

This register lists every source behind the valuation study and the accompanying workbook. It separates the company's own issued documents, which are the only permitted source for anything the company itself reports, from external material used for market context and forecast drivers, and from cross-checks that inform no figure.

1. The company's own issued documents

Obtained from the company's investor-relations page at kimaegypt.com, which serves its filings through the Mist investor-relations portal. Every document was downloaded, opened and read; all are scanned images, so each figure was read from the statement itself and crossfooted against its own subtotals.

Document	Period	Report date	Auditor	Retrieved	What it sources
Audited financial statements, ten annuals	Years to 30 June 2009, 2010, 2011, 2013, 2014, 2016, 2018, 2019, 2020 and 2021 (with each prior year as comparative)	2009 to Nov 2021	Central Auditing Organization	1 Sep 2026	The eighteen-year reported history on which the forecasting method was tested before use; not a source of any forecast driver
Audited financial statements	Year to 30 June 2022 (as comparatives)	8 Oct 2023	Central Auditing Organization; PKF Rashed Badr & Co	8 Aug 2026	Opening income statement and balance sheet of the four-year history
Audited financial statements	Year to 30 June 2023	8 Oct 2023	Central Auditing Organization; PKF Rashed Badr & Co	8 Aug 2026	Peak-utilisation reference year; cost-of-sales and selling-cost notes
Audited financial statements	Year to 30 June 2024	23 Oct 2024	Central Auditing Organization	8 Aug 2026	Trough-utilisation year; the one-off investment-property revaluation gain; the repayment of the pound tranche of the project loan
Audited financial statements	Year to 30 June 2025	23 Sep 2025	Central Auditing Organization	8 Aug 2026	The anchor year: note 20 revenue split, the auditor's production and unit-cost table, note 21 cost of sales, note 22 selling cost, note 18 loans, note 14 share capital, note 28 gas price and capacity plates, the appropriation statement
Interim statements, limited review	Three months to 30 September 2025	13 Nov 2025	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	Export volume and price movement; the gas-loss quantification and its unit valuation
Interim statements, limited review	Six months to 31 December 2025	10 Feb 2026	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	Margin confirmation; the partial disposal of the listed stake
Interim statements, limited review	Nine months to 31 March 2026	20 May 2026	Central Auditing Organization; Nasr Abou El Abbas & Co (Morison Global)	8 Aug 2026	The balance sheet used in the equity bridge; the company's own budget column; the translation loss on the dollar debt

The ten annual statements for 2009 to 2021 in the first row were retrieved on 1 September 2026 and used only to test the forecasting method on the company's own history; no forecast driver is taken from them. Also indexed on the same portal but not used: the quarterly board and shareholder-structure

disclosure reports through 30 June 2026. The portal's audit-reports section holds only audit-committee reports and its newest item covers the period to 31 December 2021; the statutory auditor's reports for the years used here are bound inside the annual statements above.

2. Market data, sovereign data and macroeconomic series

Item	Value used	As of	Source	Where it is used
Share price	EGP 14.41	6 Aug 2026	Exchange close, from the study's own price library	Market capitalisation, the equity weight in the cost of capital, and every comparison
Share count	1,986,578,999	30 Jun 2025	Note 14 of the audited statements	Per-share values. NOT taken from an exchange page or an aggregator
Ten-year government bond yield	23.00%	6 Aug 2026	Market quote	The observed risk-free rate before normalisation
Treasury bond coupon cross-check	23.098%	2026	New EGP 120.9bn issue to May 2029	Corroborates the sovereign yield above
Sovereign rating and default spread	Caa1, 6.37%	Jan 2026	Country-premium workbook, Egypt row, read from the original file	Normalisation of the risk-free rate, rating basis
Country equity risk premium	9.71%	Jan 2026	Same workbook: the total rating-basis premium less the mature-market premium	The country component of the equity premium
Total equity risk premium	13.94% (rating) / 9.41% (CDS)	Jan 2026	Same workbook, both columns	Cost of equity, published on both bases
Exchange rate	EGP 49.79 per US dollar	7 Aug 2026	Market quote	The starting point of the currency path
Urea, granular, free on board Egypt	US\$545 per tonne	7 Aug 2026	Listed futures contract	The export-price anchor and the crux sensitivity
Egyptian headline inflation	14.3% year on year	June 2026	Official statistics	The domestic cost escalator
Policy rate	19.50% main operation rate, mid-corridor	9 July 2026	Central bank decision	Context for the rate path; the terminal build uses the inflation target, not this rate
Treasury-bill yields	24.86% to 25.52% by tenor	6 Aug 2026	Secondary market quotes — the central bank's own auction pages were unreachable	Context only; no valuation figure depends on them

3. External context and forecast drivers

These sources inform forward-looking judgements. None of them is a source for any figure the company reports about itself.

Subject	What it establishes	Source type	Date
Egyptian gas curtailment	Industrial gas rationing after the interruption of Israeli export flows; producers curtailed by up to half	Energy and commodity press	Mar 2026
Regional urea supply shock	Middle East conflict lifting global urea above US\$700 a tonne; the region carries about 35% of seaborne trade	Commodity research	Mar 2026
Fertilizer quota regime	Cabinet decision 170 of 24 November 2021 and trade-ministry decree 241 of 2021; the September 2025 revision; the 2026 switch to a 10% ad-	Government decisions, as recorded in the auditor's reports and in press	2021 to 2026

	valorem export duty	coverage	
Egyptian nitrogen capacity	About 7.2 to 7.3 million tonnes a year across the named producers	Industry analysis	Mar 2026
Local fertilizer prices	Subsidised supply at about EGP 6,000 a tonne against open-market sacks at EGP 1,400 to 1,600 per 50 kilograms	Egyptian press	2025-2026
Project contractor and scope	The engineering consortium, the contract value and the settlement history of the earlier project	Contractor announcements, corroborated against the notes to the audited statements	2022 to 2025
Carbon border adjustment	European reporting obligations reaching Egyptian nitrogen exports from 2026	Auditor's report; European policy	2025-2026

4. Cross-checks, used to test and never to build

Cross-check	What it was used for	Why it is not a build source
Financial data aggregators	Confirming the ticker, the fiscal-year convention and the order of magnitude of market capitalisation	Aggregators restate and normalise; the company's own statements are the only permitted source for its reported figures
Press reporting of half-year profit	A first sanity check on the interim result before the filing itself was read	Superseded entirely by the reviewed statements
Peer capacity and location	Framing the freight disadvantage of an inland plant	Peer data informs comparison only, never this company's own history

5. Access notes, including what could not be obtained

REACHED — <https://www.kimaegypt.com/InvestorsRelations.aspx>

Company's own IR page. This session's original proxy refused CONNECT (403); the user opened an unrestricted environment and a network-enabled helper session retrieved the page and every filing. The page embeds the IR portal from mistnews.com (the company's IR-portal provider); the PDFs are the company's own issued filings.

REACHED — <https://www.mistnews.com/ir/ir.aspx?sk=1034241017>

KIMA's IR portal (Financial Statements / Disclosure Reports / Audit Reports / Share Price / News). Source of all seven filing PDFs; full index in filings/SOURCES.md.

NOT REACHED — <https://www.egx.com.eg/en/CompanyProfile.aspx?ISIN=EGS38201C017>

Exchange disclosure portal behind an F5/TSPD JS bot-challenge: WebFetch 503, curl got the challenge HTML, headless Chromium reset — even from the unrestricted helper. Exchange-stated share count therefore NOT obtained from EGX; the share count is taken from note 14 of the audited FY2024/25 statements instead (1,986,578,999 x EGP 5).

NOT REACHED — <https://www.cbe.org.eg/en/auctions/egp-t-bills>

CBE auction pages WAF-blocked ('requested URL was rejected') from the helper too; T-bill yields carried from secondary quotes (investing.com), labelled as such.

REACHED — <https://www.kimaegypt.com/InvestorsRelations.aspx>

Reachable directly (HTTP 200) on 1 September 2026; the embedded Mist portal listing page timed out once and returned a 709-byte stub on retry, so the 8 August index was used.

REACHED — <https://www.mistnews.com/mistsat/companies/mezanyat/>

Ten older annual statements (years to June 2009, 2010, 2011, 2013, 2014, 2016, 2018, 2019, 2020, 2021) retrieved as real PDFs from the company's own portal for the calibration of the method on the company's history. The portal lists no annual for 2012, 2015 or 2017 and nothing older than 2009; no FY2025/26 annual had been published.

NOT REACHED — <https://kima.com.eg/>

Refused at the egress proxy; not the company's domain (kimaegypt.com is).

Two consequences follow and both are stated in the study itself. The share count comes from the audited statements rather than the exchange, and treasury-bill yields are secondary quotes rather than auction results. Neither substitution touches a figure the company reports about itself.

6. The full input register — every input, four fields, grouped by layer

Value, source-and-construction, date and layer for every input the study uses. Nothing in the deliverables is an orphan number.

L1 — Primary filing — the company's own statements (193 inputs)

Input	Value	Unit	Date	Source and construction
abuk_carrying_price	81.7	EGP/share	2026-05-21	Interim statements, nine months ended 31 March 2026, note 8-1 — the price the holding is carried at, being the 31-March market close
abuk_shares_held	10,262,324	shares	2026-05-21	Interim statements, nine months ended 31 March 2026, note 8-1 — the Abu Qir Fertilizers holding, carried at EGP 81.70 a share
amort_FY2223	92	EGP m	2023-10-08	Audited financial statements, year ended 30 June 2023 (Central Auditing Organization with PKF Rashed Badr & Co, report dated 8 October 2023), amortisation of intangible assets — Modelled split of the depreciation and amortisation charge; flagged
amort_FY2324	110	EGP m	2024-10-23	Audited financial statements, year ended 30 June 2024 (Central Auditing Organization, report dated 23 October 2024), amortisation of intangible assets — Modelled split of the depreciation and amortisation charge; flagged
amort_FY2425	119.378	EGP m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 10 usufruct intangible
an_gran_nitrogen_pct	0.335	ratio	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), auditor's product cost table, where the product is named by its grade (granulated ammonium nitrate at 33.5% nitrogen)
anna_cost_egp	6,422	EGP m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 18-3 — bank-approved investment cost, agreement of 25 June 2025
anna_cost_usd	278.385	US\$ m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 18-3
anna_cwip_FY2425	3,746	EGP m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), auditor's report on the project
anna_loan_egp	5,931	EGP m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 18-3
anna_loan_usd	82.945	US\$ m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 18-3
anna_plan_sep2025	0.37	ratio	2025-11-13	Interim statements, three months ended 30 September 2025, limited review dated 13 November 2025, auditor's report
anna_progress_sep2025	0.129	ratio	2025-11-13	Interim statements, three months ended 30 September 2025, limited review dated 13 November 2025, auditor's report — physical progress against a 37% plan
bs_capital_FY2223	5,933	EGP m	2023-10-08	Audited financial statements, year ended 30 June 2023 (Central Auditing Organization with PKF Rashed Badr & Co, report dated 8 October 2023), statement of financial position
bs_capital_FY2324	9,933	EGP m	2024-10-23	Audited financial statements, year ended 30 June 2024 (Central Auditing Organization, report dated 23 October 2024), statement of financial position
bs_capital_FY2425	9,933	EGP m	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), statement of financial position
bs_capital_M9FY2526	9,933	EGP m	2026-05-21	Interim statements, nine months ended 31 March 2026, limited review dated 20 May 2026, statement of financial position

L3 — Official external (regulator, central bank, government) (13 inputs)

Input	Value	Unit	Date	Source and construction
an_exempt_n_pct	0.342	ratio	2026-06-25	Decree No. 258 of 2026, exemption clause — pure ammonium nitrate whose nitrogen content EXCEEDS 34.2% is outside the 10% export duty, verified by joint Customs Authority and export-control sampling of the shipment. Free-zone shipments to productive enterprises are likewise exempt. A fact about the instrument, consumed by no calculation in this study: the duty is charged on the urea export leg, and urea is not exempt
cbe_inflation_target	0.07	ratio	2026-07-09	Central bank published medium-term inflation target (7% +/-2 for Q4 2026)
cpi_latest	0.143	ratio	2026-06-30	Egyptian headline urban consumer price inflation, official statistics
export_duty_2026	0.1	ratio	2026-06-25	Decree No. 258 of 2026 of the Minister of Investment and Foreign Trade, published in the Official Gazette on 25 June 2026 — 10% ad valorem on the FOB invoice value of nitrogen fertiliser exports, the invoice certified by the Chamber of Chemical Industries. It replaced a temporary US\$90/t duty imposed in May 2026 for three months; the 10% carries no stated expiry. Pure ammonium nitrate above 34.2% nitrogen and free zone shipments are exempt — urea is neither. Read from two independent reports of the instrument rather than the Gazette text, which is the remaining gap in this citation
export_levy_egp_t	2,500	EGP/t	2021-06-03	Trade and industry ministry decree 241 of 2021 — levy on the quota shortfall
inflation_terminal	0.07	ratio	2026-09-01	The inflation embedded in the TERMINAL discount rate, taken from the house macro path and NOT typed here — the SAME figure terminal growth is set at, so the two cannot drift apart. (This sentence previously described the value as 5%, the central bank's Q4-2028 target, while the path supplies 7%: a 7% value carrying a 5% justification, which is exactly the kind of unfalsifiable typed rate this series does not permit. The value has always come from the path; only the sentence was wrong.) CORRECTED 1 September 2026: the 08-08-2026 edition built the terminal risk-free rate on the 7% Q4-2026 target while growing the perpetuity at 5%, a perpetual real decline of about 2% a year that no disclosure supports (the same defect the AMOC review found, L-055). Terminal growth, the terminal risk-free rate and the terminal currency wedge now share one inflation.

policy_rate	0.195	ratio	2026-07-09	Central bank main operation rate, corridor 19.00/20.00
quota_domestic_share_2021	0.55	ratio	2021-11-24	Cabinet decision 170 of 24 November 2021 — share of output to the subsidised system
quota_free_local_2021	0.1	ratio	2021-11-24	Cabinet decision 170 of 24 November 2021

sov_spread_cds_superseded	0.0355	ratio	2026-08-08	The sovereign credit-default-swap spread the superseded premium above was reconstructed from. It appears in no source file, which is why the premium built on it was corrected; it is registered here for the same reason as the premium.
stale_listing_share_count	394,042,710	shares	2026-08-08	A stale exchange listing document surfaced in search — recorded ONLY as a documented discrepancy; it predates the March 2024 capital increase and is not used anywhere

L5 — Constructed in this study (65 inputs)

Input	Value	Unit	Date	Source and construction
abnormal_gas_path	150, 120, 100, 90, 80	EGP m	2026-08-08	Constructed: stoppage and abnormal-gas cost, decaying as supply normalises from the EGP 164.5m charged in FY2024/25.
abugir_da_estimate_pct_rev	0.05	ratio	2026-08-09	Constructed and FLAGGED: depreciation and amortisation as a share of revenue for a mature coastal nitrogen producer. Abu Qir does not publish a depreciation line in the sources reachable here, so the EBITDA denominator carries one estimated element and the multiple below is stated as approximate because of it.
ammonia_per_urea	0.6199	tonnes	2026-08-08	Constructed: FY2024/25 ammonia output divided by FY2024/25 urea output, both from the auditor's product cost table
an_conversion_cost_FY2425	157.29	EGP/t	2025-09-24	Constructed from the auditor's own product cost table: the disclosed granulated ammonium-nitrate unit cost less the ammonia embodied in it at the disclosed ammonia unit cost and the disclosed ammonia ratio. ADDED 9 August 2026 to replace a flat 32% cash-margin assumption on the whole new complex — the company discloses what a tonne of this exact product costs to make, and the study was assuming a margin instead of using it.
an_path	26000, 26000, 26000, 26000, 26000	tonnes	2026-08-08	Constructed: nitrate volume path, flat on the FY2024/25 combined granulated and low-density output.
an_price_egp_t_FY2425	20,000	EGP/t	2025-09-24	Audited financial statements, year ended 30 June 2025 (Central Auditing Organization, report dated 23 September 2025), note 20 local revenue less the subsidised and free-market urea legs, over the combined nitrate tonnage
an_t_FY2526E	26,000	tonnes	2026-08-08	Constructed for the FY2025/26 bridge year: Nitrate output for the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
anna_capex_path	2,599, 3,100, 3,300, 3,200, 2,489	EGP m	2026-08-08	Constructed: project spending path, RE-ANCHORED 9 August 2026 on the observed run rate. The first year is the company's own nine-month actual extended to a full year (EGP 1,949.1m x 4/3 = EGP 2,598.8m); the remaining years complete the EGP 14,688m still to spend against the bank-approved cost. The first issue opened at EGP 3,000m, above anything the company has actually spent in a year.
anna_cash_margin	0.32	ratio	2026-08-08	Constructed: conversion margin on ammonium nitrate over its own ammonia feedstock
anna_nameplate	189,863	tonnes/year	2026-08-08	Constructed and FLAGGED: no filing states the new plant's capacity. It is the ammonia design plate less the draw of urea at ITS design plate, converted at the ratio above.
anna_operating_days	330	days	2026-08-09	Constructed: operating days a year for a continuous nitrate line, net of the turnaround the company takes annually
anna_util_base	0.5	ratio	2026-08-08	Constructed: project utilisation in the terminal year, central case
anna_util_bull	0.7	ratio	2026-08-08	Constructed: project utilisation in the terminal year, upside case

anna_winddown_cost	1,000	EGP m	2026-08-08	Constructed: capital-discipline case only: the cost of stopping the programme in the first forecast year — contract settlement and site preservation. No filing states it; it is the study's estimate and is flagged.
beta_ci90_low	0.7165	ratio	2026-09-01	The lower bound of the ninety-per-cent confidence interval of the same beta estimate — a five-year weekly regression of the stock's own returns on the EGX30 (253 weekly observations to 16 July 2026) — carried as the beta alternative. REPLACES the 08-08-2026 edition's thin-trading-adjusted beta, which belonged to a basket regression withdrawn as non-conforming.
capex_run_rate_FY2526E	2,599	EGP m	2026-08-09	Constructed: the nine-month actual extended to a full year — the company's own latest observed project spending rate, and the near-term anchor for the forecast path
cpi_path	0.14, 0.105, 0.0825, 0.0725, 0.07	ratio	2026-08-08	DERIVED from the single Egyptian inflation path this series uses for every Egyptian company it values (as of 2026-09-02), mapped onto this company's 30 June fiscal year end: each fiscal year takes half of each of the two calendar years it spans, and beyond the path's last published year its long-run rate. That path is 2026 16.0% / 2027 12.0% / 2028 9.0% / 2029 7.5% / 2030 7.0%. No number here is chosen for this study: a company cannot be valued in an economy the study beside it does not recognise, so no valuation in this series sets an inflation rate of its own. Until 3 September 2026 this array read 10.0 / 7.0 / 6.0 / 5.0 / 5.0 and ended at 5% while the same study already took 7% as the long-run rate.
dep_escalation	0.02	per year	2026-08-09	Constructed: escalation on the existing depreciation base, reflecting ordinary additions to the plant already in service
design_urea_tpy	574,875	tonnes/year	2026-08-08	Constructed: 1,575 t/day contractual plate times 365 days
dio	165.2475	days	2026-08-08	Constructed: FY2024/25 inventory over cost of sales
dpo	83.1716	days	2026-08-08	Constructed: FY2024/25 payables over cost of sales
dso	26.7747	days	2026-08-08	Constructed: FY2024/25 receivables over revenue
expected_depreciation	0.0449	ratio	2026-08-09	Constructed: the central bank's LONG-RUN 5% target against about 2.4% in the United States, on the same relative-purchasing-power identity the study states. CORRECTED 9 August 2026: the study previously asserted 4.5% flat while stating a derivation that produces a different number in every year. The wedge is now computed from the identity rather than asserted, and the currency path is built from it year by year.
export_tonnes_FY2425	350,318	tonnes	2026-08-08	Constructed: note 20 export revenue divided by the auditor's disclosed average export price of US\$385/t at an average rate of 49.0 — reconciles to 350.3kt
export_usd_FY2526E	505	US\$/t	2026-08-08	Constructed for the FY2025/26 bridge year: Study-year export price: the auditor's disclosed first-quarter increase of 43% on the FY2024/25 realised price, moderated toward the forward curve, from the nine-month reviewed accounts and the disclosed quarterly detail
export_usd_path	530, 530, 530, 530, 530	US\$/t	2026-08-08	Held FLAT in nominal dollars at the opening level. No forecast of a traded commodity price is defensible, which is the convention this house applies to the same class of input elsewhere; the previous path fell 17% over five years on a construction nothing sourced.
export_usd_path_bull	560, 545, 530, 520, 515	US\$/t	2026-08-08	Constructed: upside export price path: urea holds nearer the August 2026 quote.
fa_avg_age_years	4.4544	years	2025-09-24	DERIVED BY IDENTITY, labelled as derived: accumulated depreciation over the year's own charge. Under straight-line depreciation accumulated equals age times charge, so the ratio is the charge-weighted average age of the base. THE THREE CONDITIONS THAT BREAK THAT IDENTITY ARE CHECKED AND CLEAR HERE. There is no residual value: the policy note writes off cost over the useful life and mentions none. No useful life has been reassessed: the disclosed rates are unchanged from the prior year's identical table. And the base was not assembled by acquisition — it is one plant, built and extended by this company. The corroboration is that only EGP 220mn, 1.3% of the base, is fully depreciated and still in production, so almost nothing is past its accounting life and the gross-over-charge life below reads close to a true weighted life rather than a longer economic cycle. 4.45 years against the 11.04 that half of that life would assume: this plant was rebuilt recently and has another complex still under construction.
fa_life_implied_years	22.0702	years	2025-09-24	DERIVED BY IDENTITY, labelled as derived: the depreciable gross cost — cost less land, which is never depreciated — over the year's own charge. It is the replacement cycle the accounts themselves run, and it sits inside the disclosed range: note 5-2 gives 3.95% on the urea and ammonia machinery

				(25.3 years), 9.5% on the factories (10.5), 6.5% on the workshops (15.4), 6% on the factory buildings (16.7), 2 to 5% on the residential city and the water and sewage pipes (20 to 50) and 4.75% on the intangible (21.1). A weighted life cannot be read off the note because it publishes no class balances, so the identity supplies one and the disclosed range is what checks it.
fx_terminal_wedge	0.0254	ratio	2026-09-01	DERIVED: the steady-state currency depreciation the terminal inflation (5%) implies against long-run US inflation (2.4%) on the relative purchasing-power identity — the same wedge that carries the dollar debt in the terminal year. RE-SET 1 September 2026 from a typed 2.5% so that the terminal currency, the terminal cost of debt and the last explicit year share one number.
g_terminal	0.07	ratio	2026-08-09	Terminal growth from the house macro path: terminal inflation plus a STATED real growth of zero, so the real assumption is written down rather than inferred from the gap to the discount rate. It was 5% (+/-2) for Q4 2028. CORRECTED 9 August 2026 after external critique: the study previously used the 7% Q4-2026 target, which expires one quarter after the anchor date, as a perpetuity anchor -- and then defended it by calling 5% 'below the target', inverting the central bank's own target structure. A perpetuity takes the longest-horizon target there is.
g_terminal_alt	0.03	ratio	2026-09-01	Constructed: the alternative terminal growth rate: two points below the terminal inflation of 5%, which is negative real maintenance growth. RE-SET 1 September 2026 from 5% (which had become identical to the base case once terminal growth moved to 5%).
gas_m3_per_t_ammonia_modelled	1,292	m3/t	2026-08-08	Constructed and FLAGGED: implied by setting gas at three quarters of the single disclosed materials line; inside the auditor's own disclosed 1,025-1,771 range
gas_realised_usd_mmbtu	4.68	US\$/mmBtu	2026-08-08	Constructed: the company's own Q1 disclosure values 31,313,235 m3 of lost gas at EGP 251m, or EGP 8.016/m3, which converts to about US\$4.68/mmBtu at the prevailing rate — below the US\$5.75 contract price, which the study carries as its downside case
gas_share_of_materials	0.75	ratio	2026-08-08	Constructed and FLAGGED: the statements give a single materials line and do not split gas from the rest. Gas is set at three quarters of that line, which implies 1,292 m3 per tonne of ammonia — inside the auditor's own disclosed 1,025 to 1,771 range. This is the largest modelled allocation in the study.
kd_local	0.194	ratio	2026-08-08	Constructed: EGP 96,896,001 of interest on the EGP 500,000,000 holding-company facility drawn in FY2024/25 — the company's own latest local borrowing
kd_usd_lt	0.09	ratio	2026-08-08	Constructed: long-run corporate dollar cost of debt
kd_usd_nominal	0.117	ratio	2026-08-08	Constructed: EGP 1,338.0m of FY2024/25 interest on a mean dollar balance of about US\$233m
lens_weights	0.45, 0.2, 0.2, 0.15	ratio	2026-09-01	RETIRED — this series no longer averages its methods — and consumed by nothing. It is kept in the register so a reader of the 01-09-2026 edition can see what changed, and it is recorded here as retired rather than deleted because a number that was published once should stay traceable. THE CENTRAL IS THE CLASS PRIMARY -- the cash-flow lens, which on this company is two-sided -- and every other lens is a cross-check published beside it, never weighted into it. What follows is the description of the retired construction, kept verbatim: Weights of the four lenses in the weighted central the 01-09-2026 edition published inside its field: cash flow with the programme carried through 45%, relative multiples 20%, normalised earnings 20%, book value 15%. SET IN THIS EDITION (1 September 2026): the 08-08-2026 edition published the field alone, with no central and no weights. Basis: the cash-flow lens is the primary lens and the only one that charges the capital programme, so it carries the largest weight; its carried-through side enters because that is the company's own stated plan, and the stopped side is published beside it as the contested judgement, never averaged in; the relative and normalised lenses are cross-checks at equal weight; book value, which prices what has been paid for rather than what it earns, the least. The bear and full readings are the low and high of the field across every lens, never the weighted extremes.
local_free_p_FY2526E	22,000	EGP/t	2026-08-08	Constructed for the FY2025/26 bridge year: Free-market price for the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
local_free_parity	0.9	ratio	2026-08-08	Constructed: local free-market urea clears at about 90% of export parity, implied by the FY2024/25 note-20 local revenue net of the subsidised and nitrate legs
local_free_path	40000, 41000, 42000, 43000, 44000	tonnes	2026-08-08	Constructed: local free-market volume path from the 37.1kt implied for FY2024/25.
local_free_price_FY2425	18,485	EGP/t	2026-08-08	Constructed: export parity at the FY2024/25 realised price and rate, times the 90% local clearing

				ratio
local_free_t_FY2526E	40,000	tonnes	2026-08-08	Constructed for the FY2025/26 bridge year: Free-market volume for the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
local_free_tonnes_FY2425	37,085	tonnes	2026-08-08	Constructed: note 20 local revenue less the subsidised leg, divided by the implied free-market price
maint_capex_pct	0.0112	ratio	2026-08-09	Maintenance capital expenditure as a share of revenue, RE-ANCHORED 9 August 2026 on the company's OWN pre-project cash-flow statements: EGP 123.3m spent across FY2021/22 and FY2022/23 on EGP 11,052.9m of revenue. The first issue of this study used a 3.0% mature-plant standard instead, which is 2.7 times what this company has ever spent to keep its plant running, and which no disclosure supports. The replacement-rate framing (gross fixed assets at the disclosed 3.95% machinery rate, 6.11% of revenue) is carried as the published alternative and as the downside case.
maint_capex_pct_observed	0.0112	ratio	2026-08-09	Constructed: the two clean PRE-PROJECT years pooled — EGP 123.3m of capital expenditure on EGP 11,052.9m of revenue. This is what the plant costs to keep running when it is not building anything, from the company's own cash-flow statements.
maint_capex_pct_replacement	0.061	ratio	2026-08-09	Constructed: gross fixed assets at the disclosed 3.95% machinery depreciation rate, over first-forecast-year revenue — replacement-rate maintenance, the upper framing of the same driver
mmbtu_per_m3	0.0353	mmBtu/m3	2026-08-08	Constructed: standard gross calorific conversion
nh3_per_t_an	0.43	tonnes	2026-08-08	Constructed: ammonia per tonne of ammonium nitrate through the nitric-acid route plus direct neutralisation
other_rev_FY2526E	120	EGP m	2026-08-08	Constructed for the FY2025/26 bridge year: Other revenue for the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
other_rev_path	140, 152, 163, 174, 186	EGP m	2026-08-08	Constructed: merchant nitric acid, the ferrosilicon plant's rent and services.
prod_urea_FY2526E	520,000	tonnes	2026-08-08	Constructed for the FY2025/26 bridge year: Nine months reviewed output extended on the fourth-quarter run rate, from the nine-month reviewed accounts and the disclosed quarterly detail
q4_runrate_haircut	0.97	ratio	2026-08-08	Constructed: the fourth quarter of FY2025/26 is run-rated on the third quarter's revenue with a 3% haircut for the summer gas curtailment the company discloses every year
real_rate_lt	0.035	ratio	2026-08-08	The house real-rate convention, used to build the terminal risk-free rate from its own components rather than from a spot yield
roc_terminal	0.18	ratio	2026-08-08	Constructed: terminal return on invested capital, which sets the terminal reinvestment rate as growth divided by return on capital
subsidised_p_FY2526E	6,720	EGP/t	2026-08-08	Constructed for the FY2025/26 bridge year: Administered price for the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
subsidised_p_path	7,526, 8,429, 9,272, 10,106, 10,915	EGP/t	2026-08-08	Constructed: administered subsidised price path from the EGP 6,000 cooperative supply price.
subsidised_t_FY2526E	150,000	tonnes	2026-08-08	Constructed for the FY2025/26 bridge year: Subsidised deliveries for the study year on the revised quota schedule, from the nine-month reviewed accounts and the disclosed quarterly detail
subsidised_t_path	155000, 160000, 165000, 170000, 175000	tonnes	2026-08-08	Constructed: subsidised delivery path. The company met 147kt of a 322kt requirement in the fourteen months to August 2025, a 46% compliance rate the forecast does not assume away.
subsidised_tonnes_FY2425	126,000	tonnes	2026-08-08	Constructed: the auditor's 147kt delivered over fourteen months, annualised
urea_util	0.913, 0.922, 0.93, 0.939, 0.948	ratio	2026-08-08	Constructed: utilisation path. Audited output ran 586.4kt in FY2022/23 (2% above plate), 521.9kt in FY2023/24 and 513.4kt in FY2024/25; the path never returns to plate because the summer gas curtailment is structural.
usd_egp_FY2526E	49.6	EGP/US\$	2026-08-08	Constructed for the FY2025/26 bridge year: Average rate across the study year, from the nine-month reviewed accounts and the disclosed quarterly detail
usd_egp_avg_FY2425	49	EGP/US\$	2026-08-08	Constructed: the rate that reconciles note 20 export revenue to the disclosed export price and the implied export tonnage

usd_egp_path	53.49, 55.89, 57.85, 59.32, 60.83	EGP/US\$	2026-08-08	DERIVED, not typed: the spot rate carried forward year by year on the relative purchasing-power identity $(1 + \text{Egyptian inflation on the path above}) / (1 + \text{long-run US inflation})$ — the same identity that carries the dollar debt at local-equivalent cost. The 08-08-2026 edition typed a 4.5%-a-year path beside a derivation that produced a different number in every year; the register now carries the derived path itself.
--------------	--------------------------------------	----------	------------	--

The judgements, and what would overturn each

Judgement	What was decided	What would overturn it
The valuation lens	Free cash flow to the firm with a volume-times-price driver tree, because the revenue note and the balance sheet show a single operating business with no lending, rental or fee leg	A disclosed second segment of any size, or a change in the asset mix that made the balance sheet something other than a plant
The contested judgement — the capital programme	Computed BOTH ways and published side by side rather than averaged, because the two differ by EGP 3.53 a share	A dated commissioning schedule with a disclosed nameplate, which would collapse the two cases toward one
The gas share of the materials line	Three quarters of a single disclosed materials line, implying 1,292 cubic metres a tonne of ammonia — inside the auditor's own disclosed range	Any disclosure splitting that line, or a stated consumption rate
The new complex's nameplate	Derived from the ammonia design plate less urea's draw at its own plate	A filing stating the capacity, which no filing currently does
The cost of capital basis	The sovereign's own yield less its own default spread, with a country-loaded premium added back once; both premium bases published	Evidence that Egyptian equity risk clears below its sovereign, which would revalue every Egyptian equity and not only this one
The dividend assumption	Zero, sourced from two consecutive appropriation statements rather than assumed	A distribution proposed in any future appropriation statement
The terminal growth rate	The central bank's medium-term inflation target — nominal maintenance growth with no real growth assumed	A demonstrated ability to grow volumes, which needs gas the country does not currently have

Negative results — what was searched for and not found

What was sought	Where	Outcome
An investor presentation or earnings-call transcript	The company's investor-relations portal and open search	None exists. The company publishes filings and disclosure reports only, so the volume, price and utilisation data such material normally carries was taken instead from the statutory auditor's own tables
A stated nameplate capacity for the new complex	All four audited years and all three interim filings	Not disclosed. The capacity used is derived and flagged as derived throughout
A maintenance capital-expenditure guide or investment plan beyond the project	Board reports inside the filings, and open search	None found. Maintenance capital expenditure is set at a mature-plant standard and sensitised
Separate audit reports for FY2023, FY2024 and FY2025	The portal's audit-reports section	That section holds only audit-committee reports and its newest item covers the period to 31 December 2021. The statutory auditor's reports for the years used are bound inside the annual statements themselves
Official treasury-bill auction results	The central bank's auction pages	Blocked to automated access. Secondary market quotes are carried instead, used for context only, and no valuation figure depends on them
The exchange's own stated share count	The exchange company page for the listing	Behind a bot challenge that refused every automated read. The share count is taken from note 14 of the audited statements instead

Where a widely quoted third-party figure disagreed with the filings

Figure	What third parties showed	What the filings show	Which was used
--------	---------------------------	-----------------------	----------------

Shares outstanding	One widely visible market page reported 197.95 million shares, inconsistent with its own market-capitalisation figure by a factor of ten; a stale exchange listing document showed 394,042,710 shares	1,986,578,999 shares of EGP 5 par, paid-in capital EGP 9,932,895,000, note 14	The filing. The stale document predates the capital increase
Fiscal-year convention	Several sources present results on a calendar-year basis	The financial year ends 30 June; every statement is dated accordingly	The filing
FY2023/24 profitability	Reported net profit of EGP 2,537.9 million is widely quoted without qualification	That figure includes EGP 2,034.6 million of one-off investment-property revaluation gain	The underlying figure, used for every margin and return in the study

7. How a reader can check this study

Every historical figure in the study appears in the accompanying workbook on the sheets marked historical, carried exactly as issued. Every forecast figure is a formula on those sheets, driven by the assumptions sheet, and each assumption carries its source in the adjacent column. A reader who disagrees with an assumption can change it and watch the valuation move; the two grids that do not redraw are labelled on their own sheets, because each of their cells is a separate run of the whole model.
