UAE federal corporate tax 9% (FY2025 audited effective rate exactly 9.0%: 99,226k tax on 1,103,161k PBT; note 28)

beta	0.863	Company	2026-08-10	Own-stock weekly regression vs the FTSE ADX General Index — the UAE base market index PER EXPLICIT INSTRUCTION 10-Aug-2026, replacing the listing exchange's own DFM General Index (that regression, beta 0.652, is retained as the archived comparison regression — priced as a full parallel valuation since the 17-Aug revision). User-supplied FADGI history 2011-2026; regression window 25-Nov-2022..24-Jul-2026 (3.66y, clipped at the index file's endpoint two weeks before the anchor): beta 0.863, R2 0.103, n 189, SE 0.186, CI90 [0.56, 1.17] — meets the study's minimum statistical-usability standard
kd marg	0.0492	Company	2026-02-09	Cost-of-debt anchor = the company's own disclosed all-in borrowing cost (the accounting capitalisation rate on general borrowings, note 30 — an average, not a marginal print), struck after the 2025 refinancing into two AED 2.75bn revolving tranches at EIBOR + a REDUCED margin; per the H1-2026 borrowings note only ONE tranche has been extended (to Feb-2028) — the other still matures Sep-2027, a dated roll risk stated in the study; sits above the 4.48% AED sovereign as a

				same-currency corporate must (2024 comparison: 5.993%; 3M EIBOR ~3.9% in Aug-2026, 3.66% at end-March, + implied margin ~0.9-1.3%)
asset life years	28.0984	Company	2026-02-09	Audited consolidated financial statements for the year ended 31 December 2025, signed 9 February 2026, obtained from the company's own investor-relations page, notes 5, 6 and 7, DERIVED BY IDENTITY from those notes' own cost and charge columns and LABELLED as derived, and READ BY OCR OFF THE RENDERED PIXELS because the filing carries no usable text layer (85 bytes across 85 pages) and its property note is printed landscape, so the page was rotated before it could be read. ARITHMETIC IS THE ARBITER AND THE EXTRACTION FOOTS FOUR WAYS: the cost columns sum to the printed total of 10,929,327; the accumulated-depreciation columns to 3,734,337; cost less accumulated reproduces the balance sheet's 7,194,990; and the year's charge of 352,199 splits to the 341,696 in cost of sales and 10,503 in general and administrative expenses the notes state separately. Property, plant and equipment 10,001,105 (total less land, which is never depreciated, and less capital work in progress, whose accumulated column is impairment rather than depreciation) over 352,199 gives 28.40 years; right-of-use 22,649 over 5,361 gives 4.22; intangibles are DISCLOSED at 30 years outright and their gross cost follows from the flat charge. Blended, 28.10 years, cross-checked at 27.88 on FY2024's own columns. The right-of-use figure does NOT match the 15-year equipment lease the note names, and the note explains why rather than contradicting it: the book is 19,997 of buildings against 2,652 of equipment, and the buildings are a head office and labour accommodation on ONE-YEAR terms
accum dep fy25	3,737.1	Company	2026-02-09	Audited consolidated financial statements for the year ended 31 December 2025, signed 9 February 2026, obtained from the company's own investor-relations page, notes 5 and 6: accumulated depreciation at 31-Dec-2025 across the depreciable classes, less the capital-work-in-progress column which is impairment rather than depreciation. AED mn
dep charge fy25	369.7	Company	2026-02-09	Audited consolidated financial statements for the year ended 31 December 2025, signed 9 February 2026, obtained from the company's own investor-relations page, notes 5, 6 and 7: the year's own depreciation and amortisation charge on those classes. AED mn

g1 real	0.0049	House	2026-08-09	Stage-one REAL growth, and it is the RESIDUE of a volume assumption rather than a rate anybody set: this company's tariff is REGULATED AND NOT INDEXED, so nominal revenue growth IS volume growth. The previous edition typed 2.5% nominal as the Dubai build-out rate (connected 1.7m of ~2.0m RT contracted), and on the house terminal inflation of 2.0% that is +0.49% real. STORING IT THIS WAY MOVES NO NUMBER HERE, which is the point worth recording: on a frozen-tariff business a typed nominal rate carries a meaning it does not carry elsewhere, and the storage rule makes that visible instead of leaving a reader to compute it
g2 real	-0.0049	House	2026-08-09	Stage-two REAL growth, and it is NEGATIVE — written down as the real number it is rather than left inside a nominal 1.5%. The previous edition set stage two at 1.5% nominal for 'long-run densification with about zero real tariff growth', and against 2.0% inflation that is a real DECLINE of 0.49% a year

				for ever. Under a tariff the regulator does not index, a business whose volume grows more slowly than prices shrinks in real terms by construction, and this rate says so
g term derived	0.025	House	2026-09-03	Terminal growth, two-stage and now DERIVED from real rates rather than typed: 2.5% nominal for a ten-year second stage, which under the regulator's no-indexation rule is a VOLUME-ONLY figure (Dubai 2040 build-out, the contracted backlog and the 163-186 new-contracts/yr signing run-rate) and is +0.49% in real terms on the house long-run inflation of 2.0%; then a 1.5% perpetuity, which is -0.49% real — a real DECLINE, stated as one, for long-run densification with no real tariff growth. The published grid extends to 0% so the flat-everything end is visible. The former "long-run UAE nominal-GDP-consistent" label was wrong in the conservative direction (UAE nominal GDP CAGR 2024-29 about 5.7%) and is withdrawn
g term2 derived	0.015	House	2026-09-03	DERIVED: the same identity on the stage-two real rate, reproducing the previous edition's typed 1.50%%. A real DECLINE, stated as one.

3 The judgements, stated separately — and what would overturn each

These are the places where the analyst chose rather than observed. Each carries its reasoning and the observable evidence that would overturn it; a reader is free to disagree and re-run the model, which is built so that changing any of these reprices everything downstream.

Judgement	What was chosen	Why	What would overturn it
The consumption recovery (the crux) — DUAL-FRAMED since the 17-Aug revision	Usage per connected ton carries a 6% shock in 2026. The recovery (de-escalation) case restores the 2025 level through 2027; the continuation case — the world as it stood on the published facts at the anchor — is a full parallel model (2.074 against 2.134 per share on the primary lens; weighted centrals 1.82/1.85 at 9% tax). NEITHER is privileged as the base: the external audit established that the de-escalation the recovery case requires had not occurred at the anchor date, so the two are published side by side like the tax framings	The interim notes tie the usage fall mainly to lower hospitality activity (the company's own attribution; weather minor); capacity connections kept growing through the same half, so the loss reads as demand-cyclical, not structural — but the macro condition for recovery is a fact about the war, not the company, and is not asserted	De-escalation implemented (strait reopened, attack tempo fading) promotes the recovery case; two consecutive half-years with equivalent full-load hours below the 2026 trough retire it
The tax framing (dual-framed throughout)	The audited 9% effective rate is the base; the 15% domestic minimum top-up rate is computed as a full second column (1.976 against 2.134) — published side by side, never averaged	Whether consolidation into the DEWA group (revenue far above the EUR 750m threshold) sweeps a listed 80%-held subsidiary into the minimum-tax regime is genuinely unresolved in the guidance read for this study	A Ministry of Finance clarification or the tax note of the FY2026 filing — either way, the corresponding published column simply takes over
Terminal growth — RELABELLED and RESTRUCTURED in the 17-Aug revision	Two-stage: 2.5% VOLUME-ONLY for ten further years, then a 1.5% perpetuity; the published grid extends to 0.0%	The regulator's tariff instrument bars indexation of capacity charges, so any perpetual growth must be volume; the ten-year stage rests on the Dubai 2040 build-out, the contracted backlog and the disclosed signing run-rate, and the former "nominal-GDP-consistent" label is withdrawn (it understated nominal GDP growth — an error in the conservative direction). The tension is stated: 2.5% volume growth forever would double the connected base every ~28 years, which is why the perpetuity steps down	A new-emirate or acquisition-led expansion commitment (raises the bound), a tariff regime with escalation (impossible under the current instrument without a rule change), or connections stalling below the signing run-rate (lowers it)
The valuation clock (stub convention) — ADOPTED in the 17-Aug revision	Bridge and cash-flow clock BOTH at 30-Jun-2026: 2026 contributes its second half only, discounted at half a year; later year-ends at 1.5-4.5 years; terminal at 4.5	The prior convention discounted the full 2026 year against the June balance sheet and so double-counted roughly AED 200m of first-half cash — the audit's finding, confirmed and repriced	Nothing — this is now the dating convention, stated so the reader can reproduce the discounting
The related-party acquisition receivables — CLEAN treatment since the 17-Aug revision	Interest income excluded from operating EBITDA and free cash flow; the asset (AED 1,294.4m at 30-Jun-2026: Dubai Aviation City 1,005.0 + Nakheel 289.4) added at BOOK in the bridge; excluded from terminal invested capital. Rental income on the investment properties treated identically (excluded from operating earnings; the properties sit in the bridge at book)	A financial asset's return cannot be capitalised as an operating perpetuity while the asset is also added — that prices it twice. The first edition's treatment was incoherent in exactly that way (audit finding, conceded); rental income was the same defect found by the re-check against the other-income note	A disclosed impairment, restructuring or prepayment of either receivable — the book-value leg would then be re-marked
The cost-of-capital construction — DUAL-FRAMED since the 17-Aug revision	Base: target net-debt weights at 7.64%. Priced alternatives, each a full parallel valuation: gross-debt weights (7.26%, 2.287/share), net debt at its negative carry (7.81%, 2.069), and the listing-exchange (DFM) index beta (6.78%, 2.515)	The audit's largest contested findings were constructions of the discount rate pulling in opposite directions; arbitration on coherence and company policy (net-debt target ~2x EBITDA, payout ≈ free cash flow to equity, so surplus cash is transient) keeps the target-net base — and	The company running a durable structural cash pile (promotes the carry construction) or de-rating its net-debt policy (promotes gross weights)

		every alternative is priced instead of argued away	
Capital expenditure per new refrigeration ton	AED 4,889 per RT added (derived: 2025 cash capital expenditure over the year's added tons), plus a 0.8% maintenance allowance on net plant	No AED capital-expenditure guidance is disclosed anywhere (a recorded negative search); cost-per-ton on the audited cash figure is the finest sourced level available	Company capital-expenditure guidance, or two years of cash figures diverging materially from the per-ton construction
Electricity-and-water pass-through ratio	Purchased electricity and water held at 76.3% of consumption revenue (the audited 2025 print; 2024 was 72.5%)	The cost is tied to its own physical driver — the consumption leg — on the related-party purchase disclosure, never to a blended inflation index; the DEWA slab tariff is flat and the fuel surcharge floats monthly	A DEWA tariff revision, or the ratio moving by more than two points in a full-year print
Working capital	Net working capital held at -51.4% of revenue (negative — customer deposits and payables fund the cycle), from the audited 2025 balance sheet with capital-expenditure accruals stripped out	The ratio is structural: deposits are contractual and the dominant payable is to the related-party supplier	Receivable days lengthening materially (the collection cycle stood near a month at FY2025) or a change in deposit terms
The connected-capacity path	The 2026 guidance midpoint, then additions funded by the contracted backlog, tapering as the build-out matures	The company's own guidance and its signed but not-yet-connected backlog are the finest sourced volume drivers available; no market-growth assumption is used	Connections printing outside the guidance band, or the contracted backlog shrinking two decks running
The cost of equity construction	Risk-free = the most recent dirham sovereign print less the UAE's own default spread; beta 0.863 from the stock's own weekly history against the FTSE ADX General Index (adopted as the UAE market index by explicit instruction; the DFM-index regression, 0.652, is priced as a full parallel valuation since the 17-Aug revision); the published UAE equity risk premium; both spread bases computed (they converge: 8.24% against 8.28%)	Country risk must enter once — through the premium — not twice; the two published bases are both carried precisely because the choice between them is contested, and here it turns out to cost nothing. The beta-index choice, by contrast, is worth a fifth of the primary lens and is therefore priced, not footnoted	A longer LIQUID dirham sovereign print post-repricing (the stale Feb-2033 tap does not qualify and is named as such) or the beta interval shifting as the listing history lengthens
Minority interests at their profit share	Minorities are charged 1.1% of equity value — their share of profits — rather than book value	The study values the group above book, so valuing the minority claim at book while valuing everyone else's above it would apply two standards to the same subsidiaries	A disclosed transaction in the minority stakes establishing a different value
The tax framing keeps the interest shield in BOTH columns	Both framings discount at 7.64%: the 15% minimum top-up is a minimum-effective-rate charge, not a higher statutory rate, so the 9% interest shield survives in the 15% column	Pillar-Two mechanics: the top-up restores the effective rate to the minimum; it does not change the statutory deductibility of interest — the audit's point, accepted and implemented	UAE implementing rules explicitly recomputing the debt shield at the top-up rate for in-scope entities

4 Searches that returned nothing — recorded, not filled in

Each of these absences shaped the model. They are recorded with the scope of what was searched, so a reader knows the difference between "not disclosed" and "not found".

What was looked for	Where	Consequence for the model
A per-ton tariff schedule — the AED level of the capacity (demand) charge	The revenue notes of all four audited filings; the interim notes; the investor-relations presentations; a site-restricted web search of empower.ae. Only consumption revenue (in the auditor's key-audit-matter sections) and a first-half percentage mix (in the H1-2026 deck) are disclosed	The capacity rate per connected ton is IMPLIED — solved from disclosed total revenue less disclosed consumption and pipes revenue — and flagged as implied wherever it appears; its growth is tied to connected tons at a flat regulated tariff
AED capital-expenditure guidance	All filings and both 2026 investor presentations: the deck carries refrigeration-ton guidance but no dirham capital budget	Capital expenditure is modelled as cost per new ton derived from the audited 2025 cash figures plus a maintenance allowance — a construction, flagged as such in the judgements table above
The contractual margin over EIBOR on the two revolving credit facilities	The borrowings notes of the FY2024 and FY2025 filings say only "EIBOR plus a margin", and for 2025 "a reduction in interest margin"; the basis-point margin is nowhere disclosed	The marginal cost of debt is anchored instead on the closest disclosed all-in figure — the company's own borrowing-cost capitalisation rate (4.92% in 2025, 5.993% in 2024) — checked above the dirham sovereign yield

5 Aggregator and press data — discrepancies found and how they were handled

Item	What was found	Handling
Market index series for the beta regression	The FTSE ADX General Index history used (supplied export) ends at 24-Jul-2026, two weeks before the anchor date, so the regression window clips there. The previously used DFM General Index series (an aggregator pull, ~a fifth of sessions missing, ending 16-Jul-2026) is retained only as the archived comparison regression (beta 0.652 against 0.863 adopted)	Used for ONE purpose only: the market side of the beta regression, where the weekly sampling (last observation of each week) absorbs the missing sessions; the sparsity and the stale endpoint are flagged in the study. Never used for Empower's own prices, which come from the supplied exchange history through 07-Aug-2026
Conflict and ceasefire status, August 2026 — RESOLVED in the 17-Aug revision	The first edition treated the truce status as an unresolved disagreement between sources and leaned on the stale reading ("holding since 8 April"). The dated timeline record, externally re-verified for the revision, is unambiguous: the ceasefire was declared over on 8 July, the Strait of Hormuz was closed from 11 July (US blockade 14 July) and remained closed at the 7 August anchor, and an ADNOC tanker was attacked at sea on 8 August	The study now states the anchor-date facts plainly, relabels the cases so that recovery is conditioned on a de-escalation that had not occurred, publishes the continuation central beside it, and carries a dated 17-August postscript for the newest events (tankers hit 12/14 August; Iran-Oman reopening agreement announced and the formal ceasefire ended 17 August)
The study's own first edition vs the external audit — recorded on the same terms as any other source discrepancy	The audit found the first edition carrying a stale ceasefire reading (above); missing the regulator's current tariff instrument (v1.3 of 17-Sep-2025 and v1.4 of 6-Feb-2026, with explicit caps and the no-indexation rule) and the Nov-2025 fees-and-fines resolution; overstating the refinancing scope (one tranche extended, not both); a receivable shown at its current portion in three balance-sheet columns; and a stale peer mark. The re-check that followed also found, and this register discloses, a FY2025 statement-face mis-split (G&A 256.383 / other income 24.430, where the first pass carried 246.577 / 14.624 — both pairs close the operating-profit identity, which is why the assertion never caught it) and a rental-income double-count against the investment	Every item is corrected in the revised deliverables; the full list with prices is in the accompanying critique-response note. The mis-split is a reminder that an identity check constrains SUMS, not splits — the note-level composition (note 29) is now the control

	properties	
Peer market value dating	The relative lens was originally struck on a data-provider mark dated 22-Jun-2026 while the study anchored 7-Aug-2026 — the same input carrying two dates inside one document set, and the peer had itself sold off ~10% between them	Peer marks are restruck on the anchor dates (Tabreed 2.46 on 6/7-Aug-2026; trailing multiple on trailing operating EBITDA, like-for-like) and the dating rule — one anchor for every market input — is stated
A peer's quarterly earnings figure	One aggregator rendered Tabreed's quarterly EBITDA in dollars where the company release states dirhams — a transcription error in the aggregator	The company release figure was kept; the incident is recorded here as a reminder of why peer figures are cross-checks only, never build sources
Empower "next earnings date"	An aggregator listed a mid-August earnings date after the half-year results had already been released on 5 August	Ignored in favour of the company's own filing dates
Consensus price targets	Aggregator pages carry sell-side consensus figures for the shares	Not used anywhere in the study: this research publishes fair-value ranges and distributions, never price targets, and imports nobody else's

Disclosure

This document accompanies an educational valuation study. For information only — not investment advice. It contains no recommendation, rating or price target. Sources are listed so that readers can verify the analysis independently; where a figure is derived, implied or estimated rather than disclosed, that is stated in the register itself.
