

Modon Holding PSC — bibliography and input register

Companion to the 9 August 2026 valuation study · ADX: MODON

1 · Primary documents

Document	Period	Retrieved from	Used for
Audited consolidated financial statements, Modon Holding PSC (signed 18 Feb 2026)	FY2025 + FY2024 comparatives	modon.com investor relations (fy-2025-adx.pdf)	all FY2025/FY2024 statement lines, notes 1–36
Audited consolidated financial statements, Modon Holding PSC (scanned original)	FY2024	modon.com investor relations	cross-check only (no text layer; figures from the FY2025 comparatives)
Audited consolidated financial statements, Q Holding PSC	FY2023 + FY2022 comparatives	modon.com investor relations	FY2023/FY2022 statement lines (predecessor perimeter)
Interim condensed consolidated financial statements (reviewed)	H1-2026	modon.com investor relations	study-year actuals; 31-Dec-2025 comparative cross-checks
Annual Report 2025	FY2025	modon.com investor relations	segment KPIs, masterplan disclosures, sales/units, backlog composition
FY2025 results announcement (18 Feb 2026)	FY2025	modon.com media centre	backlog AED 46.0bn, adjusted EBITDA, net-cash definition
ADX disclosure portal copies of the above	various	apigateway.adx.ae	availability confirmed; not needed as the company site served everything
UAE MoF/CBUAE dirham treasury auction results (July 2026)	Jul-2026	wam.ae (state news agency reporting the official auction)	AED sovereign yield 4.48% (Jan-2031 tranche)
Damodaran country risk dataset (ctryprem), January 2026 update	Jan-2026	pages.stern.nyu.edu	UAE Aa2 row: default spread 0.42%, ERP 4.87%; Egypt row for the stress case
ADREC Abu Dhabi Real Estate Market Report 2025	2025	adrec.gov.ae / mediaoffice.abudhabi	market size, growth, off-plan share, foreign-buyer share
Aldar Q4-FY25 results release · Emaar FY2025 release · Emaar Development FY2025 release	FY2025	aldar.com / emaar.com	peer fundamentals (cross-check only)
Turner & Townsend UAE Market Intelligence 2025; MEED/Currie & Brown 2026 outlooks	2025-26	public summaries	construction-cost escalator (~3-4.5%/yr)
CBUAE EIBOR fixings (31 Mar 2026 set)	Mar-2026	secondary mirrors (CBUAE page returned HTTP 403 at this session's network; logged)	6M EIBOR 3.71%
H1-2026 results announcement (29 Jul 2026)	H1-2026	modon.com media centre	backlog 65.4bn/95%

		(verified via official-release syndication)	dev; H1 sales 26bn; net debt 912; unrestricted cash 8.6bn; adj. EBITDA 3.0bn; 3,613 keys/16 hotels — the revision-2 restrike anchors
Damodaran emerging-markets industry betas (betaemerg.xls, saved 07-Jan-2026)	Jan-2026	pages.stern.nyu.edu	industry-beta cross-check (RE Development unlevered 0.45; rejected as primary, receipt in the study)
Uploaded ADX daily price history for MODON (1,577 sessions, Dec-2017 – Aug-2026)	to 7 Aug 2026	user-supplied export	price anchor, volatility model, technical read, beta regression (against the official index below)
FTSE ADX General Index daily history (3,884 sessions, Jan-2011 – Jul-2026)	to 24 Jul 2026	user-supplied export	beta regressor — the stock's own local index; screened for data quality (249.7 sessions a year on ADX's calendar, no impossible moves, no repairs needed)

2 • Negative results — searched, not found

What was sought	Where	Outcome
FTSE ADX General Index daily history (beta regressor)	stooq (^adx, ^adi, adsmi — JS challenge); Yahoo Finance FADGI.FGI / FADX15.FGI / ^ADI / ^ADSMI (v8 and v2, rate-limited); investing.com page + API; TradingEconomics chart API; WSJ/MarketWatch charting API; FMP; adx.ae + apigateway.adx.ae	CLOSED at revision 3 — ten sources failed over two sessions and the series was supplied directly by the requester on 10-Aug-2026 (3,884 sessions, 02-Jan-2011 to 24-Jul-2026). Beta is now the tier-1 own-stock regression against the official index; the proxy composite is retired. The failure was not cosmetic: the proxy under-read beta at every window (5y 1.118 vs 1.278 official), because the official index is 1.30x less volatile than the composite at a similar correlation. Logged here because a negative result that is later closed is evidence about how much the substitute cost.
UAE sovereign CDS spread (for a CDS-basis equity premium)	Damodaran ctryprem, January 2026	Published as NA for the UAE — no CDS-basis cost of capital can be built; the rating basis stands alone.
Quantified remaining-performance-obligation (backlog) table inside the audited statements	FY2025 financial statements	Not disclosed at that level in the notes; the AED 46.0bn backlog and its 93% development share come from the results announcement and annual report.
Per-project volumes and prices	annual report, results releases	Disclosed only as totals (units and value by geography); the revenue build therefore stops at segment level with unit-level anchors, and says so.
A dividend policy	FY2025 results release, annual report, statements	None paid to owners in FY2024–25, none proposed — the zero in the model is sourced.
Real-estate/events technology substitution risk	sector press 2025-26	Nothing material found.
Sanctions or supply-chain exposure relevant to the model	sector press 2025-26	Nothing material found.

3 · Judgements — and what would overturn each

Judgement	Basis	What would overturn it
Base sales path: post-H1 new sales AED 12bn (H2-26), then 30bn fading to 21bn/yr — every year below the 52bn annualised H1 pace	H1-2026 ACTUAL sales of 26bn; ADREC structural demand; Modon share of Abu Dhabi residential	two consecutive halves of new sales below AED 8bn, or an Abu Dhabi residential downturn
Development margin glide 41% → 38%	FY2025 43.7% and H1-2026 41.3% actuals; construction escalator vs price escalation	arms-length land sales clearing below 20% gross margin; tender inflation >6%/yr sustained
Working capital: component build absorbs through FY2028, releases only late	receivable days 440 at both audited anchors; advances cover 1.86x and declining; land-bank draw vs new-WIP add — calibrated at 31-Dec-25 and 30-Jun-26	FY2026 statements showing receivable days rising above ~470, or advances cover falling faster than assumed
Tax at 15.5% (DMTT floor + foreign uplift)	note 11 (DMTT charged from 2025); H1-2026 effective 15.4%	a DMTT carve-out, or foreign profits growing beyond ~1/4 of the mix
Beta 1.746 — own-stock weekly regression vs the exchange's published index (FTSE ADX General), thin-trading corrected	253 weekly observations over 4.9 years to 17-Jul-2026: SE 0.397, R ² 0.128, 90% range 1.09-2.40, usability gate PASS. The thin-trading correction is worth +0.35 of beta (uncorrected 1.394 on the same weeks) and is warranted by a float with 84.75% in one holder. Long-run-adjusted cross-check 1.497; industry route rejected as primary	the wide interval resolving low — at the bottom of the 90% range the cash-flow lens is worth materially more; equally, a longer index history or a less thinly traded float could move it either way. This is the study's largest single exposure to one input
Terminal ROIC 8.5% — between the FY2025 clean 6.1% and the model's own forward path (~15%)	at-cost land bank converting to recognised profit; deliberate mean-reversion below the path	land monetisation stalling: at the clean achieved return the terminal value falls ~16% and the DCF ~11% (computed, not estimated)
No conflict premium in the cost of equity (mid-2026 regional practice was +1pt)	July-2026 AED sovereign auction at ~4bp over US Treasuries	regional escalation reflected in the sovereign curve — re-add the point (strip shown)
Lens weights 40/20/20/20	contracted backlog justifies a DCF anchor; tight float keeps market lenses honest	a float event or dividend policy would raise the market lenses' weight

3b · Corrections adopted at revisions 2 and 3 (external audits, re-audit, official index)

Item	First edition	Revision 2	Why
Development backlog driver	42,600 (31-Dec-25)	62,130 (30-Jun-26, 65.4bn × 95%)	H1-2026 release superseded the anchor 11 days before publication
FY2026 new development sales	26,000 assumed for the full year	AED 26bn H1 ACTUAL + 12bn H2 assumption	the assumption was already achieved in six months
Bridge cash	gross 12,642 incl. ~4.0bn escrow	available 8,600 (disclosed)	escrow funds completion of the backlog being valued — double-count
Bridge date	31-Dec-2025 rolled 219 days	30-Jun-2026 rolled 38 days	the balance sheet moved against the roll across that window
Terminal debt weight	assumed 15%	derived from the model's own FY2030E (~8%)	internal coherence
Working capital	assumed release schedule	component build (days/cover/land-bank), absorbing through FY2028	H1 actuals show absorption while growth runs
D&A driver	4.2% of revenue	3.4% on the average asset base	asset-base charge
Beta	1.0 assumed (tier-3)	1.03 regressed vs panel proxy	evidence obtained
Beta (revision 3)	1.03 vs a self-built composite	1.746 vs the exchange's published	the official index was obtained; a

	of covered names	index, thin-trading corrected	composite of covered names is a coverage artefact, not a market. Two separate corrections, both upward: the benchmark swap (+0.36, the index is less volatile than the composite) and the thin-trading correction (+0.35, 84.75% of the float is held by one entity)
Peer table	mixed bases/vintages; multiples irreconcilable	one attributable basis, every multiple = printed numerator/denominator	Aldar backlog was the 9M-2025 vintage; Emaar Dev backlog was the parent's figure; Emaar NP was disclosed, not n/d
Relative lens	silent average of two legs 43% apart	P/E leg only; EV/EBITDA a labelled unanchored cross-check	method disagreement was hidden
NCI in the bridge	book 847	capitalised max(book, 2% of equity value)	consolidated premium implies NCI premium
Expert 3 multiple	6.5x called the "centre"	6.2x = the stated mean	the statistic now matches its label
Expert 1 land mark-up	35% called "half of 67%"	33.7% = exactly half	wording-number mismatch (self-found)
Sensitivity grid	centre cell $\neq$ base case	rebuilt; centre = base	convention mismatch between grid and base
Prose corrections	"worth about AED 1/sh" (WC); "roughly halves" (terminal); "just below the resistance"; MACD at 2dp; conversion-direction caption	each restated with the computed number	audit findings, all verified

4 · Aggregator-discrepancy notes

Item	Primary figure	Aggregator figure	Resolution
MODON trailing P/E	computed 11.78x (46,262/3,926, group profit basis)	stockanalysis.com shows 11.33x (attributable basis)	both stated; the study quotes its own computed basis and labels it
FY2024 net profit	AED 9,389mn as reported (incl. AED 9,192mn bargain gain)	some feeds show ~AED 197mn ("adjusted")	both framings carried throughout (dual-framed)
Shares outstanding	16,347,080 thousand (note 23)	16.35bn (rounded)	note 23 figure used everywhere
EIBOR	CBUAE official page unreachable (403) this session	mirrors quote 3M 3.66% / 6M 3.71% (31-Mar-2026 set)	mirror figures used, dated, and flagged as secondary

5 · The full input register

Every input the model consumes — 215 entries — with value, source and date, grouped by research layer. Values are AED million unless the label says otherwise.

Market layer — 1 inputs

Input	Value	Source	Date
spot	2.83	Uploaded ADX daily price history, last close	2026-08-07

Company layer — 153 inputs

Input	Value	Source	Date
shares_mn	16,347.08	Share capital note 23: 16,347,080 thousand shares of AED 1 each, Audited consolidated financial statements FY2025, Modon Holding PSC, signed 18-Feb-2026, modon.com investor relations	2026-02-18

limad_stake	0.8475	L'imad Holding Company PJSC's holding, computed from the disclosed share count; the FY2025 results release rounds the same holding to 84.76% and both readings are published rather than one chosen. Audited consolidated financial statements FY2025, Modon Holding PSC, signed 18-Feb-2026, modon.com investor relations	2026-02-18
limad_stake_rounded	0.8476	the same holding as the company announcement rounds it, published beside the computed figure rather than instead of it. Audited consolidated financial statements FY2025, Modon Holding PSC, signed 18-Feb-2026, modon.com investor relations	2026-02-18
rev_fy23	994.293	Consolidated statement of profit or loss (revenue from contracts 473.338 + rental 409.058 + dividends 111.897), Audited consolidated financial statements FY2023, Q Holding PSC, modon.com investor relations	2024-02-15

asset_base_30jun	19,736.134	Depreciable base at 30-Jun-2026: PP&E 8,702.928 + investment properties 9,496.084 + right-of-use 529.636 + intangibles 1,007.486, Interim condensed consolidated financial statements, 30-Jun-2026 (reviewed, unaudited), modon.com investor relations	2026-08-07
beta	1.746	TIER 1 — own-stock weekly regression against the PUBLISHED INDEX OF THE EXCHANGE THE STOCK IS LISTED ON (FTSE ADX General, raw_indices/AE/FADGI.csv, as of 2026-07-24), produced by the house regression module and passed through the beta-provenance gate, not by a study-local script. Dimson lead-lag corrected, which matters here: 84.75% of the shares sit with a single holder, and non-synchronous trading biases a naive beta DOWNWARD — the correction is worth +0.352 of beta (1.394 naive on the same weeks). Diagnostics: SE 0.397, R2 0.128, n 253, 90% CI [1.092, 2.399], usability gate PASS. Blume cross-check 1.497. THE CONFIDENCE INTERVAL IS WIDE — this beta is quoted with its interval everywhere it supports a conclusion, never as a precise point. SUPERSEDES both earlier regressors: revision 2 used an equal-weight composite of the house UAE library (1.03 adopted) and an intermediate revision-3 pass used a study-local naive regression on the official series (1.278). A constituent composite is not a substitute and not a tier. The Damodaran EM industry route (business-weighted unlevered 0.50 -> relevered 0.56-0.59) stays REJECTED as a primary: the 786-firm Real-Estate-Development row is dominated by highly-levered Chinese developers (D/E 1.97) unrepresentative of a UAE state platform; it is retained as a lower-bound cross-check. Sensitised in steps of one standard error	2026-08-10
beta_record	beta: 1.7458; se: 0.3972; r2: 0.1285; n: 253; ci90: 1.0924 · 2.3991; usable: 1	Full beta provenance record as returned by the house regression module and accepted by the beta-provenance gate: regressor, as-of date, diagnostics, confidence interval and conformance flag	2026-08-10
beta_naive_same_weeks	beta: 1.3943; se: 0.2383; r2: 0.1192; n: 255	The same regression WITHOUT the Dimson thin-trading correction, on the same weeks, so the correction is visible rather than buried in a default argument	2026-08-10
asset_life_years	50	The LONGEST useful life the company discloses — buildings, from the property, plant and equipment accounting policy in the FY2025 consolidated statements, which gives plant 40 years, buildings 2 to 50, machinery and equipment 3 to 4, vehicles 3 to 5, office and computer equipment 2 to 5, furniture and fixtures 2 to 5, leasehold improvements the lower of the lease term or 10, and other assets 5. A WEIGHTED life CANNOT be derived here and none is invented: the note's own columns combine land with buildings (73% of gross cost, and land is not depreciated at all) and plant with machinery (a more than tenfold spread), and the charge-implied route is closed by AED 832mn of assets acquired through business combinations during the year. So the LONGEST disclosed life is taken DELIBERATELY, because it produces the LARGEST maintenance charge and therefore the LOWEST terminal of any life in the note — and the whole disclosed range is published beside it: every life from 2 to 50 years puts the terminal between 15.6% and 23.9% above the one this edition replaces and above the no-growth floor, so the DIRECTION of the correction is certain across the entire range and only its size is not.	2026-02-18
lease_int	36	Annual interest on lease liabilities (H1-2026 actual ~18 per half), now an explicit input rather than an embedded numeral	2026-08-07
fgn_share	0.1708	Revenue OUTSIDE the UAE, FY2025 audited geographic split, note 5 (11,466.934 within / 2,361.935 outside) — recognised REVENUE, not contracted sales; one external audit asserted this split is unpublished; it is note 5 of the audited statements	2026-02-18
recurring_base	6,455.178	Recurring/operating legs base = FY2025 AIM + Hospitality + ECT segment revenue (6,455.178), grown 15% to mid-cycle	2026-02-18
land_bv	26,610.771	Land plots at cost, note 19, Audited consolidated financial statements FY2025, Modon Holding PSC, signed 18-Feb-2026, modon.com investor relations	2026-02-18

rf	0.0448	AED sovereign anchor: Jan-2031 dirham T-Bond, 4.48% YTM, July-2026 auction, ~4bp over UST (UAE MoF via WAM) — the longest liquid AED government tranche; the tenor choice (4.4y vs a perpetual stream) is stated as a limitation	2026-07-30
sov_spread_rating	0.0042	Damodaran adjusted default spread, UAE (Aa2), rating basis, January-2026 ctryprem (the July-2026 refresh carries the same UAE parameters per independent verification; vintage stated)	2026-01-05
erp_rating	0.0487	Damodaran total ERP, UAE row, rating basis	2026-01-05
erp_cds_na	NA	No UAE sovereign CDS row is published — the CDS-basis WACC cannot be built; rating basis stands alone, stated	2026-01-05
eibor6m	0.0371	EIBOR 6M 3.71% (31-Mar-2026 published set; the CBUAE page again refused this session — fixing retained WITH ITS DATE; a 25bp EIBOR move is ~3bp of WACC)	2026-03-31
cash_yield	0.035	Yield on cash	2026-06-17
egy_crp	0.0971	Damodaran CRP, Egypt (Caa1), Jan-2026	2026-01-05

Industry layer — 2 inputs

Input	Value	Source	Date
beta_industry_check	unlevered_weighted: 0.501; relevered_fy25: 0.563; relevered_h1: 0.588	Damodaran January-2026 EM industry betas (betaemerg.xls, saved 07-Jan-2026): RE Development unlevered 0.452 (cash-corrected, 786 firms, D/E 1.97), RE Operations 0.590, Hotel/Gaming 0.580; gross-profit-weighted and relevered at Modon's structure. Cross-check only	2026-01-07
peers	ALDAR: name: Aldar Properties (ADX); spot: 7.78; shares_mn: 7,862.6; mcap: 61,171; np_attr: 7,548; eps: 0.96; EMAAR: name: Emaar Properties (DFM); spot: 11.5; shares_mn: 8,838; mcap: 101,650; np_attr: 17,599; eps: None; EMAARDEV: name: Emaar Development (DFM); spot: 13.38; shares_mn: 4,000; mcap: 53,520; np_attr: 11,316; eps: None	Peer table REBUILT at revision 2 on one attributable-earnings basis from the peers' own audited filings/releases (figures per the external audits' primary-source checks, adopted after verification); market caps from prices at 07-Aug-2026. Cross-check only	2026-08-09

House layer — 50 inputs

Input	Value	Source	Date
ke_rev2_published	0.0908	Cost of equity as revision 2 published it, on the composite-index beta this study has since replaced. Superseded; recorded so the change can be stated without typing the old number.	2026-08-10
central_rev2_published	3.38	The weighted central as revision 2 published it, on the composite-index beta. Superseded; recorded for the same reason.	2026-08-10
conv_path	$0.105 \cdot 0.25 \cdot 0.28 \cdot 0.3 \cdot 0.32$	Backlog conversion on opening development backlog (H2-2026 is a half-year rate). Anchor: H1-2026 realised development revenue ex-land 4,237 = 9.9% of the 42,600 opening — a ~20-23% annualised pace on a growing base, stepping up as the record construction book mobilises	2026-08-09
new_sales	$12,000 \cdot 30,000 \cdot 26,000 \cdot 23,000 \cdot 21,000$	New development sales, BASE path, POST-H1 (the AED 26bn H1-2026 actual is already inside the opening backlog): H2-2026 12bn (no assumed repeat of the 13bn Golf Estates launch), then fading 30->21bn/yr — still below the 52bn annualised H1 run-rate throughout	2026-08-09
land_rev	$700 \cdot 1,400 \cdot 1,300 \cdot 1,200 \cdot 1,100$	Point-in-time land and plot sales: H1-2026 actual was 1,438; tapering path	2026-08-09
red_margin	$0.41 \cdot 0.4 \cdot 0.39 \cdot 0.385 \cdot 0.38$	RED gross margin: FY2025 43.7%, H1-2026 actual 41.3%; glides to 38% as related-party land mix fades and the ~4% tender-price escalator runs ahead of ~2% realised-price escalation	2026-08-09
aim_growth	None $\cdot 0.09 \cdot 0.085 \cdot 0.08 \cdot 0.08$	AIM revenue growth off the FY2026E base; H2-2026E set directly	2026-08-09
aim_h2	385	AIM H2-2026E revenue: H1 actual 361 with contracted occupancy 96% and GLA additions	2026-08-09
aim_margin	$0.68 \cdot 0.66 \cdot 0.65 \cdot 0.64 \cdot 0.64$	AIM gross margin: FY2025 64.3%, H1-2026 actual 71.6%; held near the blend	2026-08-09
hosp_growth	None $\cdot 0.07 \cdot 0.07 \cdot 0.06 \cdot 0.06$	Hospitality growth off FY2026E; H2 set directly	2026-08-09
hosp_h2	452	Hospitality H2-2026E: H1 actual 388 plus the winter-season weighting (H2-2025 was 52% of the year)	2026-08-09
hosp_margin	$0.29 \cdot 0.28 \cdot 0.29 \cdot 0.3 \cdot 0.3$	Hospitality gross margin: H1-2026 actual 27.2%, recovering to 30%	2026-08-09
ect_growth	None $\cdot 0.045 \cdot 0.043 \cdot 0.041 \cdot 0.039$	ECT growth off FY2026E; H2 set directly	2026-08-09
ect_h2	3,000	ECT H2-2026E: H1 actual 2,775 plus the H2-weighted events season (ADNEC calendar; Arena full-period)	2026-08-09
ect_margin	$0.29 \cdot 0.27 \cdot 0.275 \cdot 0.28 \cdot 0.28$	ECT gross margin: H1-2026 actual 19.9% (temporary-infrastructure mix), recovering toward the FY2025 26.5% as the events season carries H2	2026-08-09
oth_rev_f	-30	Others / eliminations, full-year rate	2026-08-09
oth_gp_f	-120	Others gross loss, full-year rate (H1-2026 actual -57.5)	2026-08-09
ga_pct	$0.083 \cdot 0.088 \cdot 0.087 \cdot 0.086 \cdot 0.085$	G&A / revenue. Anchors stated: FY2025 11.19%; H1-2026 headline 7.46% flattered by a -77.9 ECL reversal — ex-reversal 8.30%. The path glides 8.3% -> 8.5-8.8%, i.e. BELOW FY2025 on realised operating leverage but ABOVE the flattered H1 print. The first edition's conservatism claim is withdrawn: this is a generous assumption relative to FY2025 and is now labelled as such	2026-08-09
sm_pct	$0.017 \cdot 0.018 \cdot 0.017 \cdot 0.017 \cdot 0.016$	S&M / revenue: FY2025 1.93%, H1-2026 1.64%	2026-08-09
invinc_f	$80 \cdot 165 \cdot 170 \cdot 175 \cdot 180$	Investment and other income, recurring component (H1-2026 actual 71 incl. one-offs)	2026-08-09
assoc_f_path	$95 \cdot 210 \cdot 227 \cdot 245 \cdot 264$	Associate/JV income: H1-2026 actual 88.3 post the Q2 JV disposal; ~8%/yr thereafter	2026-08-09
dna_rate	0.034	Depreciation & amortisation as a rate on the AVERAGE depreciable asset base (PP&E + investment properties + right-of-use + intangibles): FY2025 charge 610.5 on an average base of ~17,940 = 3.4%. Respecified off the asset base at revision 2 — the first edition drove D&A off revenue, a mis-specified driver both external audits flagged	2026-08-09
capex_f	$700 \cdot 1,500 \cdot 1,550 \cdot 1,600 \cdot 1,650$	Capital expenditure (H2 stub then annual): H1-2026 actual 312.5 (PP&E 206.9 + intangibles 63.5 + IP 42.0); rising with Olympia and venue pipeline	2026-08-09
tax_f	0.155	Effective tax: DMTT 15% floor + foreign uplift; H1-2026 actual 15.4%	2026-08-09
nci_pct	0.02	NCI share of profit: H1-2026 actual 1.8%	2026-08-09
dso_path	$440 \cdot 430 \cdot 410 \cdot 390 \cdot 370$	Receivable days (trade + contract + related-party receivables over revenue): FY2025 439 days, 30-Jun-2026 440 days — held flat through 2026 then declining as Department-of-Finance balances collect. THE collection caveat in one driver	2026-08-09

inv_addition	0.1	New-project WIP added per dirham of new development sales (mobilisation, infrastructure)	2026-08-09
inv_consumption	0.2	Share of RED direct costs drawn from the existing land bank / WIP (land content of cost of sales)	2026-08-09
pay_cover	$1.86 \cdot 1.7 \cdot 1.55 \cdot 1.45 \cdot 1.4$	Trade payables + customer advances + related-party payables as a multiple of annual direct costs: FY2025 2.62x (advance-heavy), 30-Jun-2026 1.86x; declining as handovers recognise advances. This is the presale-funding mechanism: customers, not the balance sheet, fund construction	2026-08-09
beta_retired_regressors	rev2_proxy_composite: 1.03; rev3_naive_on_official: 1.278	Retired regressors, kept so the swap can be priced: the revision-2 equal-weight composite of the house UAE library, and the intermediate study-local naive regression on the official series	2026-08-10
beta_rev2_published	1.03	The beta PUBLISHED at revision 2 (proxy composite). Registered so the correction can be stated against what readers actually saw	2026-08-09
g_term_real	0	Terminal REAL growth of ZERO: the business is assumed to hold its scale in real terms in perpetuity, and the nominal rate is computed from the long-run inflation this valuation uses throughout. The previous edition typed 2.50% nominal and its entire justification was the words 'Terminal growth 2.5%' — against a 2.0% long-run rate that is real growth of half a point a year, for ever, which nothing in the study argued for. A growth rate quoted only in nominal terms cannot be checked: nobody reading 2.5% can tell whether it means inflation plus half a point or inflation minus one.	2026-09-04
roic_term	0.085	Terminal ROIC 8.5% — deliberately BELOW the model's own forecast path (which reaches ~15% by FY2030E as invested capital shrinks while NOPAT grows): a mean-reversion margin of safety on the block that carries ~70% of EV, and above the FY2025 clean achieved 6.1% because the at-cost land bank converts. Both anchors stated; the step-down is a choice, priced in sensitivity	2026-08-09
debt_path	$10,300 \cdot 10,500 \cdot 9,700 \cdot 8,800 \cdot 7,900$	Gross debt path incl. related-party loan from the 30-Jun-2026 actual 9,542: construction peak then amortising	2026-08-09
wd_term_derived	0.0802	Terminal debt weight DERIVED from the model's own FY2030E balance sheet: gross debt / (gross debt + book equity). Assumed-15% retired at revision 2	2026-08-09
anchor_days	38	Days from the 30-Jun-2026 valuation date (reviewed balance sheet) to the 7-Aug-2026 price anchor — the first edition's 219-day accretion from 31-Dec-2025 is retired with the restrike	2026-08-09
new_sales_runoff	$8,000 \cdot 15,000 \cdot 11,000 \cdot 9,000 \cdot 8,000$	RUN-OFF path, post-H1: launches halve from the realised pace and fade — now a stress reading, not a live alternative: the H1-2026 disclosure (26bn in six months) falsified the first edition's run-off premise as a central scenario	2026-08-09
red_margin_runoff	$0.4 \cdot 0.385 \cdot 0.37 \cdot 0.36 \cdot 0.35$	Run-off margins	2026-08-09
new_sales_bull	$15,000 \cdot 34,000 \cdot 34,000 \cdot 34,000 \cdot 34,000$	GROWTH-HOLD path: sales hold near the realised H1-2026 annualised pace less the launch effect	2026-08-09
red_margin_bull	$0.42 \cdot 0.42 \cdot 0.41 \cdot 0.41 \cdot 0.4$	Growth-hold margins (published in full at revision 2 — the first edition left this vector undisclosed)	2026-08-09
pe_just	7.5	Justified P/E on FY2026E attributable profit: peer attributable trailing set 4.7x / 5.8x / 8.1x (EmaarDev / Emaar / Aldar). 7.5x = parity-minus with the sector leader: the growth and recurring-income premium and the 15%-float/related-party discount are treated as offsetting, stated as a judgement. (The first edition's 8.0x was described as a premium to Aldar off a broken peer table)	2026-08-09
ev_ebitda_just	7	EV/EBITDA 7.0x — HOUSE JUDGEMENT WITHOUT A PEER ANCHOR (no peer EV/EBITDA is computable from reachable disclosures: peer net debt not held). Shown as a cross-check only; EXCLUDED from the lens average at revision 2	2026-08-09
norm_sales	20,000	Through-cycle development sales raised 18bn -> 20bn: the realised H1-2026 26bn lifts the cycle evidence; still far below the 38bn FY2026E in-year pace	2026-08-09
norm_margin	0.115	Through-cycle net margin	2026-08-09
norm_pe	8.5	Through-cycle P/E	2026-08-09
roe_sust	0.075	Sustainable ROE 7.5%. Receipts, one cleaning only: mechanical FY2025 clean ROE (ex the 735.1 of fair-value/disposal gains, tax-effected) = 6.6%; the model's own forward attributable ROE path runs 7.8% -> 9.8%. 7.5% sits between the two, below the forward path — a forward-sustainable judgement, not a historical cleaning (the first edition conflated the two)	2026-08-09
lens_weights	dcf: 0.4; relative: 0.2; normalized: 0.2; book: 0.2	Weights unchanged: DCF primary on backlog visibility; three market lenses carry 60% jointly — that structure, not an additional holdco discount, is how float/governance friction is priced (a 30% haircut on top would double-count	2026-08-09

		it; the reading is still shown in section 4)	
e1_land_uplift	0.337	Expert 1 land mark-up = exactly HALF the realised 67.4% related-party land-sale gross margin (1 - 818.033/2,512.837), as the arms-length haircut — the first edition said "half" but used 35%; aligned at revision 2	2026-08-09
e2_rp_haircut	0.25	Expert 2 haircut on the related-party receivable book (30-Jun-2026: 10,756 gross due-from)	2026-08-09
e3_pe	6.2	Expert 3 multiple = the arithmetic MEAN of the rebuilt attributable peer set (4.73 + 5.78 + 8.10)/3 = 6.20x — the first edition claimed "centre of the set" but used 6.5x; the statistic is now the one named	2026-08-09
